VOL. LI. NO. 27.

DES MOINES, IOWA, JULY 5, 1906.

WHOLE NO. 2555.

THE FAT SOIL.

A Kansas subscriber sends the following communication:

Men ought to learn a great many important lessons relating to agricultural affairs from observation. The climatic conditions of no two seasons are alike, but, no matter what the conditions are, each season is charged with a great many important problems which must be solved by the man who tills the soil. In school and college affairs they have their graduation exercises, and I suppose these are necessary. The farmer, however, never graduates, and indeed I sometimes think that he always remains an underclassman.

But I must say what I had in mind when I started out. I wanted to call attention to the great difference in the character of crops that are grown on soils that were exactly alike, a few years ago, but have been farmed differently in recent times. We were pinched a little for rainfall in this locality during the latter part of May and the fore part of June. Things are relieved now, but we were really frightened. The lack of rainfall revealed unmistakably who were the good farmers in my county and who were the poor ones. Take the meadows, for example. Those farmers who have been handling live stock and who have taken good care that all the manure was returned to the land have meadows this year that are almost up to the standard. I have in mind a number of instances where the yield of clover and timothy will be as much as one and a half, two or even two and half tons per acre. These well-cared-for soils certainly seem to have a larger supply of moisture than those that have been farmed heavily without any returns made. The crop on the good land was a dark green color and the growth apparently normal, just as if there had been sufficient moisture.

Now in my opinion the experience this year has brought out the difference between fat and lean land. I suppose that the soil is richer in fertility elements where we find the good crops growing, but I take it for granted that part of the rank growth is due to the fact that the rich soils have greater ability to retain moisture. The humus material in the soil no doubt imparts this power. In some cases poorly farmed lands will not produce enough hay to pay for the cutting, and yet twenty-five years ago the two kinds of soil that I am speaking about were identically the same. Surely here is a lesson that every grain farmer should take to heart. The end desired can only be accomplished by consuming most of the grain that is fed on the farm and by saving carefully and returning to the soil all the manure that is made.

No doubt all of our readers have witnessed the things this year that are pointed out above by this subscriber. The real productive ability of land may be accurately estimated by examining the hay crop. Where it has been farmed heavily so that the humus material has become exhausted, as well as the fertility supply, a short hay crop will result, while, on the other hand, if manure has been added from time to time one will always be surprised at the remarkable ability of such soil to produce even under conditions that are not highly favorable.

We take it for granted that every man in the corn belt does his very best in his efforts to keep his land fat. At the same time some of us forget that humus-making material must be present in the soil if the fertility elements are to be liberated, and we are only reminded of our forgetfulness when our crops take on a pinched appearance while the other fellow's keeps up to par.

VALUE OF CLOVER HAY IN STEER FEEDING.

The Indiana station has recently marketed a bunch of steers that were fed 180 days to test the comparative value of a ration composed of ear corn and clover hay and one of ear corn together with shredded fodder and oat straw.

The steers fed clover hay along with ear corn made an average daily gain of 2.01 pounds during the entire feeding period, and sold at the end of the experiment for \$5.35 per hundred. The steers fed shredded stover and oat straw made an average daily gain of 1.31 pounds

per steer, and sold at the end of the experiment for \$5.00 per hundred.

It required 999 pounds of grain to make 100 pounds of gain in the lot fed shredded fodder and oat straw, while 785 pounds of grain made 100 pounds of gain on the steers fed clover hay.

No stronger indorsement could be given in favor of clover hay as a roughage than is contained in the figures given above. This is specially true when it is fed in connection with straight corn. Corn, as all feeders are aware, is rich in fat-forming constituents, while as a matter of fact the fattening steer requires, if the best results are to be obtained, a higher percentage of flesh-forming elements than are found in corn.

Clover belongs to a family of plants

stock yards, but it makes an exceedingly satisfactory plan by which water is conducted into the home. A few strokes of an air pump daily where there is a windmill to raise the water will supply the family with all the water that is needed and conduct it to any room in the house. This means that the farm home can be made modern in every sense of the term, and that those who of all classes are entitled to the comforts and luxuries of life are really coming into possession of their own.

Manufacturers of air pressure tanks have learned in recent years that it is more difficult to retain air under high pressure than it is to hold either steam or water. This knowledge has led to an improved method of construction, and,

perhaps given off by the plants themselves or produced by bacterial action on the remains or excreta of plants. In a crowded room a person begins to feel drowsy, languid and his head begins to ache. We speak of these sensations, usually, as due to deficient ventilation, too little oxygen, the oxygen having been partly used up, and to an accumulation of carbonic-acid gas; but physiologists now believe that this is not the true explanation, but that the person suffers because there are gaseous emanations from the lungs that are deleterious to human beings. The plant is exceedingly sensitive to gases. On the streets of Washington one of the principal causes of the death of trees is leaks in gas pipes; every year hundreds and perhaps thousands of trees have to be removed, and the usual cause is a leaking gas pipe. The amount of gas is so small that it cannot be detected by the odor, but the influence of the gas on the roots is so pronounced that the tree suffers and is likely to die. It seems probable that the ventilation of the soil is not only to allow the air to enter but to allow gases formed in the soil to escape.

Furthermore, air must enter not only for the use of the root itself, but also to oxidize the organic matters given off by the plants—to preserve the proper sanitary conditions in the soil. Ventilation to remove noxious gases might increase the yield without affecting the fertility. Ventilation for the purpose of oxidizing organic matter might affect fertility itself.

Fortunately, in many of these matters the practical knowledge of the farmer is fully up to if not in advance of the scientist. For example, in the case of intertillage crops we all understand it to be an excellent practice to keep the soil stirred. Generally speaking, we have in mind the destruction of weeds, the conservation of moisture, and possibly in some instances we realize that our efforts are counting for much in introducing air to the soil, thereby aerating the roots. If, in addition, cultivation permits the escape of noxious gases that are given off by the plant roots or produced by bacterial action, nothing is added to our labors but something is added to our interest in the why and wherefore of crop production.

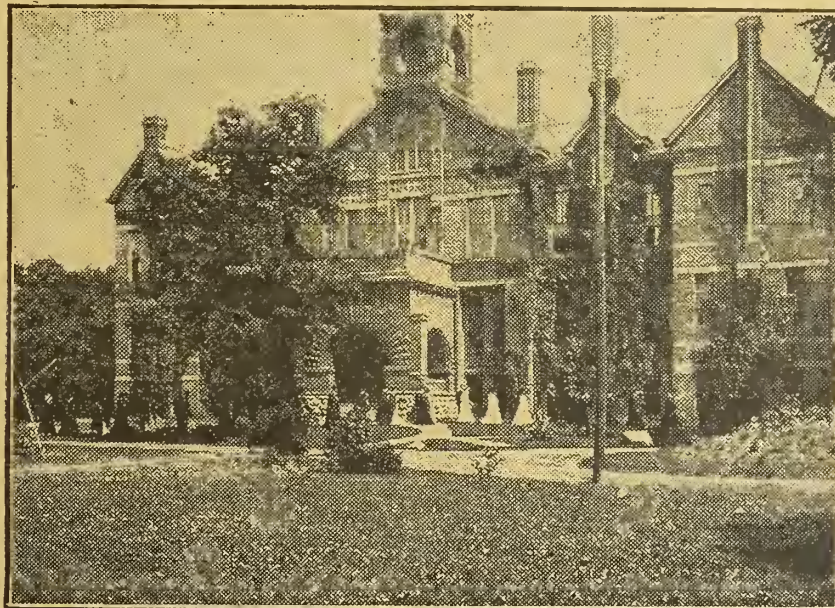

SOME DUTIES OF A SWINE BREEDER.

At the February meeting of the American Poland China Association the above subject was discussed by Mr. C. W. Court, of Marion, Iowa, who among other things said:

The first duty of the breeder, in order to have a hog to sell that will please the buyer, is to raise the kind of hogs that the trade demands. They should be strictly up-to-date in breeding, then fed on food that produces plenty of bone and muscle, given plenty of exercise, etc., in fact treated very much as if he intended to keep them for use in his own herd. After a hog leaves the breeder's care, his condition will very likely change; perhaps he will be turned out with twenty or thirty sows, perhaps shut in a small dark pen and fed corn and water, or perhaps given the very best of care according to the buyer's judgment and made so fat and helpless that his future usefulness is ruined, so that in order for a large per cent of the boar pigs that a breeder sells to prove sure breeders under the varying conditions which I have mentioned, they must have a constitution and vigor that is hard to overcome. I think it is a good plan for the breeder to tell the buyer just how his hogs have been fed and handled, then if he is so inclined he can give his pig very much the same care that it has been accustomed to have, or at least make the change gradually. When a breeder receives inquiries by mail he should describe his hogs as accurately as possible, and guarantee them as represented; if not as represented to be returned at the seller's expense and the purchase price to be refunded.

All boars should be guaranteed to be reasonably sure breeders. Failing in this, the breeder should be notified as soon as the fact becomes known to the buyer. Right here is where the trouble begins. You may sell a pig to a farmer, who perhaps takes him home and turns him out with a lot of sows, some of which will fight him while he is strange to them and his surroundings, and he will become shy and afraid of the sows, and the owner takes it for granted that the pig has no ambition and is no good, and he has a complaint to make right away, says, "he won't look at a sow," etc. Well, what are you going to do about it? Take him back, of course, and send him another pig or refund his money.

Another man will write you, or perhaps

Main Administration Building of Drake University at Des Moines, Ia. See page 15

noted for their richness in nitrogenous or protein products, and because of this it equalizes matters and thus balances the ration. The experiment referred to reveals nothing new, as every feeder in the corn belt endeavors, wherever possible, to secure a supply of clover hay. It emphasizes, however, the value of this crop, and the results suggest an inexpensive way of supplying the protein compounds.

WATER UNDER PRESSURE ON THE FARM.

The use of compressed air as a means of forcing water to where it is wanted involves an old idea, but the practical application of the idea has only been developed in recent years. The success attained during the last five years has permanently established the belief that the system of forcing water by the use of compressed air will extend until practically everyone who lives beyond the reach of the city and town water works will employ this means of distributing water.

The old plan of placing tanks on derricks in order to obtain pressure answered the purpose in a more or less satisfactory manner, but there were always difficulties to contend with. The new system means that the supply is kept where frost cannot penetrate and where windstorms can work no destruction.

Water under pressure is not only a convenient plan of distributing the supply through farm buildings and through

as we understand it, the modern tank is put out under a guarantee.

Those of our readers who have had experience in the use of these compressed air tanks as a means of forcing water are requested to give the results of that experience through these columns. It matters not whether the system has been a failure or a success, we desire to know its weaknesses as well as the points of merit.

THE BREATH OF PLANTS.

In an address delivered some time ago by Prof. Milton Whitney, of the national department of agriculture, the above subject was briefly touched on. Among other things Professor Whitney said:

All understand that the breathing of the plant is mainly through its leaves; but the soil also may be a very important factor in the breathing of plants, as it is necessary to have a supply of oxygen around the roots. Physiologists differ as to the office the roots have in regard to the absorption of oxygen. Whether it is a true breathing, the taking of oxygen for the plant economy through the roots as through the leaves, has never been decided; but it is unquestionably a fact that roots of cultivated plants require oxygen around them for their healthy growth. We know perfectly well that cultivation of the soil is important or necessary for the best development of many crops, and we say that it is in order to introduce oxygen and make possible the introduction of more water into the soil.

The investigations of the Bureau of Soils seem to indicate that the actual supply of oxygen to the roots may not be the only or even the most important function of cultivation. It seems necessary not only to introduce air into the soil, but by stirring the soil to permit the escape of noxious gases that are

visit your herd in person, and select the fattest, chubbiest pig in the lot, take him home and shut him in a small pen and stuff until he is ready to use him and then he surprised to find that his pig cannot serve a sow, even though he has plenty of ambition. What are you going to do in this case? Why, just take him back and send the money to the purchaser. Then there is another class of buyers. I don't know just how they treat their hogs, but I know a breeder who sold his herd hogs, a yearling, to one of this class of buyers, after using him in his own herd and proving him to be a sure breeder, and in about six weeks after he had sold the hog, he got a very ungentlemanly letter stating that the hog was no good, would not look at a sow, etc., and wanting to know what the seller proposed to do about it, claiming that the hog was guaranteed to work for him. The breeder offered to send him a young hog and take the old one back and the answer came something like this: "I would not have your young hog if you would give him to me; I want you to take this hog back and send me back my money." Now, what was the breeder's duty in this case? Why, just what the buyer demanded, which he did, and sold the hog to a neighbor who is still using him. I tell you, gentlemen, the buyer must be satisfied at any cost.

FINAL CULTIVATION OF THE CORN CROP.

BY P. E. CRABTREE, MISSOURI STATE CORN GROWERS' ASSOCIATION.

And now comes July with its attendant duties and pleasures. We can partially understand how a farmer, were he not pleasurably interested in his work, could consider the preparation of the ground and the cultivation of a corn crop an arduous task. Like the little boy when he was first told that he would have to dress and wash his face every morning of his life, the thought of it might discourage him. But as the boy later learned, each duty was intermingled with accompanying pleasures and there was a time for all; just so with the farmer. Each week has brought forth its special duties, and where we have cheerfully met them we have learned to enjoy our accomplishments, even before the fruits of our labors are ready to be harvested.

Perhaps our deepest consideration for the month is the final cultivation of the corn crop. By final cultivation, as here construed, we mean the last time that we can use the two-horse cultivator on this crop. If the ground was properly prepared and the first cultivation thoroughly accomplished we have had little trouble with weeds. The purpose of the two following cultivations was largely to prevent weeds that would have materialized and to have the surface soil loose and well supplied with the necessary moisture for this final cultivation. This latter should be accomplished when the moisture conditions are just right, neither too wet nor too dry. It pays the farmer well, to a certain extent, to be ready and waiting for this special occasion. If he has cattle or hogs to market, horse trading or horse breaking to do he should plan far enough ahead to see that it does not interfere with this one job. The importance lies in the fact that the soil must then remain undisturbed for so long that the utility development of the crop is during this long period, and that whatever is done in the way of securing the dust mulch for the retention of moisture throughout the extremely hot weather depends almost wholly on the condition in which this final cultivation leaves the soil. It should be deferred as long as we feel safe to chance the weather conditions previous to any danger of breaking down corn of rank growth that we may disturb germinating weed seeds as late as possible, and until the ground is well shaded with the crop and also to shorten the period of whatever harrowing or single horse work is to follow between the rows. By all means make the final cultivation of the field in the direction that best permits surface drainage, otherwise sooner or later before husking time flat parts of the field will suffer from an accumulation of water. The object should be to permit the ground to absorb all the water it will contain when drainage is thoroughly provided for and no more.

The condition I have just mentioned takes care of the surplus water. Now, as to the opposite condition. How can we best utilize the light shower and the quick, dashing, small rain? My plan is this. I prefer not to make a water shed of each row. Originally I was taught to ridge the row decidedly after the fashion of sweet potato ridges. Careful experimenting has changed my method long since. With the ridging process the small rain is carried rapidly to the trench between rows and there a sufficient quantity will accumulate to form a little rivulet and thus leave the field long before the surface soil has become

saturated. Then couple this condition with improper drainage and we have the doubly unfavorable conditions of "too dry on high grounds" and "too wet on low grounds," and both as a result of a shower that should have made the moisture conditions just right throughout. I endeavor to get just as nearly level cultivations as possible throughout the season except immediately in the row at this final cultivation. I can best describe the process by telling how I set the shovels. I use a six shovel cultivator. I set the shovels perfectly straight until this last time, when I used a pair of warped shovels slightly angled next the row, which throws up a small narrow ridge a few inches wide, but leaves the remaining middles very nearly level. This method I find secures the full benefits of the light shower or dashing rain and also leaves the middles in a splendid shape to be later agitated by means of the single horse expansion harrow.

Now, as to the purpose of that little narrow ridge. Notice the brace-roots that are thrown out one, two and three joints above the ground, depending on the fertility of the soil and on whether the variety of corn is a gross feeder. Those brace roots perform no office until they reach the ground, when they immediately throw out a perfect network of feeding rootlets and begin gathering fertility from the soil. I enjoy meeting them part way and setting them to work, hence, the purpose of the miniature ridge. I like to feed my corn crop. I admire the color of the field of corn that is abundantly supplied with plant food and furnished with sufficient moisture to hold said plant food in soluble form, thus making it continually available.

I enjoy seeing my plants develop as I enjoy seeing my animals thrive, and this final cultivation is one of the very important considerations. I make this cultivation shallow in order to avoid excessive root pruning.

FEEDING VALUE OF SPELTZ.

From time to time inquiries are received relating to the feeding value of speltz. Until recently very little information was obtainable on the subject, as few experiments had been conducted to ascertain its value.

The South Dakota station has been giving this new grain a trial in a steer-feeding experiment. Starting with steer calves weighing about 482 pounds, that station made an average daily gain of 1.69 pounds per steer until a weight of 1,209 pounds was obtained, the grain ration in this case consisting of speltz only. A similar lot fed corn weighed 480 pounds at the beginning of the experiment, and were marketed at a year and eight months of age weighing 1,277 pounds each, having made a daily gain of 1.84 pounds per steer per day. Thirty-three cents per bushel was realized for the speltz fed to these steers, while the lot fed corn realized forty-seven cents per bushel.

These results would indicate that there might be an important place for speltz in areas that are not specially adapted for the growth of corn. It certainly is an excellent record to make a gain of practically 1.7 pounds a day for a period of 431 days. Of course these steers were on grass during the grass season, but at no time were they fed any other kind of grain aside from speltz.

DETASSELING CORN.

The practice of detasseling corn has not been generally introduced. Some of the experiment stations have shown that this practice, if successfully carried out, will materially improve the yielding ability of corn. This has been strikingly shown by results obtained at the Illinois station.

The theory is that corn under normal conditions breeds more or less incestuously. In other words, a certain amount of pollen from one plant comes in contact with the silk of the same plant, and in this way the closest kind of inbreeding takes place. It is claimed that this results in impairing the vitality of the plant, and especially in reducing the yield. This is at least inferred by the fact that the yield per acre is increased by preventing this close inbreeding.

It is not advised that any man undertake to detassel much of his crop. This would be impracticable in the extreme. Generally speaking, detasseling is only carried out on a small scale. The best part of the field may be selected and al-

ternate rows detasseled, as well as the weak plants in the remaining rows.

Those who have never done any work of this kind scarcely realize the importance of having the work done at the proper time. When the weather is favorable tassels make their appearance rapidly, and sometimes a delay of twenty-four hours will be sufficient to shed much of the pollen. The area of corn handled in this way must be given attention every day for a period of a week or ten days. It is not a difficult matter to pull the tassel out of its socket, and this should be done in preference to cutting it off, as the latter causes the plant to bleed and consequently injures it. A short, sharp jerk will do the work without any injury whatever.

If the work is carried out successfully the seed should be taken in the fall from the rows that are detasseled. This means that such corn must necessarily be cross-bred, and because of this, when it is planted, the crop, it is claimed, will be more vigorous and yield better than would be the case with corn from the same field where no detasseling was done.

We do not advise every man to take up work of this kind, for the reason that it is almost labor thrown away, unless one has an excellent variety of corn to work on. It really comes in the line of those who are growing the so-called "pure-bred" corns. It might be possible to spend many years in improving an ordinary corn and yet not have it equal in quality and yielding ability to some of the improved sorts that are grown in the same locality.

STOCK FOUNTAINS ON THE FARM.

We sometimes think that little things are too often overlooked by those who attempt to give advice pertaining to farm affairs and that after all, these are the things that strike directly at the farmer's profit. It seems, of course, that all men know that live stock of every description should have access to water at will, and yet at the same time you will frequently find farms where ample provision has not been made for watering stock, notably hogs. We realize that this is a somewhat difficult matter, owing to the fact that the hog contaminates, wherever possible, the source of supply.

This leads us to remark that a modern drinking fountain that is attached to tanks or barrels will doubtless pay a larger interest on the investment required than any other device on the farm. The hog has a comparatively small stomach, and consequently must have water frequently. He ought to have just as clean water as the cows or horses, and up to date we have found that there is only one way to supply it, and that is by the use of these so-called fountains.

Even little pigs five and six weeks old will drink scores of times during the day in warm weather if they have access to one of these waterers, and no one will deny that this having water at will, will contribute to their thrift. The expense involved in placing these drinking fountains in pastures where hogs run is so small that no man, whether he keeps grade or pure-bred hogs, is justified in trying to get along without them. Where water is not piped into hog pastures we have found it to be exceedingly convenient to place one of these fountains on the side of a barrel and haul water in a second barrel placed on a stone boat or in a wagon. In this way one can often put in a supply that will last a day or two at a time and you are then assured that hogs will have their supply without any further attention from you. Where water is placed in the old-fashioned trough, no matter how it is covered, it is sure to be contaminated, and unquestionably a contaminated supply of

water is a source of disease. When a barrel is used to which there is attached a small fountain the water remains absolutely pure and clean. We realize that most of our readers who handle pure-bred hogs use these fountains, and what is said above is largely for the benefit of those who handle grade hogs and who have up to date not realized the great importance of having the water pure and the supply constant and easily available.

Treatment of Swine Diseases.

As soon as sickness appears among hogs the unaffected animals should be at once removed to clean, disinfected quarters, preferably without much range; for by running over pastures they may come in contact with contagion. Their feed should be carefully regulated and, if they have previously been on pasture, should include some green feed, roots, or an abundance of skim milk.

The quarters in which the sickness first appeared should be thoroughly cleaned, all bedding and rubbish burned, and loose boards and old partitions torn out and burned. If the pen is old, knock it to pieces and burn it. Disinfect pens and sleeping places, using air-slacked lime on the floors and the carbolic-acid solution on the walls and ceilings. Whitewash everything. If a hog dies burn the carcass or bury it deeply out of the reach of crows, buzzards, or dogs. If possible, do not move the carcass from the place where it falls; but if this cannot be done the ground over which it is dragged should be disinfected. Hog cholera bacilli can live in the ground for at least three months. Care must be taken to maintain an absolute quarantine between the sick and well hogs. The same attendant should not care for both lots unless he disinfects himself thoroughly after each visit to the infected hogs. Dogs should be confined until the disease is stamped out.

Treatment of hogs suffering from cholera or swine plague is not always satisfactory. This disease runs its course so rapidly that curative measures are more or less ineffectual, and prevention of an outbreak should be relied upon rather than the cure of sick animals. Dr. Salmon states that the following formula has been successful in less virulent outbreaks when properly administered as soon as signs of sickness are shown:

	Lbs.
Wood charcoal.....	1
Sulphur.....	1
Sodium Chlorid (salt).....	2
Sodium Bicarbonate.....	2
Sodium Hyposulphite.....	2
Sodium Sulphate.....	1
Antimony Sulphid (black antimony).....	1

These ingredients should be completely pulverized, and thoroughly mixed. In case there is profuse diarrhea the sulphite of sodium may be omitted.

A large tablespoonful once a day for each 200 pounds of live weight of hogs to be treated is a dose. The medicine should be thoroughly mixed with the feed, which should be soft, made of bran and middlings, corn meal and middlings, corn meal and ground and sifted oats, or crushed wheat, mixed with hot water. If the hogs are too sick to come to the feed, they should be drenched by pulling the cheek away from the teeth and pouring the medicine in slowly. Care should be exercised, as hogs are easily suffocated by drenching. Do not turn a hog on its back to drench it. (Department of Agriculture Bulletin.)

LAKE AND RAIL TRIPS.

During the summer months the Chicago Great Western Railway sells tickets via all steamship lines on Great Lakes in connection with their line to Chicago, or St. Paul and Duluth. From this time until September is the time to sail the lakes and see Duluth, Superior, Isle Royale, the Copper Range, Sault Ste Marie, Mackinac Island, Detroit, Toledo, Cleveland, Erie, Buffalo, Niagara Falls and other points of interest. Call or write for full information. E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

Farm Furrows

Turned by a Practical Farmer.

Why look for a June freshet? Just watch a man drinking from a jug—the most common June freshet.

When the thermometer gets up on its ear it is about time for the light hog to bound gracefully into popularity.

Sam says he has joined the humane society and he now rides a horse bare-back for fear he will hurt the saddle.

Did it ever occur to you that we were too prone to think of the virtues of our friends and talk about their faults?

Both the bulls and the bears are hiding in the corn fields of the West these days. They need to camp on the ground so as to find out the actual situation.

A report states that the British lamb crop is poor. Nature seems to conspire to prevent cheaper wool and mutton. In the meantime the sheep breeder is not finding fault.

It has been discovered that a good deal of the "Canadian cheese" comes from Indiana, but no one will dispute that limburger comes from Packingtown or the "Bad Lands."

While on a recent trip I observed that many horses would scare at automobiles, and it is not to be wondered at, for some automobiles are ugly enough to make a traction engine shy.

If our humane society would spend one-half the time investigating the fire cracker industry that is paid to looking after things they know nothing of, they would probably fill a long-felt want.

For many years I have delivered sheep at a local slaughter house and from what I am able to learn by observation there is room for a little able-bodied inspection of some of the local abattoirs.

One of the severest jolts a young, but ambitious breeder of live stock can get is to have a live stock judge at a fair devote six seconds to glancing at his stock and then spending a half hour placing the ribbons farther up the line. This is a habit some judges have fallen into.

Little Tommy did not like to work, and his mother thinking she would give him a lesson in industry called attention to the "busy bee," saying: "Look at the busy bee, it works from morning until night all summer long." "Well, it orter," says Tommy, "for it did not do anything all winter."

Abe Martin had a niece visiting him from the city and he was mean enough to tell her, when she asked what the bright brass knobs on the horns of the cow were for, "Ye see, we hev ter be kerful out here on ther farm, fer ther lightnin' sours the milk, an' those bright knobs on the horns are lightnin' rods."

I am in favor of a vigorous inspection of all the packing houses and the government should pay for it. Congress owes this to both the consumer and the producer. Some of the money spent in trying to keep sheep out of the forests could be devoted to this purpose and still there would be no loss to the forests.

In Michigan 140 farmers have organized themselves into a thrashing association and own their own rig. Last year this association paid a dividend of 5 per cent, besides saving its members \$600. Members are charged three and one-half cents for thrashing wheat and two and one-half cents for oats, being one-half cent less than the regular price charged in that state.

I have an aged jaybird on my premises and I have been watching his actions for many years. During the time I have known this chap he has been most vicious and I never saw him catch a worm or a bug until recently. Something or somebody has pulled his tail out and he seems to be mad at himself ever since. Recently he flew up into a hackberry tree close to where I was sitting and I saw him catch a number of worms that were feeding on the foliage of the tree. I know that we

have some troublesome birds that are really our friends.

A drop of oil in time will sometimes save a bearing in the mower or harvester.

A sensible man ought to have a good deal of charity and fellow feeling for a man who hasn't much sense.

The vacation of the farmer will be postponed until state fair time. One can then combine business and pleasure.

Nothing inspires a boy more than to be given a chance to earn some money. A double inspiration comes when he spends it.

It is a happy horde of potato bugs that happens to infest the vines of a farmer who will not have a farm paper in his house. They are perfectly safe.

Watch closely the merits of the hay loader this season so as to be able to determine whether it can be improved upon as an implement to rush haymaking.

Man has developed quite an appetite for land, and every nook and corner of the earth where there is a piece of land that can be had has a buyer or a homesteader.

When a three-year-old colt sells for \$40,000 it make a \$1,600 automobile look like thirty cents, and this is the way these new-fangled contrivances are going to down the horse.

An editor of one of our large daily papers told me that he recently drove ten miles in the country and passed a number of farm houses that would do credit to any city of 100,000.

I think the "Missouri mule" has a kick coming. Everything is measured by horse power in the mechanical world and the mule is left out in the cold. Consider the units of energy tied up in the hide of one mule, to say nothing of two. A well-brought-up mule is warranted by nature to pull anything with two ends.

The days of the cowboy and the bronco are near an end. It now appears that the rancher in some parts of the range country will have to give up his holdings to crop farmers. Cattle companies have been asked to remove their fences and the lands once occupied will be opened to settlement. Free range is growing scarcer each year.

Now comes a leading veterinarian who has come to the same conclusion that I have about the sweatpad. He says it is one of the worst things that can be used on a horse. He says they are just about as appropriate for a horse in summer as a pair of heavy woolen socks inside of cowhide boots would be for a man who has to walk all day in soft ground.

I believe all patent troughs that keep pigs from getting their front feet in the trough are cheating them out of a great deal of enjoyment. Really, a pig cannot thrive like he should unless he can get his feet in the trough. It affords the pig more pleasure than it does the man who is feeding them. But these troughs are all right just the same, and no farm should be run without a few of them.

A good deal of fun is poked at the farmer because he gets up early in the morning. Some of the results of early rising are manifest when we see such farmers prospering all along the line. I know that the sleep of the morning is very refreshing, but it must be cut out just the same. I once had a man working for me who said he had to work so late and get up so early for a previous employer that as he went up to bed he met himself coming down to begin work again.

Sam went to see a lawyer. "You see it is this way," says Sam, "no fence runs between Smoogle's place and mine. He claims that I encroach on his land, and I insist that he trespasses on mine. Now, what would you do if you were in my place?" "If I were in your place," replied the lawyer, "I'd go over and give Smoogle a cigar and have a drink with him and settle the controversy in ten minutes. But, as things stand, I advise you to sue him, by all means. Let no arrogant, domineering, insolent pirate like Smoogle trample on your sacred

THE NEW MOLINE THE IRONCLAD WAGON!!

Five hundred men, masters of the wagon-maker's craft, put the best efforts of their hands and brains into the making of New Moline Wagons.

With its gearing of select Hickory and tough White Oak and its box with Yellow Pine Bottom, grooved and matched, the New Moline Wagon has a foundation that will last for years.

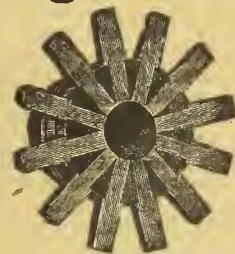

It's so strongly reinforced with extra heavy iron throughout, that farmers call it the "Ironclad" Wagon.

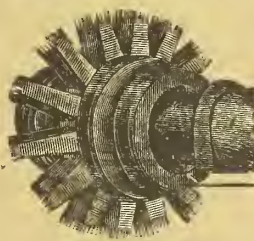

Pole, doubletrees, singletrees, gearing and box are so thoroughly protected and strongly braced with heavy ironing that its solidity and durability defy the test of time.

Its dust-proof skeins keep out every particle of dust and dirt.

Lightest Running Wagon in the World

Section Hub and Spokes. Practically One Solid Piece.

Note Dust-Proof Skein.

The New Moline is built right, from the ground up. It's a light-running Wagon, and the longer you use it the better you'll like it, for it's got more up-to-date features, and gives more years of satisfactory service than any ordinary wagon. We've been perfecting this wagon since 1854.

We fully guarantee every New Moline Wagon that leaves our works.

The demand for New Molines is enormous—taxing the full capacity of our immense factories.

GET THIS BOOK! We want every farmer to have a copy of our wonderful Wagon Book. It don't make any difference whether you are thinking of buying, or not—send for it anyway! It tells just how the genuine "Ironclad" Wagons are made. Shows all the parts SEPARATELY; and you can SEE how they are IRONED and BRACED and DOUBLY REINFORCED, making THE NEW MOLINE the most durable as well as the lightest-running wagon on earth. The book tells you more about a wagon than any other Wagon Book in existence. It is FREE, postage prepaid by us.

MOLINE WAGON COMPANY
MOLINE, ILL.

rights. Assert your manhood and courage—I need the money."

In these days of rush don't forget to be kind. I have seen men who always spoke more kindly to neighbors and even to strangers than to members of their own family. The good wife is likely working just as hard as you are, and needs more than ever your sunshine, instead of your shady, side. Put on the brakes when you find yourself getting grouchy.

HORSES DISEASED FROM PASTURING ALSIKE.

One of the experiment stations has undertaken to investigate the problem of alsike poisoning among horses and mules. It seems that a number of instances have been found where horses and mules became diseased when allowed to run exclusively on alsike pasture.

The skin in this disease becomes inflamed in certain areas, appearing at first as more or less rounded vesicular swellings, varying from one-half inch to five or six inches or more in diameter. The hair over the affected area stands erect and has a dull appearance, indicating loss of vitality. Later, the skin becomes hard and puffed out as the result of formation of pus underneath. Finally the deadened skin is cast off, leaving a deep, raw, angry-looking ulcer, which eventually heals with the formation of a conspicuous scar covered with more or less white hair. These changes in the skin are liable to appear on any part of the animal. Although the death rate is small from this trouble, yet the disease is said to have considerable economic importance in some localities, since it leaves the animal more or less disfigured, thus depreciating its market value.

According to investigations made up to date, the treatment of this disease is comparatively simple. As soon as it is recognized the animal should be removed from alsike clover pasture and the wounds subjected to antiseptic treat-

ment, such as frequent washing with coal tar disinfectants and the application to the ulcers of drying powders consisting of boric and tannic acid in equal parts.

DISFIGURING SKIN HUMOR.

Impossible to Get Employment, as Face and Body Were Covered with Sores—Cured by Cuticura.

"Since the year 1894 I have been troubled with a very bad case of eczema which I have spent hundreds of dollars trying to cure, and I went to the hospital, but they failed to cure me, and it was getting worse all the time. Five weeks ago my wife bought a box of Cuticura Ointment and one cake of Cuticura Soap, and I am pleased to say that I am now completely cured and well. It was impossible for me to get employment, as my face, head and body were covered with it. The eczema first appeared on the top of my head, and it had worked all the way around down the back of my neck and around to my throat, down my body and around the hips. I itched so that I would be obliged to scratch it, and the flesh was raw. I am now all well, and I will be pleased to recommend the Cuticura Remedies to all persons who wish a speedy and permanent cure of skin diseases. Thomas M. Rossiter, 290 Prospect St., East Orange, N. J., March 30, 1905."

LOW RATES TO CALIFORNIA AND RETURN.

From June 25th to July 7th inclusive, good to return October 31st, The Chicago, Rock Island Railroad will sell round trip tickets to San Francisco and Los Angeles at rate of \$56.25. Stopovers at and west of the Missouri river.

For full information, call or write 423 Walnut St., Des Moines, Iowa. Geo. R. Kline, C. P. A.

NEW ENGLAND AND CANADIAN POINTS.

The Chicago Great Western Railway will sell round-trip tickets to the above points at very low rates on certain dates this summer. It will pay you to call on city ticket agent, 514 Walnut St., Des Moines, Iowa.

THE HOMESTEAD

A Practical Journal for the Farmer,
Stockman, Fruit Grower, Poultryman,
Gardener and Housekeeper.

BY JAMES M. PIERCE.

JAMES ATKINSON, Editor in Chief.

ESTABLISHED IN 1855.

Entered at Des Moines Postoffice as second class matter

PUBLISHED EVERY THURSDAY.

SUBSCRIPTION RATES—Single subscriptions, \$1 a year; ten copies one year, \$10, and an extra copy to get up of club. In clubs of one hundred or more, 25 cents a year. Single subscription three years in advance, \$2; five years in advance, \$3; ten years in advance, \$5. Remit by draft, registered letter, postoffice or express money order. In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send the old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

THE MOST IMPORTANT MEASURES PASSED BY CONGRESS.

At the close of the first session of the fifty-ninth congress Speaker Cannon announced that during the session the legislation enacted exceeded in importance for the best interests of the people the work of any session during his thirty years of public life. Unquestionably the three most important bills passed at the session were the pure food, railroad and meat bill. The leading features of these bills have been summarized in a dispatch recently sent out from Washington, as follows:

PURE FOOD.

General Provisions.—Prohibits the manufacture, sale or delivery for shipment or to introduce into any state or territory or District of Columbia of adulterated, misbranded, poisoned or deleterious goods, drugs, medicines or liquors and imposes a penalty for any violation of the law.

Adulterations.—If drugs differ from standards in strength, quality, or purity, which are fixed in the national formula, they will be held to be adulterated. Confectionary will be declared adulterated if it contains any ingredient or coloring matter deleterious or detrimental to health. Foods will be considered adulterated if containing any substance injuriously affecting its quality or strength.

Preservatives.—Preservatives may be applied externally when directions for their removal are printed on the package.

Labels.—Drugs or foods will be deemed misbranded if falsely described by their labels. Drugs in packages must bear a statement on the labels of the quantity or proportion of ingredients. The word "Compound," "Imitation," or "Blend" must appear on mixed liquors.

RAILROADS.

Rates.—General provisions requires all interstate carriers to make through routes and reasonable joint rates. Makes oil pipe line companies, express companies, and sleeping car companies common carriers and subject to the law. Railways are forbidden from engaging in any other business than transportation. Pipe lines are excluded from this prohibition.

Public Rates.—Requires publication of all rates, fares or charges and forbids changes save on thirty days' notice. Jurisdiction is conferred upon the interstate commerce commission to hear complaints of unjust and unreasonable rates and to fix rates that are just and reasonable.

Rebates.—Rebates and other discriminatory practices are forbidden and subject to penalties.

Court Review.—Limited interview or orders or requirements of the commission may be made by the courts, but no injunction, interlocutory order or decree suspending or restraining the enforcement of an order of the commission shall be granted except after not less than five days' notice to the commission.

No Passes.—Free transportation is limited to certain specified persons. Interstate commerce commission is enlarged to seven members whose compensation is fixed at \$10,000 annually.

MEAT BILL.

Beef Inspection.—Before any cattle, sheep, swine or goats are taken into any establishment for slaughtering and preparation they must be examined while alive for any signs of disease, and if

such are found they are to be slaughtered separately and their carcasses given a special examination.

Tags.—All carcasses are to be carefully inspected and if sound, healthful and fit for human food will be tagged "Inspected and passed" and if not will be tagged "Inspected and condemned" and in the latter case must be destroyed in the presence of the government inspector.

Inspection.—Another inspection of carcasses or parts of carcasses may be had to see if the meat has become unfit for human food since the first inspection.

Labels on Cans.—Any meat or meat products put into can, pot, canvas or other receptacles must have a label attached to it under the supervision of a government inspector, who shall state the contents.

Sanitary Requirements.—All establishments which prepare meat for interstate or foreign commerce must be inspected by expert sanitary inspectors and kept in perfect sanitary conditions.

Right of Entry.—Government inspectors are given the right to enter any part of any establishment at any and all times.

THE ST. JOSEPH LIVE STOCK AND HORSE SHOW.

We desire to call the attention of our readers to an exposition which will be held this year for the first time at the Stock Yards, St. Joseph, Mo. It will be called the Interstate Live Stock and Horse Show, and will be held from September 24th to 29th, next. Premiums amounting to between \$10,000 and \$12,000 will be paid to exhibitors, and the announcement is made that it will be handled on the same broad lines as the American Royal in Kansas City and the International in Chicago. Arrangements have been made with the Western Passenger Association to extend reduced rates to St. Joseph during the life of the show, on the same basis as are made to other cities for similar occasions. The facilities for handling this proposition are unsurpassed, and the hearty co-operation of stockmen is solicited. Those desiring further information concerning this exposition should correspond with M. B. Irwin, General Manager Stock Yards, South St. Joseph, Mo.

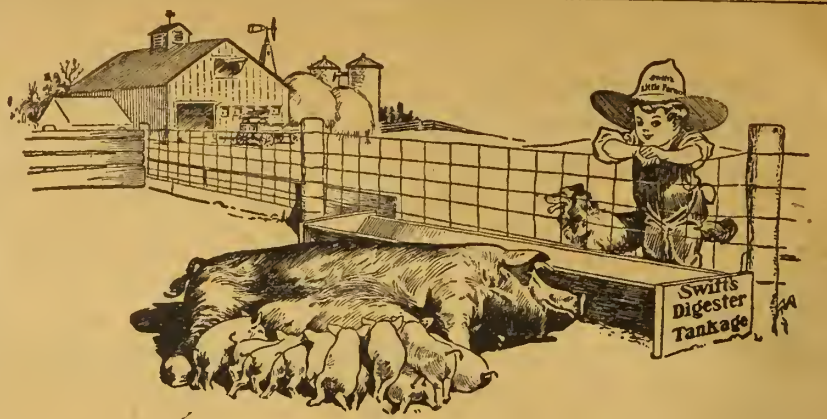

A CHANGE DESIRED IN JUDGING CORN.

The following communication has been received from Mr. S. J. Ramsey, of Washington county, Iowa:

Some time ago you submitted a plan involving a new method of judging corn, and I am free to say that your ideas coincide in detail with mine. Those who take part in corn contests at fairs, institutes, carnivals, etc., get very little satisfaction out of their efforts when they fall below the prize line. On the other hand, there would be some reward in knowing that even though you did not secure a prize you were close on the heels of the other fellow. In other words, there would be education, encouragement and satisfaction to all those who exhibited good corn if it could be scored by the judge. This would let every man know just where he stands in the contest.

The plan referred to by Mr. Ramsey contemplated the judging of corn at contests by the score-card method, and it was suggested that instead of using the old-fashioned method of first, second and third premiums that premium money be distributed pro rata and according to score. It was pointed out that injustice is frequently done men who enter good corn and who fail to carry away any premium, even though their exhibit may score within a quarter or half a point of the premium corn. We claim that all corns scoring above a certain mark should be considered in one class. For example, in a professional corn contest there might be a dozen samples that would score between 94 and 96. These might be so close in point of merit as to make it mere presumption on the part of the judge to distinguish. We have known instances where pretense was made at pointing out the difference between two corns when not more than one-quarter or one-half point existed between the scores. Such corn should be considered in the same class and should be given a pro rata division of a given premium.

The old-fashioned method of judging corn will eventually kill off the whole system of corn contests. As men become expert in the matter of improving corn they will refuse to take the arbitrary decisions of any judge based on imaginary distinctions. In many respects the judging of corn is very different from the judging of live stock. It frequently happens that a number of exhibitors come up with samples that were grown from the same supply of

Swift's Digester Tankage

—for Brood Sows and Litters

After farrowing, a Brood Sow needs concentrated Protein feed—rich in Phosphates. The young litters are then abundantly nourished.

It Starts Them Right

The first six weeks of the pig's life is all important. Pigs from sows fed on Swift's Digester Tankage begin life strong in Bone and Muscle and with heavy appetites which insure quick growth. Our Booklet "Protein for Profit" tells the story. Write for it.

Union Stock Yards CHICAGO

J. W. Pedigo Arrestor

Much study and experimenting has perfected the J. W. PEDIGO ARRESTOR.

For years the telephone was not seen in many homes because of the fear of lightning following the line wires into the house.

This latest device is one by which the same movement opens both the line and ground wires thus making an absolute disconnector outside of the house. It works equally well on ground bridging or metallic bridging lines. It is placed on the outside of the house near where the wires enter the house and is operated by a stem through the wall. When the storm approaches PUSH the button. When the storm has passed PULL the button. The COMB TEETH are protected from the weather; the ground line is open. Two very important features. To introduce the Arrestor NOW WHILE THEY MAY BE TESTED we make you a

price of \$10.00 PER DOZEN. THIS OFFER GOOD FOR A SHORT TIME ONLY.

Write to the INVENTOR J. W. PEDIGO, LUCAS, IOWA.

He Will Send You A Guarantee. AGENTS WANTED.

Binder Twine SPECIAL LOW PRICES

STANDARD TWINE, Plain Tag, \$8.47 per cwt.
STANDARD TWINE, Insect Prepared, 9.25 per cwt.
Above grades sold only on Catalog Terms, meaning Cash with order. Fall Terms, C. O. D., and other credit arrangements apply only on our Cricket Proof Brand as shown below.
PURE SISAL, "Cricket Proof Brand," \$9.75 per cwt.
PURE STANDARD, "Cricket Proof Brand," 9.75 per cwt.
PURE MANILA, "Cricket Proof Brand," 12.25 per cwt.
Every ball of "Cricket Proof" twine is sold under a registered Trade Mark. It is the highest grade obtainable, and the best value regardless of price, the only independent twine having an established market value, and rarely ever offered at reduced prices. Order direct from this advertisement, or send postal which will bring you by return mail samples, order blanks, etc. We have a reputation for prompt deliveries. Please mention Ad. No. 53.

COOPER CORDAGE CO. 4 Sherman St. | 310 4th Ave. S. | 1209 Union Ave.
CHICAGO | MINNEAPOLIS | KANSAS CITY

seed. It stands to reason that a careful selection of the crop would make their exhibits very similar in character. Consequently, when the resemblance is close there should be no attempt made to distinguish in the matter of merit. Our colleges should lead off in this work, because we have undoubtedly arrived at the time when some improvement should be made on the old system.

A farmer went to Salina, Kan., one day last week looking for harvest hands. Failing to find any he hunted up the city marshal and asked if there was any prisoners in jail. There was only one, a man who was working out a fine on the streets for being drunk. The farmer gladly paid the man's fine and started for the harvest field with him.

CURRENT EVENTS AND COMMENTS

There are rumors afloat concerning great changes that are likely to be brought about in the near future in the organization of the Standard Oil Company. The issuing of \$500,000,000 in stock beyond the present \$100,000,000 capitalization is contemplated together with a complete abandonment of the secrecy regarding earnings, expenses and other matters which have always been the company's avowed policy. Some of the directors of the company favor the plan of allowing salaried employees to become stockholders. This was done by the U. S. Steel Corporation with marked success, and the Standard Oil Company proposes to imitate the example.

Considerable stir was caused in New York City society circles last week by the shooting of Stanford White, a noted architect, by Harry K. Thaw, son of a Pittsburg millionaire. Thaw's remark at the time of the shooting indicated that his home had been broken up by the well-known architect. Mrs. Thaw was formerly an actress and a noted beauty.

The United States senate ordered the interstate commerce commission to investigate the grain buying and elevator trust. The resolutions directing the inquiry was offered by Senator La Follette, of Wisconsin, as a direct result of revelations made by wheat growers of the northwestern states and litigation between states over grain inspection.

A resident of Colorado Springs, Colo., who was a delegate from New York to the first national Republican convention more than fifty years ago, recently wrote a letter to President Roosevelt asking him if he intended being a candidate for the presidency at the expiration of his present term. In reply President Roosevelt told him that he would have to vote for some other Republican candidate next time. This is in accord with the announcement made by the president at the beginning of his present term, as he then stated that he would not be a candidate to succeed himself.

Promptly at 10 o'clock Saturday, June 30th, Vice-President Fairbanks in the senate and Speaker Cannon in the house declared the final adjournment of the first session of the fifty-ninth congress. This is the first time that congress ever adjourned on the day that closed the fiscal year. Other sessions have adjourned before and some after June 30th, but the fifty-ninth congress ended its first session on the day when the government strikes its balances and closes its books. Commenting on the work of the session, Speaker Cannon said that the legislation enacted in the session just closed exceeded in importance for the best interests of

the people the work of any session during his thirty years of public life.

The manner in which prices on finished hogs were sustained last week in the face of the agitation over packing house inspection was notable. The fact that a point within seventeen and a half cents of \$7 a hundred was reached during the week would make it appear that the supply of hogs in the country is not such as to injure the prospects for marketing the 1906 youngsters at good prices next fall and winter.

A new battleship was launched at Camden, N. J., June 30th. It is called the New Hampshire, and is a sister to the battleship Kansas, which was recently launched. It is 456 feet four inches long and seventy-five feet five and a half inches from beam to molding. It carries four twelve-inch, eight eight-inch, twelve seven-inch breech loading guns, together with twenty three-inch or fourteen-pounders.

DAY BY DAY

Agricola

Cherry picking is the order of the day. It matters not how large the corn field is or how bad the corn needs plowing, it and everything must give way to cherries. With us it has just commenced, for we took pains, "Woe worth the day!" (Scott) to plant lots of cherry trees and today they are full from "top to toe."

Then comes the raspberry, and, lo! they are bending with fruit. The same can be said of the blackberry. Foolish man that I am. I planted lots of them and they are full. You may judge of the prospect before us. The worst of it is that we can think of no excuse to go off visiting. We beg for the sympathy of everyone of our readers.

A nephew of ours, a lieutenant in the United States regular army stationed at Raleigh, N. C., is visiting us. He tells us that so far as he can see the country thereabouts is no farther advanced in its crops than we are in Iowa. He says, too, that the heft of the farmers do not seem to care whether the fertility is assisted, although in Raleigh there is a plant where fertilizers are manufactured. But the product is nearly all shipped.

The man who is above work, when work is needed, is a nuisance if he idles his time away. It is this class which furnishes the tramps and the majority of criminals.

The recent rain, which was heavy in these parts, is lengthening the oats and grass. It looked, before the rain, as if the oats would hardly be long enough for the binder to handle. It is all right now.

An enterprising cat is a murderer of birds. Our cat is such. It has just caught a yellowhammer about two-thirds grown. It has caught this spring, yellow birds, and wrens and meadow larks. Perhaps others. But it is death on rats and mice, so we tolerate it.

A meadow lark nested just across the road. There were five young ones and they all matured, escaped the cat and have gone to the meadow. The chimney swifts are nesting in the library chimney. They did last year, and more than one tumbled to the hearth. Then the parents come down occasionally, and we have to open the door for them. They don't seem much afraid of us.

A handsome lawn is very pleasant. But it should not be crowded with plants. Everybody, however, should have a lily bed. They are the queen of flowers, but moles are fond of a diet of them.

A couple of orchid cannas look well in a lawn. The individual flowers are

THINK IT OVER! WHY NOT?

WHY NOT use eight wheels on your farm wagon instead of four? Your answer will explain why four levers are not used on the Litchfield Spreader, instead of one.

Why not build your farm wagon eighteen inches higher than it is now built? The answer will tell you why we do not build the Litchfield Spreader so you will have to pitch the load over a four and one-half foot side instead of over a three and one-half foot side. It is because we want to save 20 per cent of muscle.

Why not drag your plow back and begin at the starting point of your furrow after you have plowed once across the field instead of plowing right on around? If you can answer this, you can also tell us why the Litchfield Spreader does not use a return apron.

When you are hauling a load on your farm wagon, why not hitch one horse to the load and the other horse to the wagon, instead of having both horses pull the wagon and the wagon pull the load? We will use your answer to explain why we do not drive the beater wheel of the Litchfield Spreader from one traction wheel and the conveyor from another, or why we do not drive the beater wheel from one point and the conveyor from another.

Why not build locomotives with wood wheels as they did long ago? Why not make the boiler of wood barrel staves? For the same reason that the old fashioned wood wheels are not used under the Litchfield Spreader.

Why not have an unremovable permanent seat on your farm wagon? For the same reason that the Litchfield Spreader uses a swinging seat.

Why not use narrow tires on your farm trucks? For the same reason that we do not use them on this machine in place of the widest spreader tires on the market.

Why do you use a sharp knife to cut a loaf of bread? For the opposite reason that we use a dull edge wheel to keep from cutting through the sod.

Why do we expect your order for a Litchfield Spreader? For the same reason that we look for your business covering our entire line—because we have the best, and knowing this, we do not hesitate to ask for that to which we are entitled. Tell us what you think and read the next chapter.

THE LITCHFIELD MFG. CO., P. O. Box A388, WATERLOO, IOWA

very interesting. The orchid family are natives of the tropics.

Every time we go down town we become disgusted with the big, soft maples. They are a coarse, dirty tree. Elms are far better. They do not grow very fast, but they get there all the same after a while.

The purple barberry is a pretty shrub. But Billard's spirea, with its huge white panicles, is magnificent. It is a native of Japan. Billard was a Danish naturalist.

Have just returned from an expedition to our corn fields and that of our neighbor's. "Well, W. J.," said we, "if the season is favorable from this on, what sort of a turnout of corn are we to expect?" "Oh," said he, "about sixty bushels to the acre."

If our neighbor is correct the Iowa corn crop will be a bumper. We shall not object. To have a half empty corncrib just after corn-gathering creates an uneasy feeling in the mind of the farmer. At least it does in ours. We hope to go through ours again, which will be the fourth time.

Peaches and plums on the trees continue to grow. We would not relish living in a land where peaches cannot be grown. We will continue our practice this fall; that is, to lay down a few trees. Doing this we are sure of fruit. Otherwise we are not.

One great trouble with our meadows, at least in southern Iowa, is the blue grass gets into them despite all that we can do. It is like ground ivy—creeping everywhere. The first thing we know it is all through the meadows.

The only thing we can do then is to start a new meadow and turn the old one over with the plow.

We read now of various gifts given by wealthy men of libraries and tracts of land, often with but one condition,

viz.: to name the park or building after the donor.

This is the way, they think, to insure them a lasting monument among men. The race hates the idea that death is annihilation. They long to live forever. To forestall any possibility of such an exit they donate money and buildings, etc.

The effort to live forever in the memories of one's fellows is commendable. We have colleges endowed, and professors provided for, hospitals the same and many other blessings.

They are doubtful of immortality through any other channel. They are in the fix of the celebrated Dr. Johnson, who, having been asked whether he believed in immortality, replied: "I should like a little more evidence."

So, to make themselves sure of even a little immortality they build colleges and library buildings and thus their money-bags become sources of benefactions to the people.

We wish someone would rise up and tell Agricola what it is makes the Russians hate and massacre the Jews. We are puzzled over the question.

A robin is sitting on the top of a telephone pole and singing with all its might, so we will close and listen.

\$3.50 FROM DES MOINES TO ST. PAUL, MINNEAPOLIS AND RETURN JULY 25TH,

Via the Northwestern Line, will apply for tickets limited to return until July 31st, inclusive, on account of Biennial Saengerfest of the Saengerbund of the Northwest, St. Paul, Minn. HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

The Kansas Farmer gives directions how to construct a concrete cave or outdoor cellar as follows: "A cement or concrete arched cellar can be made by making the excavation large enough to leave the walls and arch one foot in diameter. Temporary board walls are put in, one foot away from the earth walls, the space to be filled with concrete. If no broken stone is used and sand varying from fine sand to gravel is at hand, very good work may be done by using one of cement to five or even six of sand and gravel. The cribbing for holding the cement in place until it sets is important. It must be strong enough to bear considerable pressure. The diagram shows a cross-section of the cribbing suggested for our correspondent's cave. The interior height of the cave is seven feet. The under side of the roof is made on a seven-foot radius.

arched roof has set. It may be easily knocked out with a hammer, thus loosening all of the timbers. The pairs of rafters may be placed four feet apart. By making a cement floor, say two inches thick, such a cave may be made water and vermin-tight and will be practically fire-proof."

The following from the Twentieth Century Farmer is a description of a very good hog house: "The accompanying illustration shows a substantial and con-

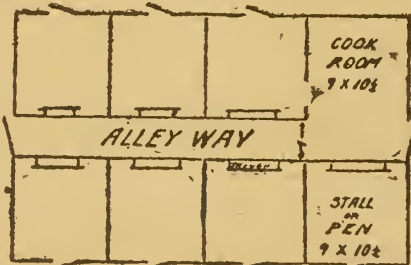

venient hog house. It is twenty-eight feet wide, forty feet long and eight feet high at the corners. It has an eighteen-inch stone wall, the stone being laid in cement. The floor is built of cement and should have a slope of about five to eleven inches in order to have it drained. It has a roof sloping both

Section of support to be used in making concrete cave. Joists and frame work to be removed after concrete has set.

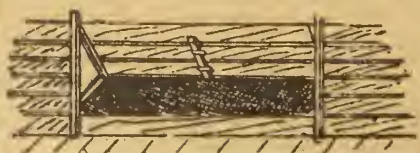

Should it be desired to make the cave higher the drawing may be considered as representing only the upper part. The side walls should be erected first. We have assumed that in digging the cave care will be taken to make the sides of the excavation true enough to serve as supports for the concrete. The walls may be made in sections. In this case the first section will be made about twelve feet long. The cribbing will then be moved and the side completed. It will be necessary to have enough 2x6x12 pieces to support an entire section of the roof. This will require joists enough to make the cribbing for a section on each side so that the method shown for bracing for the cribbing may well be used. The frame for the door will be put in place before the front end is built. The front end will require cribbing for both sides. In this case the 2x6 supports may be tied to each other by nailing 1x2 strips across at top, bottom and middle. After the cribbing is removed these may be driven out and the holes may be filled with cement mortar. After the sides and ends are completed the support for the arched roof will be erected. The diagram makes this plain. The 2x4 key shown between the ends of the rafters is important in the removal of the support after the

ways, which is covered with shingles. In each end it has doors 3½x6 feet in size. In each gable there is a small door immediately above the large door, opening into the loft. This loft is large enough to hold three or four wagonloads of straw, to be used as bedding. Above the loft door on each end is a window,

FLOOR PLAN OF HOG HOUSE.

which can be opened to ventilate. The interior is divided into an alley way four feet wide, extending the entire length of the building, and upon each side are four stalls or pens, into which the hogs are admitted. They enter through doors 2½x3½ feet, which open into the lot. Each pen is provided with one of these doors, so that the hogs can be separated and each bunch can get into the lot through the door from its own stall. The floor of the loft is eight feet from the ground floor and does not extend back to the roof on either side by about two feet. Through this space the bedding is thrown down. This space also provides for ventilation. The stalls in-

SECTION OF STALL.

side are about 9x10½ feet. The posts and boards used inside for partitions are all of oak. For feeding slops a substantial trough is made from two-inch plank, and immediately above the trough the partition is made into a hinged door, which swings above the trough and is held in place by a bar which slides. When the slops are being poured into the trough this door can be swung back and fastened by the sliding bar so that

OWN A HAY PRESS AND MAKE MONEY

We offer our well known Gem Full Circle 14x18 Steel Baler for only \$145.00 f.o.b. Quincy, cash with order. Each press is furnished complete with feed fork, wrenches, oil can, tie-making machine, lifting jack and full instructions how to set up and operate.

Nearly forty years' reputation for good Hay Presses is back of our guarantee. Ask anyone who has ever used one of our Gem or Victor presses what he thinks about it. Anybody in Quincy or who has ever bought from us will tell you you are safe in dealing with us. Write us today and get our Hay Press book and full information. We will gladly answer your questions without obligation on your part to buy from us. You owe it to your own pocketbook to get our book and learn all about our machines. You want the machine that will do the most work. The average output of our presses is 10 to 15 tons a day and we have many reports of 18 and 20 tons haled day after day by the same men and teams. Our power-head with its 9-inch trip lever arms affords two baling strokes to every round of the team and utilizes every pound of power. The automatic brake device saves the team from all jar and jerk of the plunger's rebound. The 30-inch feed opening and the long plunger travel enable the operator to put in large charges of hay without danger or undue haste. In every way our Steel Baler is the perfection of baling machinery; lowest price, greatest output and most easily and cheaply operated. Least expense for repairs because every part is made amply strong. Send draft for \$145.00 with your order and we will ship at once. If the press does not come up to our representations you may return it and we will refund your money and pay freight.

M, when the lever is released, stopping the machine quickly. I made all this myself, and it has been in use three years, so I know that it is a complete success. The shaft, H, is common seven-eighths-inch iron; the shaft, L, is common one-half-inch iron. I made the whole thing in less than a week, but spent no extra time on looks. Could not afford to. I would not advise making these things except that I know they have saved the time it would take me to make them over and over again. I believe in saving my wife and making her work as easy as possible."

A subscriber asks the Family Herald to give instruction for making a lawn swing. That paper gives the following: "A cheap homemade lawn swing may be made by following these directions, by anyone who is handy with tools: The posts at side are eight feet apart and batted to the side sill, which is ten feet long. A crossbar connects the same six feet up and six feet long; this slope will give strength to the frame. The crossbar to which the swing is suspended must be bolted on the inside of the legs. The cradle is swung by two straps of iron three-eighths by one and one-half

the different parts of the tub. Some never saw such a washer. It is about ten inches across, and is like an inverted funnel. Used like a churn dasher it does as good work as any washer could. We put a weight at E. G. is the wringer. The shaft, H, is moved an inch lengthwise by the lever, I, to engage or disengage with clutch, K, on the wringer. Simply pushing the lever from you, stops the wringer. N is a pulley fastened on the shaft. M is on the stationary shaft, L. When the shaft, H, is moved by the lever, I, the pulley, N, engages the pulley, M. The pulley, O, has groove and a belt from it to run the sewing machine. We only have a machine head. It sets up on the frame of the rigging described. Wife sits on a stool and works the lever with her knee. A weight running over a pulley brings the lever back. A piece of iron on the back of lever, I, rubs on pulley,

inches and four feet long, these straps to have holes punched in each end and swung from the inside of the crossbar above, and attached to the outside of cradle with half-inch bolts. The cradle to be three feet wide, giving plenty of room to swing clear of frame. The swing can be worked by a rope hanging from the crossbar overhead. The braces must be put in very solid. The whole material to be of 2x4-inch stuff—two pieces for side sills ten feet long, four pieces for corner posts nine feet long, two pieces for end of base eight feet long, two pieces for cross pieces on side above, two pieces for cross pieces on end above, four pieces 2x4 twelve feet long to cut into braces. The cradle can be made of inch timber of any design. The whole to be bolted securely together."

EXCURSION TICKETS TO OMAHA, NEB. Via the North-Western Line, will be sold July 10 to 13, inclusive, with favorable return limits, on account of B. Y. P. U. Apply to agents Chicago & North-Western R'y.

OUR DAIRY DEPARTMENT

All communication relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

THE OVERRUN IN CREAMERIES.

This subject is discussed by Professors McKay and Larsen in their recent work on butter-making. They say that the amount of overrun is the difference between the amount of pure butter fat and the amount of butter manufactured from that given amount of fat.

The calculation of the overrun in the creamery should be made, according to these authors, from the fat basis on which the patrons are being paid. If the fat is delivered in the cream the overrun should be calculated from the fat in the cream. The overrun calculated from the composition of the butter manufactured would not be correct, as there might be serious losses of fat sustained in the process of manufacture. It is possible that butter might show a high content of the substances not fat and yet not show a good overrun on account of losses, while butter containing only a medium high moisture-content might show as great or greater overrun on account of thorough and efficient work during the different steps of manufacture.

The amount of overrun depends on

four factors, namely, thoroughness of skimming, completeness of churning, general losses in the creamery and the composition of the butter manufactured. In creameries where the conditions of separation and churning are almost perfect the theoretical overrun may be quite accurately calculated from the composition of the butter manufactured. The amount of fat in buttermilk under favorable conditions should not exceed two-tenths of 1 per cent, and in skim milk it should not be more than one-tenth of 1 per cent. On this basis the authors give the theoretical computation of how much butter a thousand pounds of 4 per cent milk should make. There will be, to begin with, forty pounds of fat in the one thousand pounds of milk. A loss of one-tenth of 1 per cent of fat in the skim milk would leave thirty-nine and one-eighth pounds of butter fat. The additional loss in the butter milk would make a total loss of a little more than one pound, or, to be accurate, 1.075 pounds. This leaves 38.925 pounds of fat to be made into butter. If this butter on analysis proved to contain 82 per cent of fat, the total amount of butter made would be 47.47 pounds, the latter figure being obtained in the calculation by multiplying the total amount of butter fat embodied in the butter by 100 and dividing by eighty-two, because, as said before, the analysis in this case indicated that the butter contained 82 per cent of fat. This calculation shows that from the one thousand pounds of 4 per cent milk there was actually made 47.47 pounds of butter, or a theoretical overrun of 47.47 pounds, or 18.7 per cent.

DAIRYING ALL THE YEAR ROUND.

The Montreal Star in one of its recent issues presents a paper on the above subject by an Ontario dairyman, Mr. Hendricks. Among other things, Mr. Hendricks says:

Cheese, which is the principal output in our district, has been, all along, one to two cents higher than last year, and pastures, I never saw them better at this time of year. True, the spring was late, but owing to the mild winter, feed was plentiful, and it did not matter much that we were forced to stable our cattle a week or two later in the season than usual.

I keep thirty-five milk cows right along. I dairy summer and winter, and manage to have pretty nearly the same amount of milk at all seasons of the year. I send my milk to the cheese factory. Early in the season my milk netted me something like one dollar per cwt. at the cheese factory, which is about as high a price as I ever got.

Farmers, as a rule, depend too much upon pastures, and do not use enough of green feed or grain. I do not depend on the pastures for more than a month or two any season. I feed more or less meal to my milking stock every day in the year. Just now I feed very little. In fact I do not know that it pays to feed the meal now in the flush of the pastures, but my cows got so accustomed to receiving their grain ration, that it would be a great disappointment to them on coming to the stables to find no meal in their boxes. It pays, you know, to please the milk cow. Just now we are only feeding about a quart of meal, morning and evening. In a few weeks I shall have plenty of green feed, as peas, oats and vetches, to supplement the pastures when they began to fail in July. I give this green feed in the stable as I feed everything to my cattle. It is a great waste, of both feed and manure, to feed in the yard—or in fact in the pastures either. I have several sowings of peas, oats and vetches, coming in at different times through the summer, and when that is eaten up I shall have corn in plenty, sheaf-oats, etc. I have no silo, yet I grow lots of fodder corn and oats. Some of the corn I cut and shuck, and feed it to my cows well into the winter. I also store a quantity of sheaf oats (not oat hay) cut on the green side, and feed unthrashed. I consider well-cured sheaf oats, cut on the green side, one of the best milk-giving feeds. In my experience it is superior to clover hay or fodder corn.

I also feed large quantities of clover green and cured, summer and winter. My winter feed largely consists of clover hay, sheaf oats and fodder corn with meal feed. I sell my thrashed oats and buy mill-feed. This at first greatly surprised my neighbors who were not in the habit of drawing home wagon loads of sacked meal from the railway station. I grow the clover in the oats—that which I cut on the green side for feeding in the sheaf. I find my clover a pretty sure thing, grown this way, every year. I sow timothy with the clover in case of some of the clover failing.

My cows are not phenomenal milkers, but they are a pretty good average, and are getting better every year.

The daily milk yield from thirty-five cows is about 700 pounds. I first kept Jerseys largely, but as our factory does not believe in the Babcock test, I am getting into Holsteins now, which give a much larger yield of milk for a less butter fat content.

For a great part of the time this season my receipts have been seven dollars a day, from milk sent to the factory, which is satisfactory. I dairy all the year around. I do not believe in the way many farmers manage, that is dairy for a few months in the summer and then quit. There is no money in this kind of dairying. My receipts last year from my dairy was \$1,700.

The plan suggested above is undoubtedly the only practical method of realizing a satisfactory profit from a dairy herd. The average man of the corn belt,

Washed in 1 minute

Count the pieces—notice the difference—and you'll understand why the one who has to do the cleaning prefers the simple Sharples Tubular.

There are other advantages just as much in favor of the Tubular. Write today for catalog V-121—it tells you all about the gain, use, and choice of a separator.

The Sharples Separator Co.

A Very Lame Excuse

Is that offered by other Cream Separator concerns, when they tell you that even though they do not extract all the cream what they leave in is not wasted because it goes to fatten the pigs. This is a fallacy. Professor Haecker, of the Agricultural Department of the University of Minnesota, declares that there is as much food value in skim milk as in whole milk. Therefore, the cream remaining is wasted.

You prevent all this waste by using an

Iowa Dairy Separator

What you want is every particle of the cream, and this is exactly what you get with the "IOWA." Write at once for catalog 25 and full information, which will come free by return mail. Address,

The Iowa Dairy Separator Co., Waterloo, Iowa.

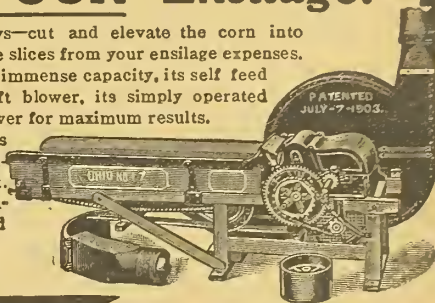

How About YOUR Ensilage?

"OHIO" Ensilage Cutters cut two ways—cut and elevate the corn into silo at an amazing speed; and cut off huge slices from your ensilage expenses.

How does it "cut" expenses? By its immense capacity, its self feed mechanism, its power-saving direct draft blower, its simply operated silage distributor, its minimum use of power for maximum results.

Silage as a milk and beef producer is far superior to grain. Our book "Modern Silage Methods" (10c) tells all about it. Our Ensilage Cutter Catalog will easily convince the man who wants the best. Send for it. Manufactured only by

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

RIPARIAN OWNERSHIP—CONFLICTING AUTHORITIES.

The editor of the legal department regrets that a mistake was made in answer to the question of a subscriber at Bellevue, Iowa, in the issue of May 31st, under the caption, "Land Bounded by River." The mistake consists in the assumption that the owner of land in Iowa which is bounded by the Mississippi river, or other streams actually navigable, has title to the fee in the ground to the middle of the stream, and hence controls the shore or beach down to the water line of low water, and can exact compensation for the use of such shore or beach, from any person who occupies it. This doctrine is recognized as the law in Connecticut, Tennessee, Ohio, Missouri, Illinois, Massachusetts, Maryland, Wisconsin, South Carolina, Maine, Michigan, Mississippi and New Jersey. In all these states, where land is bounded by a navigable stream, the owners' title extends to the middle of the stream, unless the tide ebbs and flows in it. But, it is not the law in Iowa, where the owner's title extends only to high water mark, and the shore or beach below that line belongs to the public. The owner has some rights on this shore or beach, beyond what are enjoyed by the public, but exactly what they are, is not clearly defined in the decisions of the courts. He has, however, no right to prevent persons from going thereon to fish, or to take sand or gravel, or perhaps to catch driftwood. The leading case in Iowa on the subject is "McManus v. Carmichael," 3 Ia., Sup. Ct. R. p. 1. In that case, the plaintiff owned land in Iowa bounded by the Mississippi river, and sued the defendant for trespass in taking two boat loads of sand and gravel from the shore, below high water mark. The court held it was no trespass, on the ground that plaintiff's ownership extended only to high water mark. Since then the supreme court of Iowa has announced the same views in a number of cases. A similar doctrine is held in North Carolina, Alabama, Kentucky, Kansas, Pennsylvania, New York and Delaware.

LAW QUESTIONS CONSIDERED.

INCORPORATING A COMPANY.

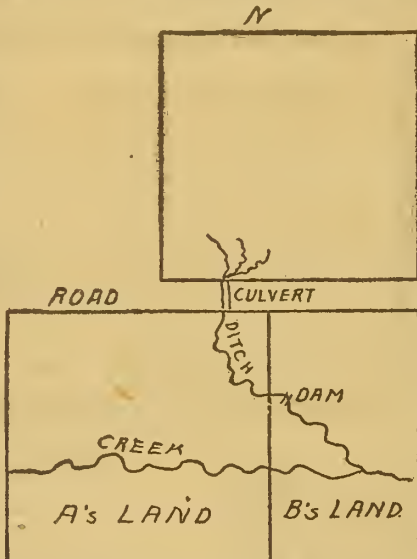

A Subscriber, Story City, Iowa.—(1) Give full directions for incorporating a farmers' telephone company in Iowa. (2) Must such a company deposit a certain sum in the office of the state treasurer when there will be no income from the operation of the company? (3) When there are only six men in the company can one man hold two offices to make the full set in filling out articles of incorporation?

Answer.—(1) Any number of persons may incorporate a company under the laws of Iowa. Proceedings to incorporate a farmers' telephone company do not differ from proceedings to incorporate any other ordinary company. When persons wish to incorporate a company they must first adopt articles of incorporation, which must be signed and acknowledged by them and filed in the

office of the recorder of deeds of the county where their principal place of business is to be. The articles are then forwarded to the secretary of state to be recorded there. Twenty-five dollars and fees for recording must be paid the secretary of state and he then issues a certificate of incorporation. Within three months thereafter the company must publish notice for four weeks in some newspaper near its principal place of business, containing its corporate name, principal place of business, and general nature of business, amount of capital stock, when paid in, etc., time of commencement and expiration of corporation; officers, and how and when elected; highest amount of indebtedness it will incur and whether private property is exempt from corporate debts. (2) Yes; the \$25 above mentioned. (3) Yes; that may be provided for by the articles of incorporation and the by-laws. After a certificate is issued the company ought to adopt by-laws, regulating the details of its operation.

DRAINAGE WATER.

A Subscriber, Elk City, Kan.—A and B own adjoining farms, north of which there is a public road. A ditch or waterway begins on land north of the road, runs south and crosses the road through a culvert, then runs through a corner of A's land and through a portion of B's land to the creek, as indicated in diagram attached. B claims that said ditch or waterway is not a natural waterway, as it carries water only after rains, and he has filled up the ditch on his

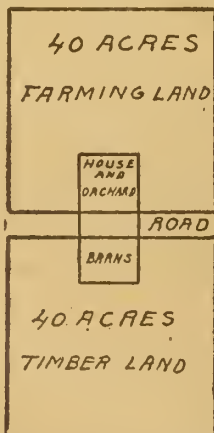

own ground at the division line. This results in damage to A's land. (1) Has B a right to stop the water at his west line, by filling up the ditch? (2) Has A a right to build a dike on his north line so as to stop the water from running through his land?

Answer.—(1) It is difficult to answer this question without having more information about the nature of the ditch or water way, than the above statement discloses. Upon general principles, a land owner in Kansas has a right to erect barriers against the flow of surface water coming from other lands—so if the water running in the ditch or waterway mentioned is wholly surface water, either A. or B. would have a right to stop it at his line, unless under such circumstances as would render it excessively injurious to the road, or the lands of others. The second question rests upon the same principles.

SETTING OFF WIDOW'S SHARE.

An Iowa Subscriber.—A died, leaving a widow and children, and a farm of eighty acres. The dwelling and other improvements are located as shown in the accompanying diagram. Will the widow hold forty acres as a homestead taken out of the center of

the farm so as to include the improvements, or will she have to take one-third of the value of the farm as her share? The other business relating to the estate of A. has been settled.

Answer.—The law provides that a widow's distributive share of her de-

NEW SHERIDAN HOTEL, So. Bend, Ind.
8,000 sq. ft. of Black Diamond laid over shingles.

recommended Black Diamond to neighbors and friends. Records of ten years and more of satisfaction prove the value of this veteran roofing.

Sample and Booklet mailed free on request.

Address the nearest office, BARRETT MANUFACTURING CO., Black Diamond Dept.
New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans and Cincinnati.

BLACK DIAMOND Ready Roofing

More rolls of Black Diamond Ready Roofing are in use today than of all other ready roofings combined.

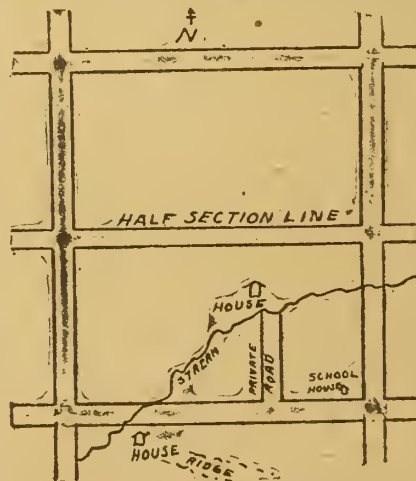

There's a good reason for it.

Black Diamond was the first good ready roofing to be put on the market, and it got a long start. It could never have continued and maintained its present supremacy if it did not have merit. Thousands of satisfied owners, whose testimony we have in our possession, have advertised and

ceased husband's real estate shall be set off so as to include the ordinary dwelling house given by law to the homestead, unless she prefers a different arrangement. When the widow's share cannot be set off, without detriment or injury to the portion remaining for the heirs the court will upon a proper proceeding, order the land to be sold and the proceeds divided—one-third to the widow, two-thirds to the heirs. This would probably be done in your case, if application is made to the court in the regular way.

CHANGING PUBLIC ROADS.

A Subscriber, Hebron, Iowa.—We have a public road running east and west on a half section line, and another road half a mile south, parallel to the first, which is a school-house line. We wish to close the road on the half section line and also the other road for about three-fourths of a mile west of the school house and establish a new road beginning three-fourths

of a mile west of the school house and running either along the stream or on a ridge to the road running north and south, all of which will more plainly appear on the diagram attached. The road by the school house and the road on the half section line are not very good. There is no house on the latter road, but two houses on the former, as indicated on the diagram. Can this be accomplished, and, if so, how?

Answer.—This means the vacation of two roads, and the establishment of a new one—three different proceedings but of the same nature. Each one requires a petition addressed to the board of supervisors filed in the auditor's office—a bond for expense in case change is not made, appointment of commissioner by the auditor to examine route and report, hearing of objections and claims for damages, final decision by board of supervisors. We think it advisable that a competent attorney be employed to conduct the proceedings. They are somewhat complicated.

DRAINAGE ON ANOTHER'S LAND.

Mr. J. T. Svenson, Gowrie, Iowa.—R., S. and J. own adjoining farms. A small slough or draw runs through the three farms, as shown on accompanying diagram. There is a pond on the northeastern part of S's land which he drained by a scrap ditch about eight years ago. Five years ago a railroad was built through the farms as shown on the diagram. The builders put the bridge over S's ditch on comparatively high ground, the dump or fill there being scarcely a foot and a half, while it is over four feet about twenty-five rods

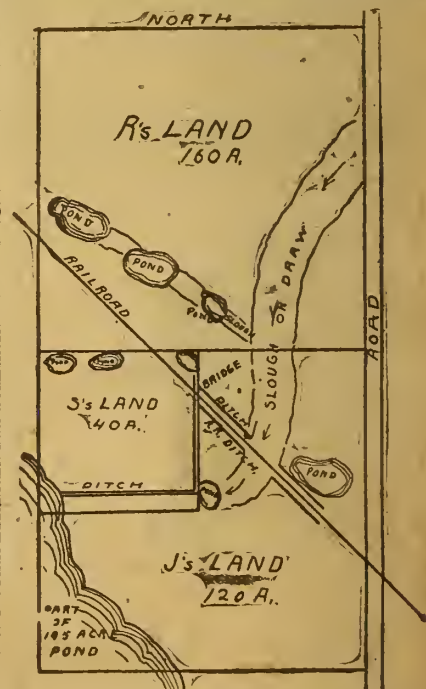

THE AUTO-FEDAN 3-Stroke Self-Feed HAY PRESS 2 Men Can Run It.

Satisfaction Guaranteed.

THE AUTO-FEDAN HAY PRESS CO.
1002 Jefferson St., Topeka, Kan.

to the east. The water now runs in the cut on the right of way to the bridge and then back along the railroad ditch to the original draw. R. claims he has permission of the railroad company to outlet his water at the railroad bridge. Can he force his

outlet water through the dry land of S. or J. without paying them compensation, or will he have to follow the original draw or slough?

Answer.—R. cannot lawfully force his drainage water through the dry land of either S. or J. He cannot do it even by paying compensation without their consent. If there was a natural depression from the bridge going through the land of S. or J. and leading into a natural water course, R. could outlet his water into it, without paying any compensation, but he cannot use the dry land of another for that purpose.

SPECIAL EXCURSION RATES TO COLORADO, UTAH AND THE BLACK HILLS, Via the North-Western Line. Beginning June 1st excursion tickets will be sold daily to Denver, Colorado Springs, Pueblo, Salt Lake City, Hot Springs, Deadwood, Lead and Custer, S. D., etc., good to return until October 31st. Bog Spavin

Cure the lameness and remove the bunch without scarring the horse—have the part looking just as it did before the blemish came.

Fleming's Spavin Cure (Liquid) is a special remedy for soft and semi-solid blemishes—Bog Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It is neither a liniment nor a simple blister, but a remedy unlike any other—doesn't irritate and can't be limited. Easy to use, only a little required, and your money back if it ever fails.

Fleming's Vest-Pocket Veterinary Adviser describes and illustrates all kinds of blemishes, and gives you the information you ought to have before ordering or buying any kind of a remedy. Mailed free if you write.

CONSULTING VETERINARIAN. Advice and prescription by mail, \$1.00.

VETERINARY MATTERS

PROFESSIONAL veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of \$1.00. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

KIDNEY TROUBLE.

I have some sows which are lame, and have difficulty in getting up; their water has the appearance of brick dust and water. They have been running on good clover pasture since the first of May and are due to farrow the last of the same month.

It is probable that acid fungi in clover are causing the trouble so that we would advise a change to grass pasture or rape. Physic sows with epsom salts in slop. If trouble continues give two drams of sanmetto twice daily.

LAMENESS.

A three-year-old mare came in from pasture last fall unable to step on her left hind foot, and leg was swollen to the stiffl. Could find no bruise or injury of any kind. When the swelling disappeared it left a small hard growth, scarcely noticeable, just above the hoof. She is not lame, but as she puts her weight on it you can see and hear it snap just on front and above hoof. Have given it no treatment. She is not broken and has been running out all the time. Please give me advice through your columns. She is doing very well without treat-

ment and will doubtless outgrow the injury. Without an examination we are unable to locate the cause of the snapping sound but it would more usually be in the stiffl than where you indicate. If it is the fetlock joint a blister might do good.

SPOILED UDDER.

A mare last summer had trouble with her udder, which swelled and little pockets formed which oozed a little matter. Had to wean the colt, but milked the mare two or three times a day as long as I could get any milk. Used peroxide of hydrogen and finally had veterinarian open it. Later another veterinarian cut out the affected part. It then swelled up on each side and pus pockets formed which ran continually a light, slightly ill-smelling matter. If opened it bleeds freely. Am using arsenic twice a week in pus pockets. It is quite sore and mare does not move around much. What is the trouble and what is the remedy?

Udder has become invaded by a fungous growth (botryomycosis) and will never resume natural function. Amputation of the udder might be performed by an expert. At least stop use of arsenic and inject tincture of iodine once daily and use it freely to paint exterior of udder at same time. Give her two drams of calcium sulphide once daily and increase to two doses daily if necessary.

COLORADO WEATHER REPORT FOR MAY.

DENVER, June 1.—Denver had 290 hours of sunshine during May, 65 per cent of the possible, or 5 per cent more than normal—no day without sunshine, seven with 90 per cent or more, and two with 100 per cent.

Go to Colorado this Summer

You may have had a fairly good time somewhere else last Summer, but you'll have the "time of your life" this summer if you go to Colorado.

Let the Rocky Mountain climate—the pure air, sunshine, magnificent scenery and pastimes make you forget all your cares in a vacation of supreme delight.

Go via the Rock Island and enjoy the advantages of new equipment, fast time, direct route to both Denver and Colorado Springs, and very low rates for the round trip. Unusual reduction July 10 to 15, account Elks' excursion.

Fast through trains three times a day from Des Moines—almost "as the crow flies" to Colorado.

Pullman drawing-room and tourist sleeping cars, electric-lighted reclining chair cars and coaches.

Best meals on wheels.

Let me send you our new illustrated booklet, "Under the Turquoise Sky," containing full information about Colorado, with complete list of hotels and boarding houses. Advice as to excursion rates will accompany it.

Government Plants Trout By the Millions.

DENVER, Feb. 15.—A statement just issued shows that over 7,000,000 young trout were planted by the Government in Colorado streams during 1905.

For a number of years fish in the mountain streams have been increasing in great numbers.

The United States Government and the State hatcheries each year plant a hundred times more fish than are taken out by hook and line.

POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

CROSS-BRED HENS.

BY MILLER PURVIS.

I am not a very good friend to the cross-bred hen, notwithstanding the fact that at least 95 per cent of the hens of this country are of mixed blood. Recently in congress a member of the house of representatives from Iowa made an eloquent plea for the hen, pointing out her productive qualities. I don't suppose this congressman knows very much about the breeds of hens in this country, but he has a lively sense of the importance of the poultry industry as a whole and is an ardent admirer of the hen collectively. He probably did not stop to think that the hen of mixed blood, the lowly and much-berated scrub, is responsible for much the largest part of the profits derived from the poultry industry in this country.

A good many years of my life have been devoted to preaching the doctrine of better poultry and more of it and I firmly believe that pure-bred poultry should be kept by everyone, just as I firmly believe in pure-bred hogs and cattle. At the same time I have moments when I think we insist so strongly on pure-bred hens that we discourage those whose flocks are of mixed blood until they do not give their fowls the kind of care that brings the best results.

I place it to my credit that I have always insisted that a well-cared-for flock of scrub hens would be more profitable than a neglected flock of the best breed on earth. If blood counts for fifty points in a flock of hens, care counts for fifty more. I think with a little judicious cross-examining I might be induced to admit that there might be cases where care counts for about 75 points in making for profit. The truth is that the best layers in a flock of the most mixed-up hens in the country will lay better than the poorest layers in the average pure-bred flock. It is also true that the best layers in a pure-bred flock will lay more eggs than the best mongrels or scrubs that could be selected by the most expert poultryman.

I have had a bit of experience this season that has surprised me. I wanted some hens to sit, as I did not care to hatch more than a few chicks and was not in a position to use one of my four incubators. I hunted around and found a man who was anxious to sell his hens because "the blasted things were eating their heads off and not laying." He thought about fifty cents each would be the proper price. I went to see his hens, and they were certainly mongrels if ever there were any. Big, fat and lazy. That much I saw at once. The owner said they would make good sitters. He knew this because they put in last summer sitting. They seemed to be a mixture of Cochin, Barred Plymouth Rock and Leghorn. I guessed at the Leghorn from their white ear lobes. Three of them were barred and the other three were red, with some black in their plumage. Some had scattering feathers on their legs. They looked promising as sitters and I took the six of them home.

The man I bought them of said they had laid a few eggs during the spring, but not many. I put these hens into a house 8x12 feet and began to feed them the feed I had on hand. This was a mixture of wheat, oats, barley, cracked corn, millet, buckwheat, sunflower seeds, and oyster shells, with a little crushed charcoal. There was no meat in the mixture, and as I did not happen to have any on hand I did not give the hens any. I wanted them to sit and not to lay.

I gave them a good feed of mixed grains morning and evening and every day a big feed of dandelion leaves, chopped fine with a sharp hatchet. The dandelions were fed because they were plentiful and a nuisance. Once in a while I gave them green clover, but not often. I wanted to get the dandelions out of the way.

For a week the hens loafed most of the time. They had no yard to run in and were shut in the house all the time. At the end of the week they were laying two and three eggs a day. Then they started in to show me what

they could do. I got three, four and five eggs a day. I never succeeded in getting as many eggs in a day as I had hens, but for several days at a time I have gathered four and five eggs from the six hens.

One of them finally concluded to sit and is now with a brood of chicks about a week old. The others are still laying. Thirty eggs in nine days is their latest achievement. This is equal to two eggs every three days for the whole flock. For more than two months these mongrel hens have been laying at the rate of nearly 225 eggs each a year. I have built a yard and have given up hope of getting them to sit this year. In fact I am not going to let them sit. If one gets broody I shall break her up at once and put her to laying. If the production of eggs begins to fall off I shall begin to feed meat scrap to promote laying again. I am going to keep these hens at work as long as I can. They have paid for themselves since I got them and if they keep on they will prove about the best investment I ever made in poultry. For breeding stock they are not worth more than I paid for them, but for producing eggs for market they are worth three times as much as they cost.

Some of my friends have remarked that I should not tell about what these hens are doing. I don't see why not. I hope the story will encourage someone to take better care of their scrub hens. The average production of eggs in this country is about five dozen for each hen. With good care given to the same hens this could be doubled without a doubt. This would be doubling the income without investing an additional cent in the business, or adding to the labor connected with it. As the hens of the country now produce eggs the national debt could be paid with the egg money in less than two years. If every flock in the country were fed so as to promote egg production to the highest possible limit the debt could be wiped out in one year. The Iowa hen produces more revenue than the hens from any other state in the Union. Give her a chance and she would make the Iowa hog "sit up and take notice," or lose his reputation as a mortgage payer. If the hog is the mortgage payer, the hen buys the groceries and the fixings for mother and the girls, while father is raising the hogs. And it isn't the pure-bred hens that are doing this. The pure-bred hens count for possibly 5 per cent of the work and the mongrel cross-bred hen does the rest.

Corn-belt farms produce everything absolutely necessary to feeding for eggs except charcoal and oyster shell and both of these are cheap. Mix a lot of grain, such as I feed, throw in a little grit, oyster shell and charcoal, say five pounds of each to each 100 pounds of grain, feed green stuff or let the hens run where they can get it, provide plenty of pure water, give them milk, sweet, sour, or buttermilk if you have it, and your scrubby mongrel hens will surprise you. Sell the old hens—those over two years old—this fall, give the pullets a good house and save the increased profits and you will soon have money enough to start out with a flock of pure-breds that will add dollars to the value of the farm and be something to be proud of when your neighbors come around to see how you take care of things.

HOMESEEKERS' EXCURSIONS.**CHICAGO GREAT WESTERN RAILWAY.**

On the first and third Tuesdays of each month until November the Chicago Great Western Railway will sell homeseekers' tickets to points in Arkansas, Indian Territory, western Louisiana, Mexico, New Mexico, Oklahoma Territory and Texas at rate of one fare plus two dollars for the round trip, except that a maximum rate of \$23.00 from Des Moines will be in effect to above territory with the exception of Mexico. Stopovers will be allowed in both directions. Limit thirty days, stopovers both ways.

On the first and third Tuesdays of each month until November the Chicago Great Western Railway will sell homeseekers' tickets to points in Arizona, Kansas, Missouri, Nebraska, Nevada, Utah, Wyoming, Alabama, Florida, Georgia, Kentucky, eastern Louisiana, Mississippi, North Carolina, Tennessee and Virginia at rate of one fare plus two dollars for round trip. These have limit of twenty-one days to return and allow stopovers on going trip.

On the first and third Tuesdays of each month until November, homeseekers' tickets will be on sale to Denver, Colorado Springs, Pueblo, at rate of \$23.00 from Des Moines and to Ogden and Salt Lake City at rate of \$29.50. Other Colorado points in proportion, all having limit of twenty-one days to return and allowing stopovers on going trip.

To points in Idaho, Montana and Washington homeseekers' tickets on sale the first and third Tuesdays of May, June, September,

CONGO NEVER-LEAK ROOFING

The Ready Roofing that looks like Rubber—feels like Rubber—has the elastic qualities of Rubber—but wears like Iron. There's where it beats any other Ready Roofing made.

It is impervious to heat, cold, wind and storm. Follow the very simple directions which come with each roll and you will have dry, warm buildings and a Never-leak Roof.

OUR HOME DEPARTMENT

All communications intended for this depart-
ment should be addressed to Post Office Drawer
117, Kansas City, Missouri.

WITH THE CHILDREN.

Mrs. Walker feels very sure that the
children of the Home Department were
glad to be invited here today. When she
was a little girl there wasn't anything
she loved better than a party. Sometimes
the party dishes were only bits of brok-
en china, and the party supper bread
and butter and sugar with perhaps a
few apples or cookies. Those things did
not matter in the least; the party was
made because we wanted a good time.
We meant to have a good time and so
we had it.

You Home Department boys and girls
have come in that party spirit, haven't
you? I thought so, and now what shall
we do first?

You want me to tell you a story?

Of course you do. Boys and girls al-
ways want a story.

Well, what shall the story be about?

About something I saw in Europe?

Why, yes. Just let me think a mo-
ment. I wonder if you would like to
hear about the dogs' burying ground
at Edinburgh castle and the fountain
erected by the Baroness Burdett Coutts
in memory of faithful Greyfriars Bobby?
I believe you would. And then, if there
should be time, I might tell you some-
thing about the poor unhappy dogs I
saw in Holland.

Very few American boys and girls
have ever seen a castle, so I must tell
you that Edinburgh castle, like many
other old castles in Europe, is not one
big house, but a number of big stone
buildings connected with each other and
surrounded by a high wall with a mas-
sive gate. At Edinburgh castle this out-
er gate does not admit to the castle
courtyard, but only to a passage way
which, in the old days, was guarded by
six additional gates. This was because
if an enemy got through one gate the
garrison could sometimes beat him back
in the narrow passage way. In this
way they often saved the castle to
which the poor people from the sur-
rounding country usually fled for safety
when danger threatened. Long ago peo-
ple spent most of their time fighting,
and castles were constantly being be-
sieged. This one saw many a bloody
scene, though nowadays everything is
very peaceful.

Although soldiers who are in the cas-
tle now may never need to fight, they
drill every day, and crowds of people
go to see them. I went with the oth-
ers. It was after seeing the drill, while
I was strolling about, that I came upon
the dogs' burying ground. It is a small
place, but so trim with its gravel walks
and well-cared-for little graves that it
was easy to believe the soldiers had
dearly loved the pets they laid away
there. The little mounds were like so
much green velvet and each one had
its marble headstone. On one was
written:

In memory
of
Jess the Band Pet.
42d Royal Highlanders.
15-6-81.

On another was inscribed:

PET

Who followed the 72d Highlanders in
peace and war for ten years.

You notice that these dogs had be-
longed not to one soldier, but to a reg-
iment. Instead of one master they had
had many, who seem to have been their
friends. When Flora, the "Canteen Pet,"
died, the Royal Scots showed their grief
and appreciation by erecting quite a
pretty monument. Another regiment did
the same by "Little Tim" and "Yum
Yum," and so on, with perhaps two
score others.

Long before visiting Edinburgh I knew
of its monuments to Grayfriars Bobby.
It was one of the things I had planned
to see, so one day I hunted it up.

When I reached the neighborhood of
the Greyfriars church all at once I came
upon a fountain where a big dog was
taking a drink. In a minute I knew
it was the fountain I was seeking, for
on top of it, just as if he had jumped up
there to take a look around, stood
Greyfriars Bobby. I don't mean the
real Greyfriars Bobby, you know, but
a bronze image of him; one made a
few weeks before he died. Such a home-
ly, kind, cute little fellow the bronze
Bobby looks! I quite understood how
the real Bobby had so many friends.

**KEEN
KUTTER****Tools for Hard Work**

Hold a Keen Kutter Saw in working position, and see how it fits the hand.
Look along the blade—see how thin—how perfectly it is ground and ham-
mered. Bend it so point touches handle, and it will spring back straight and
true. Strike it and hear it ring. Try it on a difficult cut—it will work fast
and clean. This is but one of the famous

KEEN KUTTER**Quality Tools**

Try every known test on any Keen Kutter Tool—Saw, Chisel, Bit, Axe, Ham-
mer, Plane, and they will prove themselves true. Try the
temper, quality, and hang of the Keen Kutter Forks, Hoes,
Shovels, Trowels, Rakes, Manure-hooks, or other Farm and
Garden Tools, and they show themselves to be the best.
If not at your dealer's write us.

Tool Book Free.

St. Louis and New York, U. S. A.**

SAVE YOUR HAY AND GRAIN!

Stack Covers, made of best quality of canvas, full measure-
ment guaranteed, at bargain prices for the next thirty days.

YOU cannot afford to be without protection at this time. We manufacture
horse and wagon covers and all kinds of canvas goods.

STOCKMEN, ATTENTION!

We carry a full line of rain proof tents of different sizes, together with substantial seats, which we will
rent at very reasonable prices. Write us, before securing sale tent, for prices and illustrated catalog.

Peoria Tent and Awning Co., 117 Main Street, Peoria, Illinois.

When I went up close to the fountain
this is what I read on it:

A tribute to the affectionate fidelity of
GREYFRIARS BOBBY.
In 1858 this faithful dog followed the remains
of his master to the churchyard and
lingered near the spot until
his death in 1872.

You know the story of Greyfriars
Bobby, don't you? No? Why, I thought
all children knew how a poor old tramp
was found dead in a doorway in Edin-
burgh one morning; a little dog beside
him. How, when they buried him, the
dog went to the grave yard and staid
by the grave when the others went
away; how, when the sexton was mak-
ing his rounds before locking the cem-
etery gates in the evening, he found
the dog lying upon the grave and drove
him out; how the same thing happened
again and again for so many days that
at last the sexton gave up driving the
faithful dog away and brought him some
food; how gradually people got to know
about this tramp dog who was so loyal
to his master, and wanting him for
their own, tried to coax him to go home
with them; how the dog never could
be induced to forsake the grave, which
he never left except to go in search
of food; how by and by the city of Ed-
inburgh adopted him, giving him a sil-
ver collar and the name of Greyfriars
Bobby; how after fourteen years the
dog died, mourned by the whole city,
which gave him a public funeral and
laid his body beside the master he loved
so devotedly, and how the rich and be-
nevolent Baroness Burdett Coutts offered
to put up a monument to his memory,
and, her offer being accepted by the
city, this beautiful fountain was erected
to be a blessing to all the dogs and
horses as well as people in that part
of the city.

It is quite a pretty story, is it not?
But telling it has taken so long we
shall not be able to talk about the dogs
of Holland today. How would it be
if we were to have a Children's Day
again, some time before school re-opens?
You would like it very much? Well, I
think it can be managed. I shall see
about it, and mother will tell you when

An All-the-Year-Round Country.

If you wish a profitable location in a cli-
mate pleasant the year through, where
you can make every day count on the farm,
where you can find the best farm bargains,
where crops yield abundantly, markets are
good and all conditions combine to give
greater profits per acre than in any other
section of country and absolutely the best re-
turns for money and labor, select a new
home district in the South, in the territory
of the Southern Railway and Mobile & Ohio
Railroad. For general and special informa-
tion address nearest office.

Chas. S. Chase, Agent,
622 Chemical Building, St. Louis, Missouri.
M. A. Hays, Agent,
225 Dearborn Street, Chicago, Illinois.

the date of the next party is settled.
And now you better play about a while,
trying some of our "Good Games for the
Boys and Girls." Then when you are
ready to be quiet again you may sit
down and hear the story of the Tum-
ble-bug.

Good Games for the Boys and Girls.

The game of shul-a-rul is great fun.
You must have the boys and girls stand
in a circle and each hold in his hand a
sackful of beans or hazelnuts.

Each in turn must take some of the
beans or nuts in his hands, turn to his
left-hand neighbor and repeat the follow-
ing rhyme:

Shul-a-rul,
Two hands full;
Pick-a-penny,
Guess how many?

The neighbor makes a guess. If he
guesses too little, the other one must
supply enough beans or nuts to make
the correct number. Suppose the num-
ber is ten and he only guesses eight. He
must be given two to make it ten.

But if he guesses too many, he must
supply enough to make the number
come up to his guess. Suppose the num-
ber is ten, but he guesses thirteen. He
must give three to make it thirteen.

Another good game is called Copen-
hagen. All the boys and girls take
hold of a rope and stand in a circle.

Inside the circle stands one player who is called the "Dangerous Dane." It is the object of the Dane to dart toward somebody and slap his hands before they can be drawn away from the rope. Whoever gets caught must take the place of the Dane.

The game of Grammar is very enjoyable. One plays teacher and the others pupils. The teacher says, "Write a list of nouns." The pupils get to work and the teacher watches their lists. The one who first makes the mistake of writing down something which is not the "name of anything" (i. e., a noun) has a big mark set down against him.

Then "verbs" are required, and the same procedure follows.

Next, "adjectives;" next, "adverbs," etc., until all are ready to quit.

The "blackmark" pupils should then be made to pay forfeits in order to wipe out their black marks.

Story of the Tumble-bug.

One fine June morning Aunt Betsy and the children started for a walk in the country, and as they sauntered along the road leading from their home to the village, gathering here and there the wild roses and daisies, the children were much amused at the tumble-bugs rolling their balls along the dusty highway.

"Children," said Aunt Betsy, "you little know that in ancient Egypt thousands of years ago this same funny tumble-bug that you find so amusing today was revered as the emblem of immortality and worshiped as a god.

"The history of Egypt is full of reminders of his greatness, for his familiar shape is everywhere among ancient hieroglyphics engraved in the rock or seen on crumbling papyrus. But it is especially in connection with death and the tomb that he is most in evidence.

"The light of the explorer in the dark mortuary passages hewn out of solid rock hundreds of feet under the earth, where lie the mummied remains of an ancient people, discloses the suggestive figure of this beetle engraved upon the walls and

painted in brilliant colors upon the sarcophagus, the mummy case within and finally upon the wrappings of the mummy. What other insect can lay claim to such distinction or has been so immortalized?"

"Oh, how interesting!" exclaimed Marie. "And to think we have seen these funny black beetles year after year, and never knew all this before?"

"But tell us, Aunt Betsy," said Davie, "what are they going to do with this ball which they are busily rolling?"

"Well, they have a purpose and method in their work, as all insects have. This small mass of manure, which by rolling in the dust they have made round and firm, contains an egg, and now Monsieur and Madame Tumble-bug are trying to find a suitable place to bury it. They are very hard to suit in this matter, as you will see, if you watch them any length of time."

"It is certainly comical to see them in their desperate efforts at rolling their precious ball, and they seem so perfectly aimless," said Marie.

"Yes, now just watch the foolish bugs," said Davie; "instead of rolling it down the hill, which would be so much easier, they are trying to push and pull it up the hill."

"How they seem to stand on their heads in their frantic efforts to get it over rough places!" exclaimed Davie.

"Yes, they apparently prefer to bump it along over the clods instead of selecting the smooth path to the right or left," said Aunt Betsy. "They will perhaps play—as it seems to us—with this precious ball for an hour or more before they find a spot that just exactly suits them. If we could understand bug talk, we might know why they are so hard to please in selecting a place to bury their treasure."

"I wish we could see them bury it," said Davie.

"Yes; if we had time we might watch them. But as I have seen them do it, I can tell you all about it," said Aunt Betsy. "Having selected the spot, the beetles first rummage around the ball, as though trying the ground, with the sharp edge of their black, oval-shaped faces. And now Madame Tumble-bug herself does the work of excavating and burying the ball, while Monsieur looks on and approves. This she does by scooping out a circular well with her mole-like digging feet; and the ball gradually sinks with its own weight and an occasional pull, to the depth of several inches. When satisfied with her work, the beetle plows her way to the surface."

"And what of the ball?" asked Marie.

"Oh!" said Aunt Betsy, "the egg within it soon hatches, the larva finding just enough nourishment to carry it to full growth, when it is transformed to a chrysalis, and later to a beetle like its parents. Then, with his powerful front feet, instinct tells him to work his way to the surface, where soon he, with his mate, is keeping the ball rolling just as his parents did before him. And now, here we are at home just in time for luncheon."

"Oh! Aunt Betsy," said Marie, "what a lovely walk we have had; and I know we shall all have more respect for the tumble-bugs since you have told us such interesting things about them."

Jessie Bowles Fisher.

HOME AND HOME MAKING.

LITTLE HELPS BY THE WAY.

The life that on His hand depends,
With love its little treasure spends;
It loves, and love's return is given;
Seeking, it leads the way to heaven;
By loss, it gains a strange increase,
And wins, through struggle, deepest peace.

I believe in God, I believe in man, I believe in the power of the spirit, I believe it is a sacred duty to encourage ourselves and others; to hold the tongue from any unhappy word against God's world, because no man has any right to complain of a universe which God made good, and which thousands of men have striven to keep good. I believe we should so act that we may draw nearer the age when no man shall live at his ease while another suffers. These are the articles of my faith, and there is yet another on which all depends—to bear this faith above every tempest which overflows it, and to make it a principle in disaster and through affliction.—Helen Keller.

JUNE.

June falls asleep upon her bier of flowers; In vain are dewdrops sprinkled o'er her, In vain would fond winds fan her back to life, Her hours are numbered on the floral dial.

—Lucy Larcom.

HINTS FOR HOUSEKEEPERS.

A little sugar added to the water used in basting a roast improves its flavor. To keep sandwiches fresh wrap them in a cloth wrung from hot water and keep in a cool place.

A bad egg will stand on the small end when put in a pan of water. A good one will lie flat.

If you would have rice light and each grain

Let Me Prove to You, at My Expense That a CHATHAM Fanning Mill Makes Your Grain Crop Worth More Money

To prove that the Chatham Fanning Mill will get you full value for every sound kernel of grain you raise, we will allow you to use one a month FREE.

Send at once for our little book "How to Make Dollars Out of Wind." We will forward it by return mail, postpaid, and quote you a special price on a Chatham Fanning Mill.

Then—when you are through wondering how we can sell so good a machine for so little money—send us an order for a FREE test.

We will ship you a Mill, all charges prepaid, and you can use it a month on your own farm to see what it will do.

And, if you are not thoroughly convinced that it is exactly as represented, you can send it back at our expense, and the test won't cost you anything.

We have had 25 years experience making Fanning Mills and own two of the largest factories in America.

Our offer is made in good faith and any Commercial Agency or any Bank in Detroit will tell you of our responsibility.

Send at once for our liberal proposition and get a Chatham Fanning Mill to saving for you as quickly as possible.

It will grade all your grain so you can get "first price" for it.

It will take all the chaff, weed-seed and

withered kernels out of your grain. It will take cockle out of wheat, separate oats from wheat or any one kind of grain from all others.

If you own a Chatham Fanning Mill, you can sell seed-grain to other people instead of buying it yourself.

With "A Chatham" you can clean Corn, Rye, Barley, Wheat, Oats, Timothy, Clover, Millet, Flax, Rice, Peas, Beans, Kaffir Corn, Potatoes, Broom Corn, Alfalfa, Grass

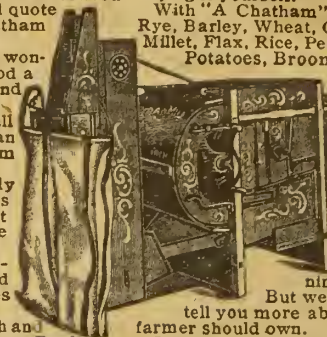

Seed, Cotton Seed, Alsike, Blue Grass, Red Top, Buckwheat, Hungarian, Orchard Grass, Rape, Rye Grass and everything of this kind.

You do not get "mixed crops" nor "sow weeds" if your seed-grain is cleaned with a Chatham Fanning Mill.

But we haven't room here to tell you more about this mill that every farmer should own.

Send for our book at once and get the whole story with our FREE trial offer.

Let us tell you the many different ways a Chatham Fanning Mill puts dollars into your pocket. We ship from one of our nearest branch warehouses. We have one in all leading trade centers in the different states. This gives prompt delivery. Write us today.

Detroit, Mich

A DURABLE ROOFING

One which perfectly excludes water and wind, which is easy to lay, and lasts longer than others is the kind of roofing you want. Shingles are high priced and getting higher every year. Tin roofs. The best roofing is that made of felt and asphalt—but there is a great difference in how this felt and asphalt is combined. In

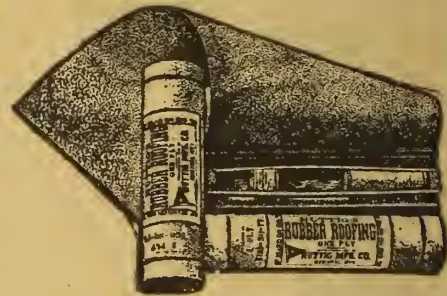

Huttig's Rubber Roofing

The felt is thoroughly saturated with Trinidad asphalt—more thoroughly in fact than any other having 150 per cent saturation as compared to 104 per cent in the best brands of other roofing. This thorough saturation makes Huttig's Rubber Roofing non-absorbing, impervious to frost, and a non-conductor of heat and cold. Keeps buildings warm in winter—cool in summer. Once laid, there is no deterioration or necessity for repairs for years. Anyone can lay it, as nails, caps and cement are packed in each roll. We make this roofing in four grades as to weight, but all of one highest quality.

WE WANT YOU TO KNOW ABOUT OUR ROOFING

You can use it not only for roofing, but also for the sides as well. Don't do any building this year until you investigate this roofing. It's sold by the best lumber dealers everywhere. Don't let your dealer give you something else "just as good." Insist on seeing Huttig's Roofing before you buy. If it isn't sold in your town write us for sample, and we'll see that you get our goods. We'll be glad to tell you about it and its uses. Address,

HUTTIG MFG. COMPANY,
MUSCATINE, IOWA

It comes in rolls with caps, nails and cement inside. This is it.

perfect, it should be washed in several waters, then dropped by handfuls in a "lot" of boiling water, as in cooking vegetables. Let it boil hard for half an hour; drain in colander; sprinkle with salt, and it will be light and fluffy.

Suet may be kept entirely fresh for several days by surrounding it with flour.

Milk can be sterilized at home. Absolutely clean bottles are necessary. Soak them in soda and hot water before using, and scald just before the milk is put into them. The milk should be perfectly fresh. Fill the bottles, cork them tightly with antiseptic cotton, lay them in cold water; heat slowly to the boiling point, boil for an hour and let them cool in the water. Do not uncork until the milk is to be used.

PUREE OF VEGETABLES.

Cut one turnip, a carrot and a potato into thin slices; add to them a few celery tops, a bay leaf, a cupful of chopped tomatoes, if you have it, and two quarts of water in which meat has been boiled. Simmer gently for one hour; press through a very fine sieve; return the mixture to the fire and add one tablespoonful of suet rubbed with two tablespoonfuls of flour; stir until it reaches the boiling point; add a grated onion, a teaspoonful of pepper. Serve with croutons of toasted bread. This will be sufficient for a family of six.

SUMMER FRUITS AND SOME WAYS TO USE THEM.

Strawberry Jam—Pour half a cup of red currant juice over one pound of granulated sugar and allow it to stand for twenty minutes, while you boil over a slow fire one pound of ripe, mashed strawberries, stirring constantly with a slitted wooden spoon. Add the sugar and currant juice, then simmer for half an hour, removing every particle of scum that rises. When cold, seal in tumblers with paraffine.

Cherry Pudding—One-half cupful of butter, a cupful of sugar, two cupfuls of flour, half a cupful of milk, four eggs, one-fourth cupful of milk, scant teaspoonful of baking powder, one cupful of cherries, which have been stoned and sweetened after part of the juice has been drained off. Bake like cake. Serve with any sweet sauce, preferably hard sauce.

Dumplings—Stone some cherries, cover liberally with sugar, and place over them a crust made from a pint of flour, one and

one-half teaspoonfuls of yeast powder, a bit of salt, a small cupful of milk. Steam (tightly covered) about half an hour, and serve with any good sauce.

Pie—Stone the cherries, and bake the same way as an apple pie, with two crusts and plenty of sugar. Canned cherries make nearly as good a pie as the fresh fruit.

Currant Jelly.—Gather the fruit on a dry sunny day, remove the leaves and bits of bark, beat in a granite kettle, and crush to extract the juice. Strain through double cheesecloth, pressing gently. Weigh, and allow granulated sugar pint for pint of juice. Put the sugar in a shallow pan in the oven, and stir occasionally. Cook the juice twenty minutes after it begins to boil, and skim thoroughly. Add the sugar (it should be sizzling hot as it touches the juice), stir until dissolved; when it boils up once test it; if a little dropped from a spoon into a saucer does not separate as it cools, it is done.—Set jelly glasses on a wet folded towel and fill to the brim. The next day set in the sunshine covered with glass, or mosquito netting. When cold protect the top from the air with melted paraffine.

Vinegar from Rhubarb—Crush the stalks, cover well with lukewarm water and leave twenty-four hours. Strain, add a pound and a quarter of brown sugar to each gallon of juice, and half a teaspoonful of lively yeast. Cover and set in a warm place four weeks. Strain again and let ripen.

Dressmaking and Millinery—No. 523.

Sylvia Silverthorne, Muscatine, Iowa.

[All inquiries and remittances for patterns described in these articles should be addressed to Sylvia Silverthorne, Muscatine, Iowa, and not to the office of this paper nor the editor of the Home Department.]

When the noise and the smoke of the Fourth of July fireworks have cleared away, and become a thing of the past, the home mother is again ready to take up her routine of duties, and while she may not be ready to consult the latest fashion plates, she is no doubt on the lookout for such patterns as will help her provide for the needs of the children just out of school, for now their garments must be adapted to both work and play. Surely then she will be ready to greet the Rompers pictured in 4318 as a boon, for whether to be worn as a garment alone or to

Buggy Bargain

How You Can Buy a Fine \$75
Top Buggy Direct from
the Maker for \$45

TWO YEAR GUARANTEE

Why should you pay an extra profit on buggies to the dealer or mail order house, when you can save one third to one half by buying direct from the maker?

I make many styles of good vehicles. My line of buggies is complete. Every one that leaves my factory is as good as it can be made by human skill from perfect materials.

I save you 30 to 50% because I sell direct—no Jobbers, Agents, Salesmen, Dealers or middlemen of any kind stand between you and my goods. You get better buggies, a greater variety to select from and the makers' guarantee of complete satisfaction, or your money back.

And you run no risk in dealing with me, either, because my word is good, and the Company, of which I am President, is responsible for all promises I make you. Just look this up in Dun or Bradstreet, or ask any bank or express company here in our home town, where we are best known.

Now, about my special offer of a handsome \$75 Knox Top Buggy for \$45—the cut

gives you a general idea of it. It's a beauty, stylish

in appearance, well made and the biggest buggy bargain you ever saw. Body is 24 x 54 inches, with wide, roomy seat, handsomely painted and tastily upholstered.

The gear is oil tempered. Equipped with long distance, clipped axles. Full plated reaches. Split hickory shaft and wheels. Oval edge tires.

I sell on 30 days free trial, so you can test this buggy in your own way and time. If you don't find it exactly as represented just ship it back and get your money. I take all the chances—you risk nothing.

So, if you want this big buggy value, please order promptly, as I may not be able to advertise it again as low as \$45. Just send me the money and the buggy will go to you at once with the distinct agreement that I will refund the price and pay charges both ways if you are not perfectly satisfied.

My big free Buggy Book is full of money saving offers. Send for it and compare our prices, styles and qualities with what your dealer offers. Write me today.

R. M. Knox, President.
WESTERN HARNESS & SUPPLY COMPANY,
613 Commercial St., Waterloo, Ia.

be worn as protection to a dainty costume they appeal to mothers of children of the ages for which they are prepared. For the small girl they take the place filled by the Brownie overalls for boys, while at the same time they are just as much of a boy-garment, and are worn by them, with or without the trouser suits beneath. This all-over or one-piece garment may be made of any of the materials of which children's every day

[Child's Rompers, 4318.]

dresses or overalls are made, the choice depending on the use to which the garment is to be put. For girls it is safe to select such fabrics as would be chosen for every day dresses or aprons, for they are to serve a similar purpose. The front of the Rompers is cut in two pieces, the yoke and lower portion being joined, but the back has the waist and the lower portion made separate, a band adjusting them at the waist line. The lower part is divided after the manner of the divided skirt with which we are all familiar, each part being adjusted by means of a little band that confines the fulness below the

knee. Elastic may be used in hems to adjust them instead, and by removing this they are more easily laundered. Put these on the children whether boys or girls, then let them play freely, and don't require them to do that impossible thing—"keep clean." The pattern of the Rompers is 4318, and is cut in sizes for children of 2, 4 and 6 years. One may easily alter the pattern for sizes smaller or larger than those noted. For the tiniest of the wee girls there is a scarcity of new designs, as these are usually considered best dressed in some one of the Hubbard or yoke shapes, but the Empire frock is quite the rage just now and no design is cuter for the small girl than is this. One is pictured in 5392 that is simple and attractive, and although shown made

[5392—Child's Empire Frock. 2 to 6 years.]

very simply one may make it much more elaborately if she wishes. The short waist and the full straight skirt are gathered and joined by means of a narrow band. In this instance the band as well as those of the short sleeves and that about the square yoke are of narrow embroidery insertion. The skirt is simply stitched in several rows, but may have insertion, and if liked an edging of embroidery. Or lace may be used. The pattern is cut in sizes for girls of 2, 4 and 6 years of age. It is easily adapted to the one-year size, and one would not care to make it smaller than this, for even the baby who is being put into first short dresses will very soon be one year old, and would outgrow those cut to her exact age.

Send eleven cents in money (not stamps) for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

Pleasant Fields of Holy Writ

SAVE for my daily range
Among the pleasant fields of Holy Writ
I might despair.
—Tennyson.

THE INTERNATIONAL SUNDAY-SCHOOL LESSON

Third Quarter. Lesson II. Matt. XVIII, 21-35. July 8, 1906.

The Duty of Forgiveness.

It is right for him who asks forgiveness for his offenses to grant it to others.—Horace.

Though with their high wrongs I am struck to the quick,
Yet with my nobler Reason, against my Fury
Do I take part: the rarer action is
In Virtue than in Vengeance.—Shakespeare.

The parable of the king taking account of his servants was a transcript from current history. All the rulers of Palestine were the servants of the emperor. They were likely to be summoned any instant and made to give account of their gubernatorial deeds and revenues. From such a plane Jesus lifts the thought of His disciples to the plane where God is King. It pleases Him to bring His creatures into an accounting with Himself. It is evidently not a last judgment that is pictured, for the unmerciful servant is set loose and given another test. In this parable Jesus portrays a species of preliminary trial which reveals the soul to itself. The effect of this ante-judgment is to reveal to the sinner his insolvency. He is ten thousand talents in debt. These figures simply illustrate the immensity of our liability to God's account. We can not pay a mite out of a talent. In view of his invincible bankruptcy, there is nothing for the sinner to do but to sue for mercy. One of the most consolatory strokes in the parable is this: "The Lord was moved with compassion, and forgave him the debt."

This parable is an expansion, in a popular and attractive form, of the truth stated concretely in answer to Peter's question: "Lord, how oft shall my brother sin against me and I forgive him; till seven times?" The remainder

of the parable shows the incongruousness of the forgiven sinner showing an unforgiving spirit toward his fellow. By the very incredibility of the supposed case Jesus shows that the unfortunate spirit is incompatible with discipleship. The servant who was forgiven a debt of \$15,000,000 finds a fellow-servant who owes him \$15. He does not follow the example of his king. On the contrary he seizes his debtor and demands the last farthing. On hearing of this deed the king is wroth, and cancels his own forgiveness.

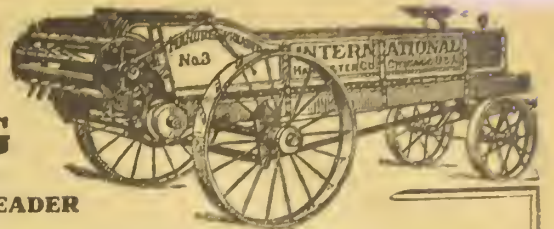

This is Jesus' answer to Peter's question, "How oft shall I forgive?" Peter had made an advance upon the Talmud and rabbis. They taught the duty of forgiveness to the third offense, but after that, allowed anger, resentment, and revenge. Peter more than doubled the rabbinic allowance. He proposes to forgive seven times. Will not the sacred number suffice? But Jesus' laconic and decisive answer is, "Seventy times seven;" that is practically without ceasing. A definite number is put for an indefinite one. In this multiplication of the perfect number by its multiple, Jesus practically says, "Throw away the multiplication-table when you come to the matter of forgiveness."

Analysis and Key.

1. Jesus' use of current events.
For illustration.
Rulers of Palestine summoned to Rome for accounting.
2. Accounting to God.
In this instance not a last judgment.
Preliminary accounting reveals insolvency.

THINGS WORTH KNOWING

If you are going to buy
A MANURE SPREADER

NO machine within his reach is capable of doing so much for the farmer as the modern manure spreader.

But then it must be a machine with features—features of economy and efficiency.

The I. H. C. Manure Spreader has such features.

Any man of experience knows that a spreader only works perfectly when the load is level.

The I. H. C. Spreader is the only spreader with a vibrating rake in front of the beater or cylinder which levels every load and any load of manure.

Any man knows that the apron operates better when power is applied at both sides.

The I. H. C. spreader apron is driven at both sides from both hind wheels.

This saves all torsion, binding, friction and undue strain, and consequently saves breakages and results in lighter draft.

One lever is better than many levers in operating any machine.

The I. H. C. spreader is the only spreader which is controlled and operated entirely with one lever.

It has ten different feeds—can be adjusted

instantly while in motion to spread three to thirty loads per acre.

Large, solid, steel axles front and rear—front wheels cut under—turns very short.

Steel wheels—no rotting or drying out. Broad faced tires with turned in flange to keep out dirt, mud, etc. Lightest and strongest.

Provided with traction lugs on rear wheels—will work perfectly on hard, frozen or wet ground.

Made in various sizes to suit all requirements.

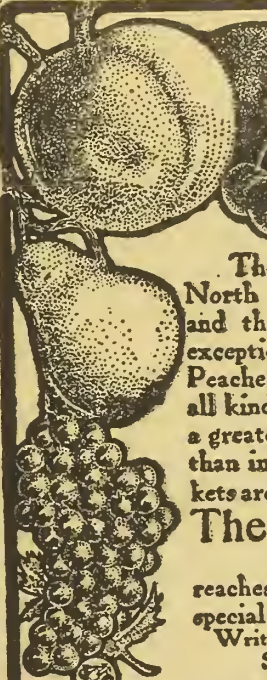

The I. H. C. spreader will distribute perfectly manure of all kinds—wet, dry, mixed, straw, full of stalks, frozen, caked, etc.

It may be equipped with special features known as lime and drill attachments for distributing broadcast, or in drills, fine manure, commercial fertilizers, lime, ashes, salt, cotton seed hulls, land plasters, etc.

Remember what we have told you—it is the manure spreader with special features which all make for success.

Go to the International Local Agent and look it over, get and read the catalogues or write for further information. It will pay.

International Harvester Company of America,
(Incorporated)
Chicago, Illinois, U. S. A.

FRUIT GROWING

The rich irrigated lands of the Arkansas, Grand, North Fork and Uncompahgre Valleys of Colorado, and the Farmington District of New Mexico, offer exceptional opportunities for the fruit grower. Pears, Peaches, Apples, Grapes, Apricots, Plums, Melons of all kinds and small fruit of every variety are raised with a greater average yield per acre—and a finer quality—than in any other section of the United States. Markets are close at hand and the demand exceeds the supply.

The Denver & Rio Grande R. R.

"Scenic Line of the World"

reaches all the above districts and offers special inducements to those seeking locations. Write to-day for free descriptive booklet.

S. K. HOOPER, GENERAL PASSENGER AND TICKET AGENT, Denver, Colo.

3. Divine forgiveness.
- Application to man's forgiveness of fellow.
- Paradox: Forgiven sinner showing unforgiving spirit.
4. No degrees in forgiveness.
- Question "How oft?" not to be raised.
- Peter's advance on rabbis not sufficient.
- 70 times 7. Practically without ceasing.
- Throw away the multiplication table when it comes to forgiveness.

The Teacher's Lantern.

A commercial crisis, personal bereavement, or revival of religion may be God's means of bringing us to account in advance of a last judgment. It may be His way of breaking up the careless security in which we rest.

The great uncertainty of Bible weights and measures is illustrated. On the basis of the Hebrew talent Clarke estimates the amount as £70,000,000 sterling, more than the revenue of the British empire in his day. On the basis of the Attic talent others figure it as low as \$10,000,000. The matter is curious rather than important, however. A vast sum is all that is intended to be indicated.

In view of his debt, its incredible magnitude, and the sinner's invincible bankruptcy, there is nothing left for him but to sue for mercy. The preciousness of the parable is that it teaches one can not appeal in vain.

We are inclined to deprecate this muleting of the once forgiven servant with his whole original debt. Trench asks, "Do sins once forgiven return on the sinner through his after offenses?" He answers his own question well when he says, "The difficulty arises from our

viewing the forgiving of sins in too formal a way."

Olshausen says finally: "This parable explains the ground on which a member of God's kingdom must ever stand ready to grant forgiveness, as only through forgiveness extended toward himself could he have obtained entrance to that kingdom."

SUMMER VACATION IN COLORADO. LOW RATES VIA ROCK ISLAND LINES.

Colorado, as a place for recreation, is the choice of many thousands of summer tourists.

Colorado is a land of clear, pure air and golden sunshine. It is a land of sparkling mountain streams and glassy-surfaced lakes. There are more enjoyable things to do, more grand sights to see in Colorado than any other place under the sun.

From June 1 to September 30 Rock Island Lines will sell summer tourist tickets at rate of \$21.75 from Des Moines, Iowa, to Denver, Colorado Springs or Pueblo and return. Return limit October 31. July 10 to 15, inclusive, the special round-trip rate of \$19.25 from Des Moines, Iowa, is effective.

This latter rate is authorized on account of the Elks' Annual Meeting at Denver July 16 to 21. Tickets limited to return to August 20.

Very low rates will also be in effect to Glenwood Springs, Colo., Salt Lake City and Ogden, Utah, Yellowstone National Park and to the Pacific Coast, with cheap rates for side trips to nearby points of interest en route.

New and improved train service via the Rock Island is an important feature for the Colorado traveler to consider.

Full details of rates, routes, service and any information desired will be gladly furnished by the Rock Island Ticket Agent at 423 Walnut St., Des Moines, Iowa. Geo. R. Kline, C. P. A.

VERY LOW EXCURSION RATES TO DENVER, COLORADO SPRINGS AND PUEBLO

Via the North-Western Line will be in effect from all stations July 10th to 15th, inclusive, with favorable return limits on account of Grand Lodge B. P. O. E. Two fast trains through to Colorado daily, only one night. For full information apply to agents Chicago & North-Western Ry.

OUR SHEEP DEPARTMENT

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep to this office.

DANGERS OF JULY.

The month of July is not without its dangers to the flock. It is the time when all parasitic life is most active and sheep are not without a number of species to give them trouble. It is during this month that the work of the twisted stomach worm becomes apparent. It is not at this time that the worms take up their hostage in the stomachs of lambs, but it is at this time the symptoms become apparent, and we are sorry to note that when the symptoms become pronounced it is quite often too late to furnish a remedy. Some lambs are strong enough to overcome the effects of these worms and they go through in apparent safety, and when they arrive at sheephood they are comparatively free from this parasite. Usually it is the early lamb that is equipped with the means of passing through this period in safety.

We have used worm powders as a means of warding off some of the troubles when not too aggravated. These powders contain santolin, a very good worm remedy. Some cases will not yield, however, to its influences, and more vigorous means have to be pursued. Gasoline and benzine have been recommended as a cure, but these are regarded as dangerous, for very often a lamb dies under the effects of these remedies. The latest remedy for stomach worms is creosote, which has given some degree of satisfaction. Other remedies consist of turpentine, and we usually give it in sweet milk. The best way to give any medicine for worms is to let the lamb fast for twelve hours previous to giving the medicine, and in severe cases it is well to follow two more doses in succession one day apart.

Another fly is given credit for caus-

Cures sore shoulders, necks or backs while harnessed or idle. SECURITY REMEDY CO. Minneapolis, Minn.

ing greater loss than almost any other insect enemy known to sheep, and yet we may say that a great deal of blame is attached to it that does not belong there at all. We refer to the oestrus ovis or gad fly, which flies about in the heat of the day and deposits its eggs in the nostrils of sheep. These eggs soon hatch and the larvae crawl up and become imbedded in the upper recesses of the nostrils.

This trouble is known by all sheep men as grub in the head. One reason why so much trouble is traced to this parasite is that when a sheep ails and dies, examination is made and usually the grubs are located and the trouble is laid at their door. They may have had little to do with causing the death of the sheep, but they get the credit. The way to prevent this trouble is to provide a dark place in the sheds or dense groves, where sheep may go in the heat of the day when these flies are most active. This fly dislikes darkness. The most active sheep will prevent the fly laying its eggs in their nostrils, and this accounts for the strongest sheep being free from grubs in the head.

If lambs are weaned in this month it will be well to see that the good milkers do not have a spoiled udder.

MUTTON TRADE NOT HURT.

For weeks daily papers have been giving the people a lot of hashed up "stuff," that is calculated to turn the stomach of a culture, about the "awful" condition of the packing houses in the great meat centers of the world, and particularly in Chicago. Now from the very necessity of the situation a slaughter house cannot be kept as cleanly as a parlor in a Fifth Avenue residence. No one expects that. These "penny a liners" would have the reading public to believe that even the most ordinary measures for cleanliness are neglected.

At the present writing this agitation has not hurt the mutton trade, but should it be kept up there will be a tendency to cut out all packing house products, in which case the mutton market would suffer. Many people will consume things that are a hundred times worse and never make a face. They will continue to eat poultry that has been undrawn and pronounce it delicious. Herring, cod, sardines, shrimps and snails are all pronounced luxuries and are eaten with an apparent relish without ever a thought of what they are or where they come from.

We look for the agitation to die down shortly and people will soon forget it and in the meantime they will get back to a meat diet and no meat will take the place of mutton in summer.

MAGGOTS

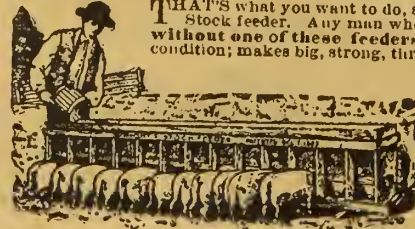

Sheep placed on pasture often become so foul in the vicinity of the tail that flies lay eggs and if not watched closely there will soon be thousands of maggots in that region giving all sorts of trouble. If maggots are present the individual will soon be separated from the rest of the flock with a dejected appearance and will be seen to lie down and immediately get up again and will repeat this many times. The cure consists in washing and making an application of turpentine or kerosene. The wound should be watched closely for two or three days as the maggots are hard to get rid of.

THE WOOL SITUATION.

This is a season of the year when all should be activity in wool circles, but a dullness is apparent that is unexplainable at this time when the stock in manufacturers' hands is known to be low. There is only one reason for this. It is largely due to the fact that buyers do not care to pay the price asked by producers for the clip that is now ready for the market. Woolgrowers of the West realize that the middlemen got about all there was in the business last year and this year they feel that they have a right to ask, and that the traffic will bear better values and they are not backward in making their demands.

The best advice we have say that

Make More Money off Your Hogs

Hog and Sheep Feeder
C. A. WRIGHT,

THAT'S what you want to do, and that's what you can do if you use Wright's Stock feeder. Any man who has a sow and litter of pigs can't afford to be without one of these feeders. It saves feed, and always keeps it in good condition; makes big, strong, thrifty pigs; develops the whole bunch evenly, and will pay for itself in one season. Used for sows, shelled corn, oats, barley, ground feed, etc.

WRIGHT'S STOCK FEEDER is now being ordered by up-to-date hog raisers everywhere. Hundreds using them. They all say they would not think of raising hogs the old way.

Price, \$10—Freight prepaid on all orders for a limited time. A farm right for Hog, Sheep and Chicken Feeder goes with every order for a 10-foot Feeder. My catalog tells all about the hog, sheep and poultry feeder. Send for it, mentioning The Homestead.

Rosendale, Mo.

THE GREATEST OF ALL CEREAL FOODS. No fat or uncertain mixture. A Natural FOOD LAXATIVE. A whole kernel of Rye to each flake. ASK YOUR GROCER FOR IT or write us for our THREE SPECIAL OFFERS. A pound package by mail, post paid, for 25 cents. It will positively cure the most aggravated case of constipation. Write today.

MINNEAPOLIS CEREAL CO., Dept. I-9, MINNEAPOLIS, MINN
CANVASSERS WANTED EVERYWHERE.

SAVE YOUR WHOLE HAY CROP

and put it up in the best possible condition by using our stack covers. A little wet hay spoils the quality of the whole stack. You might just as well have all good hay. Our Stack Covers will do the business. Made of best quality canvases, they afford absolute protection. Quite often they'll save their cost in a single season's use. You can't afford to be without the protection they provide. Write us for sample of goods and prices. Address DES MOINES TENT & AWNING CO., 326 Walnut Street, Des Moines, Iowa

SOUTHWEST

The Land of BIG CROPS and PROSPERITY

Are you making as much off your farm as you ought? No doubt you are making all you can. The trouble is the land costs too much. It takes too much money to buy a big farm, and so you are trying to make a living on a small farm, or perhaps you are renting one and paying a good share of what you raise, in rent. Wouldn't it be better to go where the price of good land is so little that you can own a big farm—where every acre of ground is working for you and all you raise is paying you good profits?

There are thousands of acres of fertile land in the Southwest along the line of the Cotton Belt Route that can be bought for from \$3 to \$10 an acre. This land is increasing in value each year.

See the Southwest at Small Cost

A trip to the Southwest would convince you that your best interests lay in settling there. The trip can be made at very little expense. On the first and third Tuesdays of each month you can purchase a round trip ticket to any point in the Southwest on or via the Cotton Belt Route at very low rates. Stop-overs will be allowed for you to examine any locality you are interested in.

Write at once for free copies of books describing this wonderful country and for full information about cost of tickets, etc.

L. E. SAUPE, T. P. A., Cotton Belt Route, St. Louis, Mo.

stocks are accumulating all over the West simply because buyers and sellers cannot come to terms. Sheep men feel that they can afford to act in an indifferent way, for they know very well that the wool is wanted and most of them are not pinched for cash, and for that reason they are not compelled to sell. In speaking of the wool situation a Boston report says:

"In view of the prices which have been paid for a number of the new clips, either the consumer will be obliged to pay more for wools, if he buys them, or the trade handling them must do business at a loss. The latter, however, are confident of a strong market between now and fall, and realize that the longer the manufacturer keeps out of the market the more wool he will be obliged to buy when he does come in to lay in his raw material, especially in view of the very firm situation maintained abroad, although they do not lose sight of the fact that at the last London auctions the choicest sorts for which the United States paid extreme figures in March (generally 16 to 17d) have lacked full support and that consequently medium grades (46s and 44s) often showed 1/2 to 1d decline. The fine qualities were in good demand, and ruled firm at the March rates. With

this exception, average wools found a strong market and the majority of cross-breeds suitable for spinners and top-makers sold at an advance of 5 to 10 per cent."

NEW HOMES IN THE WEST—SHOSHONE RESERVATION TO BE OPENED TO SETTLEMENT.

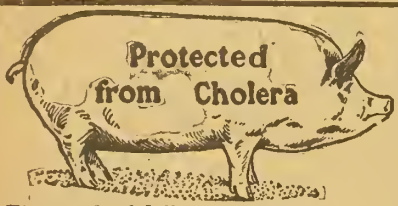

Chicago & Northwestern Railway announces round trip excursion rates from all points July 12th to 29th. Less than one fare for the round trip to Shoshoni, Wyoming, the reservation border.

The only all rail route to the reservation border. Dates of registration July 16th to 31st at Shoshoni and Lander. Reached only by the Chicago & Northwestern Railway.

Write for pamphlets, telling how to take up one of these attractive homesteads. Information, maps and pamphlets free on request to S. F. Miller, Assistant General Freight and Passenger Agent, C. & N. W. Ry., Omaha, Neb.

\$4.50 TO ST. PAUL AND MINNEAPOLIS.

The Chicago Great Western Railway will have a popular excursion from Des Moines to St. Paul and Minneapolis and return, leaving Des Moines at 9:30 p. m., July 25th, by special train at rate of \$4.50 for the round trip. Sleeping car berth rate \$1.00 and seats reserved in Special Coaches for ladies and gentlemen without additional charge. Tickets good to return on all regular trains leaving the Twin Cities Sunday and Monday following. For full information call on E. J. Sawyer, C. T. A., C. G. W. Ry., 514 Walnut St., Des Moines, Iowa.

Thousands of dollars are saved annually to breeders of swine by the timely use of

Chloro-Naphtholeum Dip

The most successful hog men use Chloro-Naphtholeum Dip not only as a cure, but as a means of insuring the health of their animals. Chloro-Naphtholeum Dip prevents and cures hog cholera, kills lice, disinfects the pens and keeps them in a sanitary condition. As an internal remedy it kills worms.

DRAKE UNIVERSITY.

There is no university in the West that has made the rapid advancement that Drake University, at Des Moines, Iowa, has in the last five years. During the year just closed, which was the largest in the history of the school, a number of fine new buildings were added to those already adorning the campus, greatly facilitating the work which the big increase in attendance will necessitate next year. On page 1 of this issue is given a very fine picture of the main administration building which stands in the center of the campus. The different courses of study at Drake are most thorough in every respect and it is the aim of the school to give every young man and woman entering its doors the best education that can be secured anywhere. There could be no better location for such a large school than Des Moines, the largest city in the best state in the Union, where there are many advantages not to be had in other school towns. The cost for an education at Drake is very moderate considering the excellent course of training and the fine accommodations one has. Our readers in looking over the advertisement on page 2 will note the many different colleges and schools connected with the university, so that the student has an exceptionally fine chance to select that which he most desires. The large enrollment of 1,634 students last year attests the great popularity of the school. The one hundred or more instructors are leaders in their different lines of teaching, so that the student gets the best the class room affords. Write today for free catalog giving every particular about the course of study, cost of living and all details connected with college life. Kindly mention this paper when writing.

FIELD NOTES.

Hereford bulls are offered for sale by Mr. B. F. Clark, of Albia, Iowa.

Improved large Yorkshires are offered for sale by Mr. F. Rabeller, Leigh, Neb.

Messrs. Ruebel Bros., of Rockwell City, Iowa, are offering a few good Short-horn bulls for sale.

Mr. Delmar McCann, of Kennard, Neb., offers ten or twelve good Short-horn cows at private sale.

Anyone wanting a good Tamworth boar should write Messrs. Norrish & Bevington, Kingsley, Iowa.

Anyone wanting the services of a good live stock auctioneer should correspond with Mr. James P. Spearman, Papillion, Neb.

Mr. W. B. Seeley, of Mt. Pleasant, Iowa, names October 24th as a date on which to hold a public sale of Aberdeen Angus cattle.

A few choice Duroc Jersey sows bred to the Nebraska State Fair prize-winning boar, Junior Jim, are offered for sale by Mr. Austin Reushaw, Blair, Neb.

Mr. J. E. Corwin, steward of the Van Buren County Farm, Mt. Zion, Iowa, claims the date of November 15th as that on which to hold a public sale of Aberdeen Angus cattle.

Some good young Hereford holls and cows and heifers are offered for sale by Mr. J. G. Von Seggern, Wisner, Neb. Write him at once. You will find he is reasonable in his prices.

Messrs. C. W. Daws & Son, of Harlan, Iowa, have about seventy Poland China spring pigs on hand. They have a couple of good fall boars for sale, and they are pricing them right.

Choice imported Shropshire rams from such noted flocks as Minton, Cooper, Williams and Buttar, can be bought of Messrs. Chandler Bros., Kellerton, Iowa. They also have a grand lot of home-bred rams of the low-down, blocky type. If you would have the best, you will have to order of Messrs.

Chandler, and the sooner you send your order the better chance you will have of getting one of the tops.

Three richly-bred Scotch bulls are offered for sale by Messrs. Claus Johnson & Sons, Rolfe, Iowa. One of these is a richly-bred Missie and another is out of Imp. Marchioness. They are cheap, quality and breeding considered.

The announcement of Mr. Jno. J. Schmal, of Sutton, Neb., breeder of Poland China swine, will be found on page 22 of this issue. Mr. Schmal has a choice lot of spring boars for sale. For the breeding of his stock read the advertisement.

Mr. A. L. Mossman, of Radcliffe, Iowa, proprietor of the Prairie Glenn herd of Durocs, claims January 29th for his brood sow sale. Mr. Mossman is one of the leading Duroc breeders in Iowa, and we know that the stuff he puts up at his sale will not only do credit to him, but do good for their purchasers.

We desire at this time to refer again to the advertisement of Mr. August Post, of Moulton, Iowa. Mr. Post is selling binder twine direct from the factory to the farm at a lower price than most dealers are obliged to pay. He wants farmers as agents. Look up his advertisement on page 5 and write him for full particulars.

Mr. Smith Brown, Waterloo, Neb., one of the old reliable Duroc Jersey breeders in the state, has 125 spring pigs, sired by Echo King, Red Chief I Am, and Crimson Wonder 2d, and he has some good ones. If any of our readers want a hoar they should write to Mr. Brown at once. He always has something good to offer.

With this issue begins the Duroc Jersey advertisement of Messrs. J. W. Reynolds & Son, of Defiance, Iowa, and they will be glad to hear from anyone who wants a good Duroc Jersey boar. They have the leading strains in their herd and they can furnish breeding stock at very reasonable prices. If you want a young boar write them at once. They will treat you right.

Write Mr. J. S. Teal, Lamoni, Iowa, if you want a Duroc Jersey pig sired by such noted boars as Ben Davis, the Iowa State Fair prize winner; Proud Advance, the noted winner and sire of winners; Ohio Chief, the World's Fair boar, and American Royal, the undefeated sweepstakes hoar. Write Mr. Teal at once if you want a boar by any of the above sires.

Mr. A. L. Stutzman, of New Sharon, Iowa, breeder of Short-horn cattle, announces that he now has for sale ten Short-horn bulls ranging in age from eight to fifteen months. They are Scotch and Scotch-topped. He also has twenty females consisting of good, useful cows and heifers. He invites an inspection of his herd, and states that prices will be reasonable on one or in car load lots.

Messrs. Arch Brown & Sons, of Waterloo, Neb., have a most excellent bunch of Duroc Jersey pigs this season sired by old Echo King and Royal Top Notcher. They are going to put up a good offering in their fall sale, among which will be a number of good gilts and brood sows, bred to the well-known Sure Winner. Don't forget Brown & Sons when you want a good Duroc Jersey pig.

Forty cracking good fall Poland China boars are offered for sale by Mr. Chas. M. Hulbert, Oakland, Neb. These are sired by Chief Enterprise and Oakland's Prospect, two of the best-known boars in Nebraska. If you would have a good one you must of necessity buy of Mr. Hulbert because he has the reputation of having as good as there is. Write him today and tell him just what you want and get his prices.

Messrs. Bridgford & Nesbit, of Aledo, Ill., the well-known breeders of Poland China swine, have had very good luck with their spring pigs. They have about twenty-five pigs sired by their well-known herd boar, Faultless Perfection Jr., and seventy-five pigs by the boar which was purchased at the Illinois State Fair last year, Young Delight. They are in a position to furnish new blood to their old customers and good large-boned, smooth pigs to any reader of this paper at reasonable prices. Write them as above, kindly mentioning this paper. The announcement will appear in a short time in these columns.

Mr. Jack Westrope, of Harlan, Iowa, secured at the Teho Lawn dispersion sale Sweet Violet 3d, a daughter of the noted show cow, Sweet Violet 2d, that sold for \$3,705 at his father's dispersion sale several years ago. She was one of the best cows in the offering and shows a marked resemblance to her illustrious mother. She had a Choice Goods heifer calf at foot and she cost Mr. Westrope \$605. Mr. Westrope has a number of good bulls on hand, several of which are straight Scotch, of the Princess Royal and other well-known families. He is pricing these at such figures that any one can afford to buy. Write him if you want a young bull.

Mr. Thomas H. Canfield, of Lake Park, Minn., breeder of large Yorkshire hogs, writes: "We have made the following sales of sixty-nine large Yorkshires since our last report, April 12th, and the demand is better than ever before at this season of the year: In Minnesota: Messrs. E. Ohy, Monticello; M. L. Thompson, Wells; Nick Bertrand, Iona Lake; Gust Peterson, Willmar; Dr. R. T. Gilmore, Bemidji; George Wiertz, Paynesville; Geo. Kirk, Bemidji; L. O. Larson, Minneapolis; W. J. Petrie, Janesville; Frank Gruszka, Ivanhoe, and Carlos Billings, Audubon. In North Dakota: J. Hildremyr, Petersburg; M. H. Gilroy, Kathryu; C. B. Kidder, Wahpeton; A. A. Booth, Rogers, and Henry Simon, Valley City. In South Dakota: M. Lupient, Warner; S. Frankhauser, Gettysburg; Erick Loe, Irene, and Jos. Knadle, Vienna. In Nebraska: Clarence Weaver, Tekamah; H. McClanahan, Clay Center; Rome Miller, Norfolk; W. R. Thomas, Newcastle, and T. L. Trowbridge, Blue Hill. In Iowa: Mr. W. A. Peters, Volga City, and Mrs. Henry Davis, Britt. In Illinois: Messrs. C. H. Carr, Ringwood, Experiment Station, Urbana. In New York: Messrs. Quentin McAdam, Utica, and A. S. Crumh, De Ruyter. In Wisconsin: Mr. George W. Dawson, Beloit. In West Virginia: Mr. Jacob Geiger, Jr., South Parkersburg. In Wyoming: Mr. S. J. Evans, Dietz. In Tennessee: Mr. A. C. Welch, Hartsville. In Washington: S. T.

Horse Owners! Use

GOMBAULT'S

Caustic Balsam

A Safe, Speedy, and Positive Cure

The safest, Best BLISTER ever used. Takes the place of all liniments for mild or severe action. Removes all Bunches or Blemishes from Horses and Cattle. SUPERSEDES ALL CAUTERY OR FIRING. Warren, Farmington. In Missouri: E. C. Dameron, Clarksville. In Maryland: Cedar Farm Co., Rising Sun. In Montana: Mr. George E. Bolster, Plentywood." See advertisement on page 22.

Mr. H. G. Warren, of Inland, Neb., breeds the useful type of Duroc Jersey swine. At the present time he is making a good price on spring boars of the large, roomy kind. His herd represents the blood of Improver 2d, Higgins' Model, Jumbo Perfection, and other sires of note. His advertisement appears on page 23.

The breeder looking for good Poland China swine can find a herd of seventy-five spring pigs to make his selection from at Mr. H. S. Chapman's Walnut Grove herd at Pawnee City, Neb. They are large, growthy pigs, royally bred, with good bone, neat head and ears. For a list of their sires see the advertisement that appears on page 22 of this issue.

In his advertisement found on page 22 of this issue, Mr. J. R. Triggs, of Dawson, Neb., reports that his this season's crop of Poland China pigs are very fine. They are of the large, roomy kind. The boar at the head of the herd is Major M, by Blain's Tecumseh, a 900-pound animal, that breeds his type. Mr. Triggs announces that he will have some extra good boars for sale.

Mr. A. J. Podendorf, of Logan, Iowa, writes: "Just say to Homestead readers that I will make a draft Poland China sale at Council Bluffs, Iowa, on October 12th, at which time I think I will put up the best offering that has ever been sold from my herd. I have about seventy-five spring pigs and twenty head of fall stuff to select from, and I may put in a few matured sows. The pigs are largely the get of my noted hoar, Iowa Sunshine, and for finish, size and quality they cannot be beaten this season. Breeders who are wanting the good stuff should remember my sale at Council Bluffs, Iowa, on October 12th."

Mr. Albert Bell, Lake City, Iowa, has 110 Duroc Jersey spring pigs on hand, and as he is one of the extra good feeders the boys may expect some good things for the fall trade. Mr. Bell owns Leather Stockings II., the boar that got third at Des Moines last fall. He is a son of Allen's old sweepstakes sow, Nellie A., and he is a hog of extra length and good bone, and is siring a lot of good pigs. He has a lot of good brood sows in his herd largely of the Higgins' Model, Orion, Improver II. strains, and he has an extra good Chicago Lad sow. Mr. Bell will be in position to furnish boars to the trade this fall, and he will be pleased to book orders at any time.

Mr. J. M. Morrison, of College View, Neb., is making some very good prices on Duroc Jersey fall boars. Every breeder and reader of The Homestead is, or should be, acquainted with Mr. Morrison's herd. He has pigs sired by the great Ohio Chief, a one-third interest in which was sold by this firm for \$2,000. One of the greatest collections of sows to be found in the world will be found in the Morrison herd. He has prize winners galore. Those in need of good stock should send their orders in early and secure some of the royal blood of the breed. Look up Mr. Morrison's advertisement on page 23 of this issue, and note the breeding of the herd. Please mention this paper when writing, and watch its columns for future announcements.

Beginning with this week's issue will be found the Duroc Jersey advertisement of W. A. Staples & Sons, of Glidden, Iowa. This well-known firm have been forced right up to the front of the Duroc Jersey procession, largely through their purchases last winter of many of the best sows offered at public sale. As a result of this they not only have the best crop of pigs, but also the best bunch of brood sows they have ever had on their farm. They have 125 spring pigs, and these are sired by Orion, Junior Jim, Critic's Echo, Proud Advance Again and O'Pig, the latter being a son of old Orion. Nancy VIII, the sow they paid \$605 for at the Manley sale, is raising three boars and three sows by old Orion, and they are good ones. One boar in this litter is an especially good one and they are going to name him "Clear the Way." The rest of the litter are right up and coming and are going to make something very desirable for the boys to go after. Another grand good sow in this herd is Willmette, a daughter of Indicator, and she has five splendid pigs by O'Pig. Here is a sow that has a right to go anywhere and barring a little heaviness in ear, should be considered one of the best sows in the state. Acme's Nancy, a Russell-bred sow, has a good litter by Critic's Echo, while Queen of Blair, a daughter of Golden Perfection, has a litter by Junior Jim. Beatrice, a daughter of the great Kruger's Maid, and one of the Pete Alsin show litter, has a nice bunch of pigs by Advance Dandelion. They have four of those good "Nancy" sows in the herd, and they prize them very highly, as they are among the very best breeders. The above firm will make a boar sale on November 3th and a sow sale on February 25th. They have 125 pigs and out of this number it will not be a hard proposition to secure a herd header. If any of our readers want anything in the Duroc Jersey line they will find the firm of W. A. Staples & Sons a reliable one to purchase from and they are

PILES

FISTULA--NO MONEY TILL CURED

MR. JOHN A. ELLIS, CLARINDA, IOWA, WRITES: "I suffered for seventeen years with bleeding and protruding Piles, Hemorrhoids and Contracture. I took your treatment a year ago; it was very mild and the charges quite reasonable; you did not accept one cent of money until I was cured, and I was to be the judge."

All diseases of the rectum treated on a positive guarantee and no money accepted until patient is cured. Send for free 352 page book, a treatise on rectal diseases and hundreds of testimonial letters, valuable to anyone afflicted. Also our 132 page book for women. Both sent free. Address either our St. Louis office or

Town..... State.....

going to have the goods to offer the boys this year.

Mr. H. C. Duncan, of Osborn, Mo., names August 15th as a date to hold a public sale of Short-horn cattle at Maple Hill Farm near that city.

Some very promising male and female Duroc Jersey pigs sired by choice boars are offered for sale on page 23 of this issue by Mr. G. Van Patten, of Sutton, Neb.

The Fisher Live Stock Co., of Hastings, Neb., are making living prices on the class of Obester Whites they are raising. This is one of the old established herds of this state. Spring pigs are doing fine and have made a good growth. They also have some good sows and gilts that will be priced worth the money.

Messrs. I. Barr & Son, of Davenport, Iowa, write: "Our herd of Short-horn cattle, which numbers over 300 head, is doing well. We still have on hand a few choice bulls of rare Scotch breeding, sired by our imported Princess Royal bull, Prince Oederic, and Royal Bud. They are of show yard type and select herd headers." See advertisement on page 24.

Messrs. W. J. East & Son, of Clay Center, Neb., make the announcement in their advertisement on page 23 that they purchased the highest priced Duroc Jersey sow ever sold in Kansas, and that they have now a litter of pigs out of her. They also have other litters by Bezdek, the first prize boar at the Nebraska State Fair, also third prize winner at St. Louis.

Three hundred choicely improved farms, located in Lyon and Coffey counties in the heart of the best part of the Neosho river valley, Kansas, are offered for sale by Mr. Ed. F. Milner, of Hartford, Kan., in his advertisement appearing on page 15 of this issue. To any reader of this paper who contemplates buying an eastern Kansas farm, we would make the suggestion that they read the advertisement thoroughly from which valuable information can be obtained, and write Mr. Milner for his new illustrated descriptive circular.

With this issue begins the advertisement of Dr. H. Pritchard, of Wisner, Neb., one of the best Poland China breeders in the West. Just now he is offering some extra good fall boars sired by Perfection Keep On, and they are good ones. The Doctor owns Big Tom 2d, the largest boar in eastern Nebraska, and he will weigh close to 1,000 pounds. Dr. Pritchard has one of the good herds and he can be depended upon to furnish a pig true to description. Write him for prices and descriptions. He has some good boars and now is the time to get the best. See advertisement on page 22.

Readers of this paper who want large Yorkshires should order at once of Mr. F. Rabaler, Leigh, Neb. He has one of the best herds in America and can sell you a foundation for a herd, with a boar not akin. The Rabaler herd is made up of the best imported stock from Canada and England. Buy a foundation for a herd of one of the most prolific hacon breeds known. The Yorkshires are coming right to the front and the packers are offering premiums on car load lots whenever they can get them. If you want to start a herd of Yorkshires write your wants to Mr. F. Rabaler, Leigh, Neb.

Mr. W. J. Carlin, of Bowen, Ill., breeder of Duroc Jerseys, has a nice lot of spring pigs for sale at reasonable prices. A litter of exceptional merit is out of a sow by Tip Top Notcher and are sired by Hanley, the noted boar now heading the herd of Messrs. McNeil Bros. There are nine in this litter and they are fit to go into any company. Another litter is out of a litter sister to sow which topped the record-breaking sale of Messrs. McNeil Bros. These are also sired by Hanley and are worthy of places in good herds. A Hanley litter out of sow by Sec's Kan't Be Beat is coming along nicely and any breeder wanting good Durocs at a reasonable price will do well to write Mr. Carlin at once, kindly mentioning The Homestead.

Mr. Howard A. Chandler, of Chandler Bros., Kellerton, Iowa, writes us from Shrewsbury, England, where he is now buying Shropshire sheep, that he has just bought a number of prize winners on that side and will be ready to furnish his customers sheep of a most excellent quality at reasonable prices. "We know that we have bought some of the best sheep, both in breeding and in individual merit," writes Mr. Chandler, "and we feel sure our customers will be better pleased with the best. We have selected for type, size and character and are as near perfection as can be found in England." Those of our readers who like good Shropshires will make a note of this fact and call on or write Messrs. Chandler when they wish something good.

Mr. A. E. Poush, breeder of Duroc Jersey swine, of Chariton, Iowa, writes: "My pigs are doing fine. They will weigh from seventy to 110 pounds and are sired by five prize-winning boars, namely, Top Notcher Again, Proud Advance, Leather Stockings 2d, Ben Davis, and Improver King. Daisy Orion, the top of the White & Dewey sale, sired by Orion Dandelion, has a fine litter of seven by Proud Advance, five sows and two boars. Madrid Belle, the noted brood sow, has a fine litter by Proud Advance. One of this sow's pigs, a gilt, weighed seventy pounds when only sixty-five days old. Queen's Choice also has a nice litter by Proud Advance, and there are some fine boars in this litter. I have two litters by Ben Davis and out of Improver's sows that are coming along fine; one fine litter by Leather Stockings 2d and out of a Top Notcher Again sow; also one litter by Top Notcher Again out of a Van's Perfection bred sow. My boar, Hardy Red, out of Jumbo

Red, is coming along in fine shape. I have a fine fall male pig sired by him that I will price right. I am booking orders now for future delivery."

Readers of The Homestead will note the change in the date claim of Mr. H. S. Allen, of Russell, Iowa, that has appeared in The Homestead recently. The sale was reported to be held on February 27th. This was an error; it should have been February 7th. Mr. Allen at that time will sell Duroc Jersey hogs.

Poland China bred sows and gilts due to farrow in August or September are offered for sale on page 22 of this issue by Messrs. C. C. Drake & Son, of Terre Haute, Ill. They also have early spring and fall boars of all the leading strains that are good individuals with plenty of bone, for sale. They announce that they will be priced so that any farmer can safely buy them.

An Arkansas colony is being formed by F. H. Petts, of Warsaw, Mo. He has secured a fine tract of land in that state where the climate is fine and prices are very low, and any of our readers who wish to know about it should write Mr. Petts at once. State what amount of cash you can put in, the number of acres you want and any other information you can give and you will receive a reply by return mail that will be beneficial to you.

Mr. John M. Cox, Jr., of Harlan, Iowa, one of the best Poland China breeders in the state and one of the most reliable, has about sixty spring pigs on hand which he is developing, for his fall trade. These are sired by Winsome Dude, Big Moss Chief and Dude's Wonder. Mr. Cox has ten good fall boars on hand, one of which is a son of Nemo L's Dude. These are for sale at any time and he also has a good aged boar that he will price to some good breeder. If you want these write him.

Mr. W. W. Vaughn, breeder of Short-horn cattle, of Marion, Iowa, writes: "I have sold my Scotch Acorn herd bull, Princess' Hero of M. V. 17881 to Mr. D. C. Bartlett, of Panama, Iowa, for \$300. After visiting several of the good herds of the state Mr. Bartlett concluded that Princess' Hero was about what he wanted to head the choice herd he is getting together in Guthrie county, and we believe he has made no mistake, as Princess' Hero is a bull of choicest breeding, extra fine quality, and has proven a valuable sire."

Mr. E. Z. Russell, breeder of Duroc Jersey swine, of Blair, Neb., announces in his advertisement that he has nothing at present for sale, but that he has 200 pigs comprising this year's crop that he will be ready to ship after September 1st. He writes: "My pigs are coming along as well as usual at this season of the year. I do not try to push my spring pigs, preferring to let them grow and mature. I hope to be at the Iowa State Fair with some of my hogs this fall, and hope to see some of my old customers and anyone interested in the Duroc Jersey breed."

Mr. W. W. Vaughn, proprietor of the Wildwood herd of Short-horn cattle, of Marion, Iowa, is making a special offer of eight good, blocky, well-formed red bulls in his advertisement appearing on page 24 of this issue. They range in age from ten to twenty months. Two are Scotch Orange Blossoms, while the others have two to five Scotch tops on good popular families. Some are from very good milking families. Mr. Vaughn will also spare a few good young cows and heifers in calf or with calves at foot by high-class Scotch bulls. Write for prices or go and visit the herd.

The Homestead takes this opportunity to direct the attention of its readers to the new advertisement appearing on page 4 of this issue, of Mr. J. W. Pedigo, of Lucas, Iowa, who is placing on the market a lightning arrester. Mr. Pedigo's device is one by which the same movement opens both the line and ground wire, making an absolute disconnection outside of the house on telephone wires where it is used. It is claimed that it works equally as well on metallic bridging lines. Other important features in regard to it can be learned by reading the advertisement. Write to the inventor, Mr. Pedigo, who desires agents.

With this issue begins the Poland China advertisement of Mr. W. N. Booth, of Danbury, Iowa, proprietor of the "Wild Rose" herd, noted throughout the West as one of the very best of this popular breed. Mr. Booth has a splendid crop of both fall and spring boars for sale. His fall boars are mostly sired by Uneda Thickset, a son of the great boar, Thickset, while his spring pigs are sired by the same hog, also by Keep On Jr., a son of the great Keep On, and one of the litter that won second prize at Des Moines in 1904. Mr. Booth can sell you a boar of any age from a spring pig to a herd boar. Write him for what you want, as he has some good ones. Kindly mention The Homestead when writing.

Mr. Geo. A. Bonewell, breeder of Short-horn cattle, of Grinnell, Iowa, in writing in regard to his herd, says: "I have had very good success selling bulls through my advertisement in The Homestead. I have sold lately bulls to the following: One to Mr. D. J. McMillan, Geneva, Iowa; one to Mr. Ben Gress, Walnut, Iowa, to head his herd of Short-horns; one to Mr. D. A. Baker, Rose Hill, Iowa; one to Mr. Sam Fish, Jacob, Iowa, and one to Messrs. Fluck & Dufus, of Grinnell, Iowa. These were all extra good calves from eleven to fourteen months old. I have yet for sale one good Scotch-topped bull twelve months old, and will price him at \$80 if taken soon. He is sired by Victor Royal. I also have a pure Scotch bull, Scottish Lad, sired by the great breeding bull, Victor Royal 219533, he by Royal Rosewood 173629. His dam is Merriment 2d by Imp. Red Light 149769. He

E. J. SAWYER, City Ticket Agent,
514 Walnut Street, - - Des Moines, Iowa.

is an extra good calf and weighs about 1,000 pounds." See Mr. Bonewell's advertisement on page 24.

Mr. F. A. Kruse, of Waco, Neb., breeder of Duroc Jersey swine, announces on page 23 of this issue that he has several choice spring male pigs that he will price to sell. They were sired by Fashion Improver, Jr., by Fashion Improver, winner at the Nebraska State Fair in 1905. He also has some young gilts on which he will make low prices.

The herd boar at the head of Mr. Robt. J. Peckham's herd of Poland China swine, of Pawnee City, Neb., is Major Blain, by Blain's Tecumseh, a hog that weighed 900 pounds. The sows in the herd are royally bred, and all have good sized bone, feet, and also quality. Mr. Peckham is looking for orders for hogs of spring farrow. For further particulars in regard to the herd, see his advertisement on page 22.

Mr. W. A. Rankin, of Carson, Iowa, begins his regular card advertisement in this week's issue. He has 110 pigs this season and they are sired by Ohio Chief, Glendale Critic and Jim's Goldust. Mr. Rankin has some of the best pigs seen by our representative this year and he will be in line to furnish herd headers this fall. Our readers should remember "Billy" Rankin, because he has the goods this year. See advertisement on page 23.

Mr. M. A. McWilliams, of Wall Lake, Iowa, has 175 Duroc Jerseys now on his farm and he is growing them out for the fall trade. The major portion of these are sired by his well-known herd boar, Orion J., a son of old Orion and out of the great brood sow, Kruger's Maid. Mr. McWilliams has a whole lot of daughters and granddaughters of Duroc Challenger in the herd; three daughters of Tolstoy and one full sister to Crimson Wonder. He also has some Improver II. sows; besides, a number by other well-known boars which have made their reputations in some of the hottest shows in the West. He is going to be in line this fall with a splendid bunch of young boars, and he will be glad to hear from all his old, as well as many new, customers.

On page 24 of this week's Homestead will be found the advertisement of Messrs. C. W. Daws & Son, of Harlan, Iowa, breeders of Short-horn cattle and Poland China hogs. They have one of the most select herds of Short-horns in the state, and while not so large in numbers more than makes up in quality. Of the Scotch families represented in the herd are Victoria, Butterfly, Jassamine, Secret and Queen of Beauty. At this time they are offering a particularly nice lot of young Scotch and Scotch-topped bulls for sale, ranging in age from eight to fifteen months. One of the best of these, and a calf that needs no apology in any company, is a son of the noted Parsons bull, Nonpareil King, that was sold for \$4,000. His dam is Susan Lady Second, by Field Marshal, and he belongs to the Cruickshank Secret family. In this young bull Messrs. Daws & Son have one of the greatest of the year. He is just turned nine months, is a solid red in color, a blocky, low down, well-lined calf, one of those meaty, easy feeding fellows. His head and horn are ideal and could not be improved upon; his neck sits well on his shoulder; he is full over the crops, and has a good top and bottom line, with his body set on short legs, and is one of the best-quartered calves we have ever seen for his age. It will take some money to buy him, but the man who is looking for a herd bull or a bull with a decided show-yard promise can not afford to overlook him. One of the best Short-horn breeders in the state who was a buyer at the Tebo Lawn sale told the writer he saw young bulls sell there for \$1,000 and over that would not compare with this calf. They have a Cookson-hred bull, now fifteen months old, named Commodore, a richly-bred fellow and a good individual, that they have been using, and they will sell either one of these. They also have another good Nonpareil King calf, that is a very likely fellow and can be bought right. They also offer for sale a

richly-bred Victoria bull, sired by Imp. Lavender Champion, two good bulls by Banner Chief, a Cruickshank bull formerly used in the herd, and a Scotch Queen of Beauty bull. Messrs. Daws & Son have one of the best bunches of young bulls we have seen this season, and it will pay any of The Homestead readers who are looking for something good to go and see them. When writing please mention this paper.

Messrs. A. B. Easter & Sons, of Fremont, Neb., breeders of Duroc Jersey swine, write: "We have sold the Auditor to Mr. D. R. Cash, at Carlan, Neb., for a good price. He goes to head his herd. We still have the two yearling hogs that we have been advertising for sale. We also have twenty spring boar pigs got by Gold Dust Prince, he by Gold Dust Jim. They are good ones. We think we have pigs good enough to show this year, and we will probably attend the state fairs." See advertisement on page 22.

Ella Tharp, breeder of Rose Comb Brown Leghorns, of Mt. Sterling, Iowa, writes: "We can still furnish pure-bred Rose Comb Brown Leghorn eggs for hatching at reduced prices. Our hens are laying well and eggs are gathered carefully and kept in a cool, dry cave and are giving good satisfaction. Just received a letter from Mr. James Henderson, of Winnipeg, Can., saying he got seventeen fine chicks from eighteen eggs. I would also like to sell a few dozen two or three-year-old hens at \$10 per dozen, and with every dozen of hens I will put in a good male bird not akin to females." See advertisement on page 10.

Mr. S. G. Collicott, Lake City, Iowa, will make a public sale of Duroc Jerseys at his farm near town on Jan. 15, 1907. His present pig crop is sired by a hog called Crack-erjack 43487, and Jasper Jumbo 43785, a grandson of old Jumbo Red. The latter boar is the sire of all the fall stuff on the farm. He also has pigs by Leather Stockings 2d, Clovercroft Tip Top Notcher, and Adjuster, and they are out of granddaughters of Higgin's Model and Orion sows. Clovercroft Queen, a daughter of Orion II., has a litter by a son of Tip Top Notcher, and Clovercroft Lassie 4th, another granddaughter of Orion has a litter by Adjuster, the boar that stood at the head of Dr. Down's herd at Glidden, Iowa. He also has quite a bunch of sows sired by Belle's Chief 21085, a son of Patsy Bolivar. Mr. Collicott expects to select the best of these for his January sale.

Among the many beautiful Duroc Jersey hog farms in the state of Iowa few will compare with or are more ideally situated than that owned by Mr. John Weighton, of Audubon, Iowa. Lying on a beautiful hill slope about two miles from town will be found one of the most completely equipped hog farms in the West. With nicely arranged driveways and commodious hog lots made out of the most enduring woven wire fence and surrounded by the most up-to-date hog houses is where will be found the 300 Duroc Jerseys owned by the above-named breeder. Mr. Weighton is known to nearly all of the leading breeders as a man that bought the good stuff. He it was who, in company with Mr. F. E. Garrett, purchased the great Ohio Chief sow, S. E.'s Model, at the Sheldon sale, and she is now on his farm with a litter of six pigs by Proud Advance. She is one of the great sows sold last winter, and harring a little loss of flesh due to suckling a litter of pigs she is today as good as when she topped the Sheldon sale. Mr. Weighton has a few early litters that he is pushing along and they are in splendid shape. He has pigs by Audubon (his old herd boar), Proud Advance, Peerless Orion, Orion, Belle's Chief 2d, Junior Jim, Young Joker and Proud Advancer. These pigs are mostly out of Orion, Top Notcher, Improver II. and Sensation sows, and several granddaughters of Ohio Chief. The herd is under the management of Mr. J. B. Ashby, a graduate of Iowa Agricultural College, and a thorough stockman, and he is looking well to the wants of the growing youngsters. Mr. Weighton is going to be in line with a splendid bunch of boars this fall, and he will

be pleased to hear from any Homestead readers. He will have boar pigs that will be good enough to go to any herd, and he will like nothing better than to have his customers drop in and inspect his herd and make their own selection. His advertisement will be found in these columns later in the season, when we will have more to say about what he has to sell.

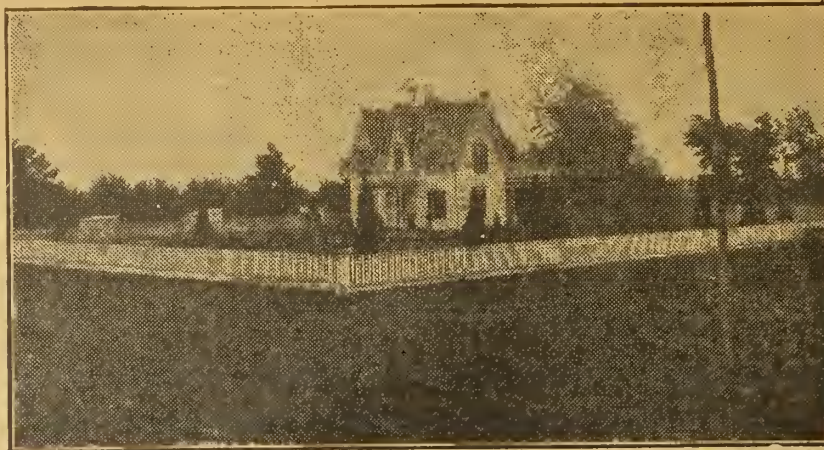

Mr. Claud Huffman, of Scranton, Iowa, one of the young and enterprising Duroc Jersey breeders, is rapidly coming to the front as a promoter of the red hog. Mr. Huffman has not been breeding Durocs as long as some of the boys, but he has been breeding them long enough to know how to produce some good ones. As a hustler he is strictly in it. Only last week a race meeting occurred at Scranton, and of course the people from the surrounding country were there and so was Mr. Huffman with a bunch of pigs. He was alert to the fact that it was a good place to advertise and so constructed three or four nice pens on the ground, and everyone that passed through the gates became acquainted with the Huffman Durocs. He has about 100 spring pigs, mostly sired by Larchwood Echo 40415, the boar now at the head of the herd. He has two good litters by Proud Advance 2d out of King Perfection dams. The blood of Malcom's Model, Crimson Wonder 1 Am, Orion and King Perfection predominates in the herd. He will make both a fall and spring sale, which we will announce in due time.

Messrs. J. W. Reynolds & Son, Defiance, Iowa, have close to 100 Duroc Jersey pigs this year. They are strictly in it with what they have and expect to go out with the boys this fall. At the head of their herd is the boar, Victor, considered to be the best son of Improver II. He is one of the largest boars of the breed and he has done excellent work in the Reynolds herd. They have few pigs by him, owing to the fact that nearly all the sows in their last sale were bred to him. A lot of their present crop is sired by a boar called I Am Pottawattamie, a grandson of Nebraska Belle. They have a nice litter out of a daughter of Ohio Anna VIII., the dam of Crimson Wonder, and her pigs are sired by old Persicles. They have a few good litters that they are pushing out for the fairs, and they are growing and well developed and will uphold the Reynolds colors at the fall shows. One of their best litters is out of Lady Marti, and are sired by I Am Pottawattamie, and another good litter is out of a daughter of the sweepstakes boar, Gold Dust Jim, and are sired by R. L.'s Perfection. They have a good fifteen-months-old boar that they are preparing for the fall shows, and he has several strong points in his make-up. He has a good head and ear, his color is all that could be desired and he has a spring of rib that will please them all. He is an easy keeper and the boys will catch a glimpse of him at the fairs if nothing happens him. Our readers can secure a good boar of the above firm, and they will be pleased to hear from them.

The following letter will give the breeders an idea as to the trip made by Mr. Morrison in search of a herd header. Mr. Morrison has one of the royally bred herds of Durocs of the West and his show herd of sows are hard to beat. He has added the great Kant Be Beat and will cross him on the grand sows he now has in the herd. Such sows as Alix 2d, Bessie H., Sutton Lady, Miss Bob, Rose Orion, Village Pride, Parnell B., and Van's Lady ought to make a great cross with the boar mentioned. Messrs. Morrison & Son are now billing orders for the Ohio Chief pigs. Read the following letter: "I have only just returned from an extended trip among the Duroc Jerseys in Iowa, Illinois, Indiana and Ohio, having visited many of the larger and not a few of the less important herds in these four states. The immediate purpose of this trip was the purchase of the greatest Duroc Jersey boar in the world and more remotely the visiting of all these history-making herds and the meeting of all these amiable gentlemen who, for so long, held in their hands the destinies of the Duroc Jersey. If space were only adequate I should like to make itemized acknowledgment of all the courtesies of which I was the recipient during this most pleasant trip. Since this is impossible I may only hope, that sometime, we may entertain in our own homes some of these pleasant mannered gentlemen in part payment of my obligation. It was not at all difficult to decide upon what boar we wanted before leaving home, but the nearer I got to the home of the great Kant Be Beat the greater was my trepidation and the oftener the thought, 'What if they won't part with him at any price?' assailed me. Having reached the farm of Watt & Foust at Xenia, Ohio, and having succeeded in getting them to name a price the details of the transfer were promptly arranged. With much less jockeying than usually attends a deal of this importance the boar was paid for and crated and shipped via Adams Express to Lincoln, where he arrived in perfect condition and is now very much at home on our farm at College View. Of the great quartet shown at St. Louis, Kant Be Beat has shown himself by long odds the most prepotent sire. The prizes won by Kant Be Beat and his get are greater in number and outweigh in importance the winnings of any other sire and get living or dead. Kant Be Beat was five years old the first day of the current month and year. It will be remembered that at St. Louis he weighed just a few pounds over half a ton. He is sound and active and is as eager as one could well wish. On Tuesday, the fourteenth of June, we bred our great sweepstakes sow, Alix II. On the thirteenth we bred our first prize Van's Lady; on the twentieth we bred out great second prize sow, Sutton Lady (dam of first prize boar at Iowa in 1905), and on the same day we bred our great yearling out of Miss Bob by Crimson Wonder, litter sister to Dr. Wilson's great sow that topped our February sale at \$410. Our pigs are doing nicely and inquiries for breeding stocks are coming in in bunches. Everything looks to the most prosperous season in the history of the breed."

LAURIE'S DUROCS.

Mr. T. E. Laurie, of Jacksonville, Ill., is offering a select lot of fall boars for sale at \$25 each in his announcement on page 23 of this issue. They are of the large, heavy-bodied type and their breeding represents the

ONE OF THE BEST HOMES IN THE STATE OF MISSOURI.

A FARM of eighty acres, joining the city limits of a town of about twelve hundred; this town has a good bank, good school and good churches, two railroads, fifty miles from St. Joseph and Kansas City. This farm is good, productive soil. Price eight thousand dollars, one thousand dollars down to bind the trade, two thousand dollars the first of March, the balance of five thousand dollars, to be paid to suit purchaser at five per cent interest. We have a farm for YOU, if this one is not the one for you. For further particulars write or call on

J. W. EVERMAN,
GALLATIN, MO.

best blood of the breed. In our issue of next week we will give a full description of the stock which Mr. Laurie is offering for sale. In the meantime readers of this paper will do well to write Mr. Laurie at once for full information. Kindly mention this paper.

BERKSHIRE SOWS FOR SALE.

On page 23 of this week's Homestead will be found the advertisement of Mr. John C. Miller, of Harlan, Iowa, who offers to sell twelve head of Berkshire sows. These are bred for fall litter to his 800-pound boar, Milo, a son of the noted King Starlight, and to Royal Combine 2d, a Barker-bred boar. If any of our readers want Berkshire sows they should write Mr. Miller at once.

GASOLINE ENGINES.

The Gilson Manufacturing Company, of Port Washington, Wis., are making a very liberal offer on gasoline engines in their advertisement on page 10. Their illustrated catalog will be sent to all who are interested in the market for gasoline engines. Their engines have stood the test wherever they have been used and anyone wishing to secure a good gasoline engine at a reasonable price will do well to correspond with this company at once as per the advertisement, kindly mentioning this paper.

GRIFFITHS' DUROC JERSEYS.

Mr. H. B. Griffiths, of Bowen, Ill., is offering a very good lot of fall boars in his announcement on page 23 of this issue. They are sired by Tip Top Notcher, Griffith's Banner, a grandson of The Lad For Me, and a few by Big I Am. In our next issue we will give full information regarding this herd, but would advise our readers who are in the market for good herd boars to write or visit Mr. Griffiths at once. Kindly mention this paper when writing and watch for full particulars regarding this herd in our next issue.

C. MCCARTHY HAS DUROCS.

The writer had the pleasure of inspecting the herd of Durocs owned by Mr. C. McCarthy, of Charleston, Neb., recently and found this gentleman well supplied with spring pigs. The present crop will number about seventy-five of mostly March and April farrow. We noticed several very promising pigs among the lot. The herd is well represented in the blood of Crimson Wonder, Orion and others of note. Mr. McCarthy will hold a brood sow sale in the winter. This same gentleman is the owner of a very strong lot of Short-horn cattle. You will hear more of him later.

HOW ABOUT THOSE CHESTER WHITES?

"Where can you find Chester White hogs?" has been asked us several times. One of the good breeders of this strain is Mr. Jno. Cramer, of Beatrice, Neb. Mr. Cramer has been in the business for some time and is well posted on the breed as well as being a competent judge of the type that breeds best. This gentleman has shown his hogs at some of the best shows and has won his share of ribbons on them. His herd is very strong on individual merit and will undoubtedly please you should you place an order with him. Write for the breeding of the hogs, etc. This gentleman shipped a great number of hogs out last year and has given good satisfaction.

TANNER'S HERD OF POLANDS.

Mr. Fred Tanner, of Beatrice, Neb., is building up a herd of Poland Chinas which represent the very best of blood lines. The early pigs were somewhat handicapped by the bad weather. Mr. Tanner recently received a fall boar sired by the great On and On. This hog cost Mr. Tanner \$160. He tells us that he is going after the best that money can buy. The same fall pig has lots of quality and finish; his dam was by E. L. Perfection. She sold in one of Mr. Young's sales for \$450. The sows in the herd are sired by such noted hogs as Mogul, Meddier, Lobb's Chief, Mischief Maker and others as well known to the breed. Mr. Tanner is offering a splendid fall boar for sale sired by Lobb's Chief (winner at Nebraska State Fair). If looking for a boar write this gentleman.

CLOVER WAVE DUROCS.

With this week's issue appears the advertisement of Messrs. Stow & Gingrich, of Hamburg, Iowa, owners of one of the best Duroc Jersey herds in the West. They have 110 spring pigs out of daughters of Orion, Proud Advance, Long John, Peerless, Belle's Chief, Van's Perfection, Belle's King, Gold Dust Jim and Orion Dandelion. Any of our readers wanting a good pig can very easily secure it from this herd. These pigs are sired by Red Orion 28793, a son of old Orion 5293; Duroc Standard, a grandson of King Perfection on the sire's side and a grandson of Duroc Challenger on the dam's side, and Belle's King II. by Belle's King, a son of Echo King and Nebraska Belle. They also have pigs by Critic's Echo, a son of the prize-winning boar, Glendale Critic, and Brighton Wonder, a full brother to the noted Crimson Wonder. The readers of this paper who will be in line for a boar this fall had better figure with the proprietors of the "Clover Wave Herd," as they will be able to furnish some extra good ones. There isn't a better bred herd in the West. Write them what you want and you will be sure to get

the best. Their motto is, "first come, first served," and when you buy of them you can put it down that you are buying from one of the most reliable Duroc Jersey firms in the West. See advertisement on page 23.

"THE KIND OF EDUCATION FOR BOYS ON THE FARM."

Years ago the idea prevailed that the boy on the farm did not require or need much education. Our forefathers were of the opinion that the education their sons needed most was a knowledge of how to farm. Today the farmer who has business ability finds that much of his success is attributed to being able to make the most of his environments. He finds that his knowledge of business ways and methods are a big help in this respect. The fact that most of the successful men in this country, from the president to the heads of the large mercantile establishments, were boys from the farm, ought to be an incentive to the young farmer boy of today to look ahead with bright prospects. Nowadays a business education can be acquired so much quicker, so much easier and so much cheaper that there is little reason for the boy on the farm not being equipped with a business education. We wish to call attention to one of the most successful business colleges of today. The celebrated "Gem City Business College," of Quincy, Ill. Here the student can find the right kind of training, because they teach by actual, practical methods. You learn to do business by actually doing it and not by memorizing text books. Being locat-

ed in a modern, but medium sized city makes it possible to obtain home boarding at a very reasonable cost. It will pay you to refer to their advertisement on page 6, and write them for their sixty-four page illustrated catalog, which will be mailed free to all who address President Musselman, 205 Musselman Building, Quincy, Ill.

HAMILTON'S DUROCS.

One of the good bunches of Duroc Jersey pigs that we have seen in Nebraska is owned by Mr. T. J. Hamilton, of North Bend. He has ninety spring pigs and seventy-five of these are of March farrow. He therefore has more uniformity of size than will be found in most herds. The major portion of these are sired by Hamilton's Improver, a son of Improver II., out of Gipsy Maid by Briggs' Model. He has, however, one litter by Belle's Echo, the boar that topped the Frank Fentress sale, and this litter is out of a Red Knight sow. Another litter is by Jumbo Perfection, and out of Hambletonian Girl by Hambletonian, the first prize boar at Nebraska State Fair in 1904. The litter out of the Red Knight sow is a Nebraska Belle-Echo King combination, and is going to make desirable stuff for breeders this fall. Among his best and most advanced litters are two out of granddaughters of old Higgins' Model. One of these sows has five pigs and the other has seven, and they will catch anyone's eye. There are some extra good pigs among these, and are deserving inspection on the part of breeders in

search of something for future use. Mr. Hamilton is now using a son of Crimmon Wonder out of a daughter of West's Banker, and several sows are bred for fall litter to this boar. He will make a public sale on November 13th, at which time he will sell his select boars and will put in a number of good gilts. The boars that go into this sale will be the select of this season's crop, and as he is not sparing with the knife, buyers can feel that they will meet with a right good offering in this sale.

GOOD DUROC SPRING PIGS FOR SALE.

Mr. A. Wilson, of Bethany, Neb., has one of the good herds of this section and he is in line to please any man looking for a good boar of spring farrow. Mr. Wilson is the gentleman that topped the J. M. Morrison sale last winter after paying the reasonable sum of \$400 for a very good gilt sired by Crimmon Wonder and safe in pig to the great Ohio Chief. Mr. Wilson will price these boars worth the money. He will hold a sale this fall and has a choice lot of pigs to select his offering from. Look up the advertisement on page 23.

SHELDON'S DUROCS.

On page 23 will be found the Duroc Jersey advertisement of Messrs. Sheldon Bros., successors to Messrs. H. C. Sheldon & Sons, Shaunon City, Iowa, a firm that is known wherever the red hog is grown. They have 100 pigs sired by the noted boar, Proud Advance, considered one of the greatest boars known to the breed. They also have boars sired by the World's Fair boar, Ohio Chief, by Alix Pride, a full brother to the sweepstakes sow, Alix II, and by Top Notcher R. They have a bunch of boars that they say are equal, if not superior, to anything they have ever bred, and they will be glad to hear from any of The Homestead readers who are in need of a herd header.

KIRKPATRICK SELLS DUROCS.

Mr. W. A. Kirkpatrick, of Lincoln, Neb., recently started a breeder on the right road to success by selling him twelve sows from his well-known herd. Mr. Kirkpatrick has delivered the sows and they were up to the purchaser's expectations in every way. This speaks well for the Kirkpatrick herd. He has any number of choice things left on the place that will be priced right. The price on the dozen sows sold was \$600. The sows were bred and will undoubtedly prove good for the purchaser in the way of litters and good individuality. If you are looking for a herd header or a few sows to strengthen your herd you should write the above-named gentleman at Lincoln, Neb. Look up his advertisement on page 23. Please mention The Homestead when writing.

CORN HARVESTERS.

H. L. Bennett Company, Westerville, Ohio, are offering special inducements on corn harvesters in their advertisement which appears on page 4 of this issue. These harvesters are among the very best on the market, well made in every detail, and they will do the work. This company have made a very low price, considering the excellent machine they are selling, and knowing how well it does the work, feel certain that every farmer who purchases one will wonder how he has gotten along for so many years without one. We would ask all of our readers who may be interested in corn harvesters to write the H. L. Bennett Company for their new catalog and price lists, which will give in detail a complete description of the machine they are selling. By kindly mentioning The Homestead your request for catalog will have immediate reply.

A CORRECTION.

In the advertisement of Messrs. M. W. Greer & Son, of Rushville, Ill., breeders of Duroc Jersey swine, it was stated that they were offering a number of fall boars by Tip Top Notcher. These boars are not now offered for sale, but are being reserved for the fall sale to be held on October 22d. However, Messrs. Greer are offering a fine lot of fall boars by Oom Paul and several of them grandsons of Tip Top Notcher. They are of the herd header type and should be taken up at once by breeders wanting herd boars. Since Mr. Geo. W. Seckman, of Ripley, Ill., has decided to close out his herd in October, the date, February 5th, claimed by him for brood sow sale has been allotted to Messrs. Greer. Breeders who are wanting something good should write or visit Messrs. Greer at once, who will, if notified, be pleased to meet anyone interested in Durocs, at Rushville. Kindly mention The Homestead when writing as per the announcement on page 23 of this issue.

READ THE TESTIMONIALS—THE AUTO-FEDAN HAY PRESS NO LONGER AN EXPERIMENT.

"Wolf, Wyo., Feb. 20, 1906. We have just given our banker orders to send you money for the hay press. We have given the press a good trial and are well satisfied with it in every way. Our hay is mostly heavy timothy, with clover and alfalfa, and we have been a little skeptical about a self-feed handling this long stuff well, but the machine works in every way O. K., and we think it is the best self-feed we have ever seen or tried. We have had no trouble at all from the beginning. We just put the machine together and went to work with it and we are in every way well satisfied. Yours truly, Rohwedder Bros." "Have baled about 250 tons of alfalfa with the press and find that it does first-class work in every respect. The self-feeder makes it entirely safe to work with. Chas. Cook, Las Animas, Colo." "I am more than pleased with my press. I don't have to help it; it helps itself if I put the hay in the hopper. J. H. Akers, Sibley, Mo." "The press is a dandy. Have not had a bit of bother. It bales straw as fast as we can feed it. Frank Dumott, Elk City, Kan." "The press we sold is giving good satisfaction and the party is well pleased with it. J. Ed Rankin, Latham, Kan." "In baling from windrow I save from forty to fifty cents a ton with the Auto-Fedan, as two men can operate it easily. It also does the finest kind of work out of stacked hay. F. H. Bayer, Toronto, Kan." "I baled about 250 tons with the Auto-Fedan and saved ninety-eight cents a ton over the expense of hiring my hay baled last year, so I saved the cost of the press the first season. V. S. Cantrell, Vernon, Kan." "I baled seventy-seven tons in five

days from stacked hay. J. G. Brown, Stuart, Neb." Write the Auto-Fedan Hay Press Company, 1062 Jefferson St., Topeka, Kan., mentioning The Homestead. They will tell you all about it. See advertisement on page 8.

SENATOR 241887 FOR SALE.

The above richly-bred young Scotch bull is offered for sale by Mr. J. D. McDermott, Anita, Iowa. He is a son of Imp. Fashion Favorite and is out of Imp. Augusta Bruce, one of the best cows in the McDermott herd. This young bull is fit to head any herd, and will be priced within the reach of anyone wanting a good herd bull. Write Mr. McDermott about him or go and see him.

HENRY BROS.' POLAND CHINA BOARS.

On page 22 of this week's Homestead will be found the double column advertisement of Henry Bros., well-known Poland China breeders, of Le Mars, Iowa. They are now offering for sale a bunch of thirty fall boars, sired by Matchless Perfection, the \$500 son of Chief Perfection 2d, Matchless Perfection Jr., the sweepstakes boar at the Interstate Fair, Meddler Boy, a son of the World's Fair boar, Meddler, and Correct I Know. They also have about forty spring boars sired by the same boars and they are now booking orders for these. The boys have an excellent crop of boars this year, and they can fill your order at any time from now on. Kindly write them at once and mention The Homestead.

A NEW DUROC JERSEY FIRM.

It is with pleasure that we call attention to the new Duroc Jersey firm of Messrs. Sheldon Bros., Shannon City, Iowa, who have purchased the well-known herd of Messrs. H. C. Sheldon & Son, and who will hereafter conduct this herd along the same line as has heretofore been done. Messrs. Sheldon Bros. are excellent hogmen and are thoroughly in touch with the business. The Cedar Grove herd is one of the foremost in the West, and Messrs. Sheldon Bros. intend to keep it in the front row of the Duroc Jersey procession. They have about 100 pigs sired by Proud Advance, one of the greatest boars of the breed. They also have pigs by several other of the best boars, and the pigs are doing fine.

THE GREAT OHIO CHIEF.

Beginning with this week's issue appears the advertisement of R. J. Harding, of Macedonia, Iowa, and C. E. Osborn, of Weston, Iowa, joint owners of the noted Duroc Jersey boar, Ohio Chief. This hog is undoubtedly one of the greatest living Duroc Jersey boars. He is not only a World's Fair winner, but he is a proven sire, and today the get of no other hog is in such demand as the get of Ohio Chief. Both Mr. Harding and Mr. Osborn have a lot of his boars as well as his sows on hand, and they are meeting their every expectation. Mr. Harding will make a public sale on October 3d, and Mr. Osborn on October 4th, at which time these two breeders intend putting in the tops of their herds. They will be pleased to hear from any of our readers at any time and will tell them just what they have on hand.

A RELIABLE LAND COMPANY.

The Geo. W. Johnson Land Company, of Gary, S. D., whose advertisement has been appearing for some time on our land pages, is a most thoroughly reliable one in every respect, and our readers who may have business transactions with this firm will find their deals promptly attended to and also that everything is exactly as represented. These lands which are offered for sale are some of the very best to be found in South Dakota and southern Minnesota, so that our readers may depend upon it that the terms will bear the closest inspection. Mr. Johnson, the head of the firm, we have known for a good many years and have purchased property from him, so that we can speak for his honesty in any deal he may make. Read the advertisement on page 15 and then write for a descriptive catalog of the farms this company have for sale.

OAKVIEW DUROCS.

One of the best herds of Duroc Jerseys inspected by the writer, a representative of this paper, this season is that owned by Mr. J. Coy Roach, of Girard, Ill. It will be remembered that Mr. Roach was the purchaser of Helen Blazes III., the first sow that ever sold for \$1,000 in the history of the Duroc Jersey breed. He is a man who has been breeding Duroc Jerseys for a number of years and has made a record in the show ring that is worthy of credit to any breeder. He has some extra good pigs for the season's trade sired by Model Chief. This boar is the son of Ohio Chief and has proven himself a most valuable sire. Last winter Mr. Roach sold Model Chief to Messrs. C. W. & Wm. Reed and afterward went to the herd of Messrs. Reed in Iowa and tried to buy him back. They were so well pleased with Model Chief that they refused to put a price on him. Mr. Roach has five litters sired by Model Chief that are even, uniform and growthy and a better lot is seldom found in any herd, the get of one boar. Another good litter is by Advance and out of a Duroc Challenger II. dam. A litter which gives promise of making something extra good is sired by Sandow's Best 46413 and out of Jay's Belle 39128 (A.). This sow was sired by Reading King 11713 (A.), he by Morton's King 8725 (A.), dam Duchess Model 26590 (A.) by Walt's Col. 5795 (A.) Few better producing sows are found in any herd and her present litter by Sandow's Best will certainly find ready sale at good prices in the fall sale which will be held November 3d. Sandow's Best 46413 was sired by Sandow 14711 (A.), a boar which won first in the under year class at the Illinois State Fair in 1904. His sire, Protection Chief 12223 (A), was shown the year before and won second place, being defeated by Tip Top Notcher. Mr. Roach sold Protection Chief for \$150, which was at that time a very good price for a Duroc boar. Mr. Roach is now offering for sale a select lot of January boars sired by Model Chief. They are of strictly show-

FREE LANDS FOR HOMESTEADERS IN THE Shoshone Reservation of Wyoming

Uncle Sam will give everybody entitled to take up homesteads a chance at these lands, comprising approximately 1,150,000 acres. It is estimated that between 300,000 and 400,000 acres are first-class agricultural lands susceptible of irrigation. The remainder are grazing, timber and mineral lands.

To secure a homestead you must register at one of the points designated by the government on any day from July 16 to 31, 1906.

The Burlington Route will sell very low-price round-trip tickets daily from July 12 to 29, inclusive. Those who make sure their tickets read to Worland, Wyo., have the great advantage of reaching the reservation over the Burlington's line thro' the heart of the Big Horn Basin. To see this rich irrigated section is worth any man's time and money.

For further information, just fill out and mail this coupon TO-DAY.

yard type and their breeding cannot be equalled, they being grandsons of Ohio Chief. Breeders wanting a good herd boar will do well to write or visit Mr. Roach as per the announcement on page 23 of this issue. Kindly mention this paper when writing.

RUSSELL'S DUROCS.

Duroc Jersey breeders will be interested in knowing that Mr. E. Z. Russell, of Blair, Neb., has a crop of 200 pigs from which to select herd headers this year. Among these are pigs sired by Glendale Critic, the well-known prize-winning boar, and the sire of the first prize boar and sow pig as well as the first prize litter at the Iowa State Fair, Nebraska State Fair and Interstate Fair. He also has pigs by Critic's Echo, one of the promising show boars of the year, as well as by Malcolm's model and a few other boars. Write Mr. Russell if you are in need of a pig. He will be able to attend to your wants.

THE JOE YOUNG POLAND CHINAS.

Readers of The Homestead have become familiar with the Poland China herd of Messrs. Young & Duncan, Madison, Neb., more commonly known as the "Joe Young herd," and advertised last year through the columns of this paper. This is one of the good Poland China herds of the West, and few herds indeed can show as many first-class brood sows as will be found here. They are with us again this year and their advertisement will be found on page 22 of this week's issue. They are offering twenty-five head of good fall boars for sale, and they also have about fifty head of spring boars that they would ship at any time. The fall boars are sired by My Price, one of the best sires ever used in the herd and one of the best boars in his day in the West. A few are sired by Perfection, a grandson of old Corrector. These are a very lengthy, growthy and well-developed bunch, possessing ample bone and abundance of finish. They are pricing these boars right if taken soon, and the first to come will be the first served, and, of course, will get the best. They also have a splendid lot of spring boars sired by Grand Mass Chief, a grandson of old Chief Tecumseh 2d; Matchless Perfection Jr., the sweepstakes hog at the Interstate Fair last year; Oakland's Prospect, and T's Tecumseh, two of the best sons of the noted boar, Blair's Tecumseh; one litter by Nebraska King, first-prize boar at Nebraska State Fair in 1904, and one litter by Nemo L's Oakland, a son of Nemo L's Dude. A number of the brood sows in this herd are sired by Sure Per-

fection and Good Investment, two as good boars as were ever used in the West. The herd is strong on good brood sows, not only good individually, but of the producing kind. They are fitting a good show herd this year, headed by an excellent boar called High Looker by High Top, the great show boar in the R. E. Bryan herd in Illinois. They will be at the Iowa State Fair, the Nebraska State Fair and the Interstate Fair, where they will be pleased to grasp hands with their old friends and make the acquaintance of new ones. If any of our

readers are in the market for a good fall boar, or a good spring boar, it will pay them to write Messrs. Young & Duncan, or go and see their herd. They will also sell a few sows bred for early fall litter. Please mention The Homestead when writing them.

WHEELER'S HEREFORDS.

One of the best Hereford herds in Iowa, or in fact the West, is owned by Mr. W. W. Wheeler, of Harlan, Iowa. We make this assertion unreservedly, and say that there are to be found in this bunch of cattle more broad-backed, big, Hereford cows, combining not only scale, but smoothness, than can be found in any other one herd in the West. The herd is headed by one of the greatest living sons of old Beau Donald, and the females represent the choicest strains known to the breed. Mr. Wheeler has gradually selected this herd from among the best herds in America, and whenever he knew of a well bred cow being offered for sale, whose individuality was in keeping with her breeding, he bought her. To our Hereford friends, and especially our best breeders we will say that it will pay them to visit the Wheeler herd and see what is destined to become one of the most noted herds in the West. Just now he has about nine young bulls for sale, all strong, lusty fellows. If you want one call and see him.

A REMEDY THAT CONTINUES.

Spavin, to many horse owners, is an ailment greatly to be dreaded. They regard it as something almost incurable. Others, who have had more experience, regard it but lightly. There is no chance for its long continuance without notice, and, if treated promptly, it can easily be cured by that standard, stable remedy, Kendall's Spavin Cure. The cure will be permanent and no sign of the injury will remain. Even cases of long standing are often cured. It is possible that all, except the very oldest and stubbornest, will yield to this treatment. There are also a number of other ailments of horses, consisting of unnatural bony growths, which would, from their nature, yield to the same sort of treatment. We mention ring-bones, curbs and splints. All of these do, as a matter of fact, when taken in time, yield readily to a proper use of Kendall's Spavin Cure. This remedy, as well as the admirable little book, "A Treatise on the Horse and His Diseases," which may be had free from druggists or the Dr. Kendall Company, should have a place in the stable of every horse owner.

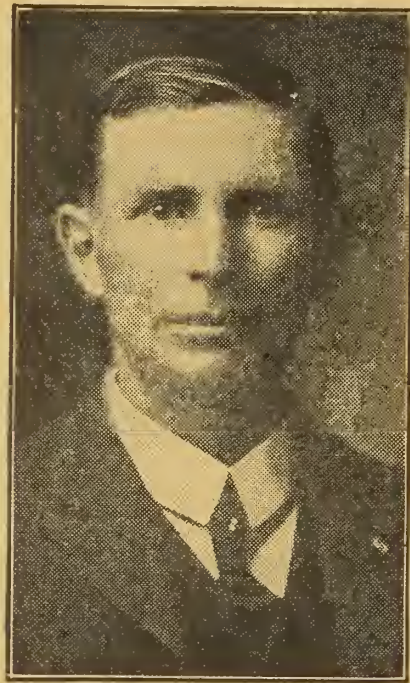

W. A. MERRYMAN'S ELM GROVE HEREFORDS.

In company with Col. Harry W. Graham, of Chillicothe, Mo., (one of north Missouri's best known live stock auctioneers) a representative of this paper recently spent a most enjoyable and pleasant day inspecting the Elm Grove Herefords owned by Mr. W. A. Merryman, of Laredo, Mo. Mr. Merryman owns one of those fine, large stock farms, such as Missouri is noted for, and for the past fifteen years has been actively engaged in the breeding of his favorite cattle, "the whitefaces." Two herds, one a herd of pure bred, consisting of upwards of fifty head, and a herd of high-grades, consisting of upwards of 100 head, are kept, but on separate farms. That Mr. Merryman is a lover of good cattle is best proven by a trip through these herds. Each is headed by bulls that have been selected for their individual excellence and both are bulls that are well bred and it would not be out of the way to say fashionably bred. Among the females in the herd of pure-breds are cows that were bred by such breeders as C. H. Curtis, of Eminence, Ky.; C. G. Comstock & Son, of Albany, Mo.; Cornish & Patton, of Osborn, Mo., and Overton Harris, of Harris, Mo. The blood lines are of the best and such sires as Beau Brummel, Gentry Briton 6th, Beau Donald, Improver, Corrector, Wilton Anxiety and Iron Founder 1st appear close up in the pedigrees. While Mr. Merryman was careful to get good pedigrees, it is evident that the individual was the first consideration and as a result his cows and heifers show a degree of excellence seldom found in herds that are, and have been, kept more prominently before the public. Of the high grade herd too much cannot be said, for it is doubtful if another such herd could be found in several days' travel. For fifteen years past the best bulls obtainable have done service in this herd of high grades; the best heifers have been retained for brood cows and as a result

few pure-bred herds in Missouri can show superior individuals. Right here is where the farmer who is, or contemplates, producing steers for the market can gain much valuable information, as for the past six or eight years the car loads of fat steers from this herd have topped the market at Chicago on the days they were sold. To Mr. Merryman this must have been the source of much satisfaction and profit and it is to be regretted that on September 28th, on account of his numerous business interests in Laredo, Mr. Merryman will disperse his herds preparatory to leaving the farm. Grundy county, Mo., will lose one of the better herds of pure-bred cattle in North Missouri and at the same time a herd of high-grade cattle that have been, and would continue to be, could they be kept intact, an object lesson such as is seldom found. It is to be hoped that Mr. Merryman's cattle will be appreciated to such an extent that many will stay in his home county, as no locality can help feeling proud to have such cattle within its borders.

KRASCHER'S DUROC JERSEYS.

It is a source of satisfaction to any breeder to see stock of his breeding doing well in the hands of his fellow breeders. Such is the case with Messrs. Fred Kraschel & Son, of Macon, Ill., breeders and owners of one of the best herds in the middle West. We present a fair likeness of Mr. Melvin A. Kraschel, the junior member of this firm, in these columns. He takes an active interest in the swine breeding industry and was unanimously elected president of the Illinois State Swine Breeders' Association in January, being the first and only Duroc Jersey breeder to hold this position. His father, Mr. Fred Kraschel, enjoys the confidence of every breeder who

has had the opportunity to meet him or come into communication with him by mail while purchasing stock from him. There are two very important rules or principles of business which Messrs. Kraschel have adhered to—never ship out anything but the best, and send stock true to description. These fundamental principles of the breeding business have made the name of this firm known as thoroughly reliable and trustworthy. By careful selection and proper mating with a definite ideal or type in view Messrs. Kraschel have been able to produce stock which have brought them much praise in the show ring and others of their breeding have won for their fellow breeders. A notable instance of this character is found in Buddy K. IV., the champion Duroc boar at the Illinois State Fair last year. He was bred by Messrs. Kraschel and shown by Mr. Ed. A. Baxter, of Pawnee, Ill., and the contest narrowed down to a hog shown by Messrs. Kraschel, Mayor Jr., and Buddy K. IV. The judge placed Buddy K. IV. as champion and the first man to congratulate Mr. Baxter was Mr. Kraschel. A kindly feeling toward all, and a disposition to promote the interests of the breed, have made this firm one of the most popular east of the Mississippi. During 1904 Messrs. Kraschel showed their stock at Illinois State Fair and won first in class and sweepstakes on Gold Cloud, one of their present herd boars, and a breeder of prize-winning stuff. The same year they won second on under year boar, second on gilt under six months, first on produce of sow, and second on young herd. In 1905 they were again successful at the same show, winning first on yearling boar, Mayor Jr., second and third on boar pig under six months, third on sow under one year, third on sow pig, third on produce of sow, third on young herd, and second on aged herd. During the brood sow sale season Messrs. Kraschel topped the L. W. Cross sale, T. W. Stoner & Son sale, were next to top at the McNeil Bros. sale, topped the Ed. A. Baxter sale on gilts, and in the Geo. W. Seckman sale were persistent bidders on the best lots, securing two head at high figures. At the Browning sale they, together with Mr. Ed. A. Baxter, were the last bidders on all of the \$1,910 litter but Helen Blazes III., and secured one of this litter at \$260. She has raised a nice litter sired by Golden Echo, a very good boar which topped the male portion of Messrs. Kraschel's fall sale. Substantial help such as was given to breeders at the various sales by this firm will not be forgotten. It is one of the best evidences that Messrs. Kraschel have faith in the future of the Durocs. We wish this week to call attention to some of the good litters which will be offered for sale at this time and which are included in the fall sale, the date of which is November 2d. A fine litter of eight pigs by Top Notcher Chief, junior champion at World's fair, is out of Queen Advancer 107590, she by Advancer 28773, dam Fashion Queen

XV. by Duroc Challenger II. 13169. This litter numbers eight and came in April. A litter by Hanley is out of Daisy Mc, she by Cantine Boy and next to highest priced sow sold in Messrs. McNeil Bros' sale. A very good litter of eight sired by Mayor Jr. is out of Lady Blue, she by La Belle's King 14617. This litter have a great future and resemble their noted sire, Mayor Jr., in many ways. One of the best litters in the herd is by Gold Cloud and out of Prosperity Belle 94622. They have a right to be good, as this sow has been one of the most valuable producers in the herd. Her sire, Prosperity Bill 12107 by Ben Davis 10513, was one of the first hogs used by Messrs. Kraschel and his get have in every case been profitable, prolific breeders. A litter which will no doubt attract attention is sired by Roland and out of top gilt in Baxter's sale. They are uniform in type, growth, color and finish and should be heard from. A litter that bids fair to be in the money at the coming shows is sired by Mayor and out of a Buddy T. sow whose dam was Owaneco Belle, one of the best sows in the herd and a half sister to Gold Cloud. Lack of space forbids mention of all the litters in this issue, but we will make further mention in future issues. Any reader of this paper interested in good Duroc Jerseys can do no better than visit this herd before making final selections. They are pleased to show their stock and furnish any information regarding same. We take pleasure in recommending this herd to our readers and are sure that the best treatment will be given to all. See announcement on page 23 and write at once, kindly mentioning The Homestead.

CLOVER WAVE DUROCS.

To own one of the best Duroc Jersey herds in Iowa and the West was the desire of Messrs. Stowe & Giugrich, Hamburg, Iowa, and with that very laudable ambition in view they started out by buying the best foundation stock that money could secure. Few herds in Iowa, therefore, can boast of as many good brood sows as will be found in this herd. For herd boars they have used Red Orion (a son of old Orion), Belle's King 2d (a son of Belle's King), as well as several other good boars that were bred along the most approved lines. At the head of the herd now is Duroc Standard 4417, a son of Duroc Paragon and a grandson of King Perfection on the sire side. His dam is Paullina Queen II. by Duroc Challenger, and she is one of the best sows in the West herd. This boar

is about the best one they have ever used in the herd, and he is proving a good breeder, and the pigs now on the farm will bear us out in this statement. He is a hog of good scale for his age, with a good ear and a reasonably good head, an unusual spring of rib, a good color and an abundance of good bone. He is an easy keeper, and knowing his blood lines for generations behind him we predict a bright future ahead of him. In fact, we saw some pigs sired by him that should make the very best hogs by fall. The greater number of the pigs on the place are sired by this boar. Among the many good sows in the herd are Rosebud's Pride, the sow that topped the Manley & Co. sale as a gilt in 1905 at \$410. She is a daughter of the great boar, Proud Advance, and is out of a Jumbo Red dam. She was considered the great gilt of that year, and time has not lessened the high opinion bestowed upon her by the critical buyers of that season. Had she been sold in their sale last winter when prices were soaring skyward, there is no telling what she would have brought. She has a splendid head and ear, characteristic of the get of Proud Advance, and she has a ham on her that cannot be heated and is seldom equalled. In fact, she is a sow all over. She has a good litter of eight pigs by Duroc Standard that promise well if nothing happens them. Red Light, a daughter of the sweepstakes boar, Gold Dust Jim, with a daughter of Improver II. for a dam, is another good brood sow in this herd. She cost \$200 at the E. Z. Russell sale, and she has nine good pigs by Critic's Echo, and they are strictly all right. There are five boars and four sows in this litter, and we believe she will be one of the most profitable sows ever brought by them. Another very excellent litter is out of Lou Dillon, a daughter of Orion and one of the reliable brood sows in the herd. Her litter is by Duroc Standard. Another sow, called Lottie, a daughter of Hatcher's Marti, has a good Duroc Standard litter, and there are some unusually good gilts in this bunch. May Orion, the highest-priced gilt sold in Iowa in 1905 is also owned in this herd, as well as a number of good daughters of Proud Advance, Orion, Long John, Peerless, Belle's King and Belle's Chief. They have about 110 spring pigs on the place, and it is the best bunch they have ever raised. They are going to be strictly in line this fall to cater to their large trade, and the boys always feel at home when buying of

this firm. Their representations are strictly in accord with what they send out, and they were never in better shape to fill orders than they will be this year. We sincerely hope the readers of this paper will remember them when it comes to buying a boar or a sow, as they will carry out any and every agreement and it is always a pleasure to do business with them.

HOMESTEADS AND CHEAP LANDS IN COLORADO.

Many of our readers have often made inquiries about homesteads in Colorado and how they could go about it to get one. This week we are running the advertisement of Messrs. Scharff & McColl, of Des Moines, Iowa, on page 15 in which they offer to locate any of our readers on excellent Colorado farming land for a very small fee and not only that, but place them on land where the adjoining property is selling at from \$5 to \$12 per acre. In conversation with Mr. Scharff, who has been all over this land many times, having lived in Colorado for years, he tells us that this is not the irrigated land, but that they have sufficient rainfall and that the crops are excellent every year, being able to raise alfalfa and all other good crops. Any reader of our paper who is contemplating a trip to Colorado should read this advertisement carefully and then write for full information, as it is a rare opportunity to get a free homestead in a good country. Kindly mention this paper when writing.

PURE SCOTCH AND SCOTCH-TOPPED CATTLE.

The grand herd of pure Scotch and Scotch-topped Short-horns owned by Mr. E. J. Hays, of Hampton, Neb., are worth many dollars to this gentleman. Mr. Hays has one of the best herds of Short-horn cattle owned in Nebraska. His herd is as uniform a lot as you will find and many of the cows in the herd are worthy candidates for honors at the best shows. We took special notice of a few pure Scotch cows in the herd. This type is hard to find in any herd. Mr. Hays holds a Short-horn sale on October 31st. On that day he will offer forty head of the good ones out of the herd of seventy-five. Of these, twelve will be good strong bulls and the balance will be matured cows and heifers. About fifteen cows will have calves at foot by sale day. The sale will also be made strong by the addition of some good pure Scotch cows and heifers. The Hays herd is worthy of any man's notice and the class of cattle bred by this gentleman will add to the good herds of this breed. We will say that the cows going in this sale are equal to some of the cattle that have been demanding the highest prices. Watch for the sale announcement and try and make arrangements to attend same.

FREE PLOW TRUCK OFFER.

A remarkable invention for farmers' use, called the People's Wonder Plow Truck, is being introduced in different communities all over the United States by a free offer that is within the reach of every reader of this paper. The People's Wonder Plow Truck is a device attaching to the beam of any kind of walking plow, and is so constructed that one wheel travels in the furrow, the other on the unplowed ground, and thus automatically guides itself. It is so regulated that it will plow any depth desired and keeps this uniform depth without the plowman guiding the plow or even holding his hands on the handles. The only work of plowing, therefore, is in driving the team and turning the plow at each end of the field. In turning, the plow is as easy to handle as a wheelbarrow, the truck acting as a pivot just as the wheel of a wheelbarrow does. By the addition of this device to any plow, a boy of ten years can do as pretty a piece of work as the most experienced farmer, and many readers have written that by this means they save a dollar a day on the cost of farm help in plowing. In writing for the free offer, address People's Supply Company, Dept. E, Kansas City, Mo. If you mention this paper you are sure to get most courteous treatment at the hands of the People's Supply Company.

A REPUTATION WELL EARNED.

Among the noted Duroc Jersey herds of the middle West none have contributed more to the upbuilding of the breed than has the one owned by Messrs. Fagan, Browning, Hess & McCabe, of Hersman, Ill. Mr. Al. Fagan has been breeding thoroughbred stock for some years and it has been a most profitable business with him. During the past three or four years he has turned his attention to the Duroc and by careful selections of breeding stock has been able to build up a very good herd and from which breeders can rest assured they will find nothing but good stock. When the above named firm was organized he cast his lot with it and the remarkable sale held on February 2d of this year is certainly evidence that his judgment was not misplaced. Mr. H. E. Browning needs no introduction to Duroc Jersey breeders. His father, Mr. J. M. Browning, was one of the pioneer Duroc breeders. If the memory of the writer serves him right the fourth Duroc Jersey advertisement which appeared in these columns was that of Mr. J. M. Browning. After Mr. Browning, Sr., closed out his noted herd, and it might well be said that many of the most prominent prize-winning boars and sows of the past few years, including Ohio Chief, trace directly to this herd—Mr. H. E. Browning started on his own hook. It was a long, hard pull for this young man,

but his determination to succeed and backed by an untiring energy have placed him in the front ranks of America's Duroc breeders. A clever showman, expert judge, successful feeder and an invaluable knowledge of the breed have fitted him for his life work in a manner seldom equaled by anyone. Mr. John Hess has been for some years associated with thoroughbred stock, and his successful breeding operations are the result of careful selection and proper mating of his foundation stock, coupled with proper additions to his herd from the best herds in the middle West. Mr. Jas. J. McCabe, the last, but not the least, member of this firm, has demonstrated his ability as a breeder of Duroc Jerseys. At the Illinois State Fair last year in strong competition he won first on boar under six months on Ambition, pronounced by competent judges to be the best grandson of Tip Top Notcher living today. This boar headed the litter which won first as produce of sow, second as young herd and second as young herd bred by exhibitor. Such a record is an enviable one. It is doubtful if four breeders can be found who are more adapted to this kind of work than are Messrs. Fagan, Browning, Hess & McCabe. The brood sow sale on February 2, 1906, resulted in an average of \$116.48 on the entire offering, the highest average ever made east of the Missouri river and up to that time the highest average of the breed. This firm also established a new record for brood sows, Helen Blazes III, selling for \$1,000, and the record for litter has never been equaled, Helen Blazes III, I, IV, and V selling for \$1,910. The dam of this litter has a nice litter of five out of eight by Tip Top Notcher, farrowed September 20, 1905, and a spring litter of nine farrowed March 18th by Tip Top Notcher. This makes a total of fourteen pigs that this firm have now of exactly the same breeding as the high-priced litter. This firm have four litters by Tip Top Notcher 20729; several by the great herd boar, Red Express 39519; several by Golden Echo 41183, and litters by the following great boars: A Top Notcher Chief No. 1, a direct descendant of Ohio Chief; Up-To-Date 36435; Proud Advance; Hanley; Double Track; Chic's Chief; Roland C.; Nasb's Model; Keep On; S. R. Advance; Col. Advance, the two latter by Proud Advance; and last but not least, a litter by Mayor Jr., winner of first at Illinois in 1905. The herd boars in use are Red Express 39515; A Top Notcher 28723; The Lad For Me 10733 (A); Golden Echo 11183; and Up-To-Date 36435, the latter being fourth prize winner at Illinois in 1905. The Lad For Me won first in the Missouri money at the St. Louis World's Fair and is a direct descendant of Lucy Wonder, champion sow at the World's Fair in Chicago. A Top Notcher is by Tip Top Notcher, champion at the World's Fair in St. Louis. Red Express is by High Notcher and be by Top Notcher 8803 (A). He is a show hog and a breeder of strong, large litters and is bred in the purple. Golden Echo is by Gold Cloud, champion at Illinois in 1904, and is also a grandson of Echo King 8671 (A), who sired Wilda, the champion sow at Ohio State Fair, 1905, selling in Mr. Nidlinger's sale for \$380. Up-To-Date is a direct descendant of Orion and some of the best hogs of the breed in the East. They have in their herd the blood of Tip Top Notcher, champion at World's Fair, St. Louis; Hero, champion at World's Fair, Chicago; and in Lucy Wonder XXI, they have one of the few living daughters of Lucy Wonder, the champion sow at Chicago. They have the blood of the reserve grand champion boar at St. Louis, Ohio Chief; they have the blood of Top Notcher Chief Jr., champion and reserve champion at St. Louis; the blood of Advance, Nebraska Belle, Fashion Boy, also have one of the very best sows ever sired by the great Buddy K. IV., the champion of Illinois, 1905, and a great sow of Gold Finch and Oom Paul breeding. The blood of Longfellow, Tom Wonder, Ora Wonder, Orion, Orion II, Sensation, Condo C., Goldie's Top Notcher, Improver II, Missouri Wonder, Best of Top Notchers, Kantbeate and others. Concerning the stock on hand and the future plans of this firm, Mr. H. E. Browning writes: "The Lad For Me 10733 (A) at head of herd, first in Missouri money world's fair, St. Louis; sire of the tops at two of the sales of G. W. Seckman; sire of the dams of the pigs Mr. Seckman won on at world's fair; sire of some of the very best sows in the Seckman herd; sire of Helen Blazes 4502, dam of Helen Blazes II 90640, the \$1,000 gilt and the four gilts selling for \$1,970 in our February 2d sale. We cannot say too much for The Lad for Me. As an individual he is not a large hog, as he would not weigh over 800 pounds in show shape. He is heavy-boned, up on toes, good ham, well-sprung rib, good back, fine head and tip ear, with a bright, prominent eye, good cherry color and extra good disposition. As a sire he has earned his spurs and The Lad For Me breeding is respected by all. We have about 200 head in herd and several sows yet to farrow. We bought eighteen head of choice sows on the sale circuits this winter and have added new animals of great individual merit and of prominent families. We are in shape to furnish our old customers with new blood and we are ready to deal with them in the same old satisfactory way to parties who have never dealt with us and our way of doing business we wish to say we deal as man and man should deal together. If you should favor us with your order, or better yet, visit our farms and make your own selections, you will find that our chief aim is for everybody to get their money's worth. If in need of a pig of our famous breeding write us. We will tell you what we have and if it's not what you want there is no harm done. We are in business to stay and will do business in such a manner that we can stay. Our reference is the best breeders with whom we have done business. The breeder's verdict as to the quality of our stock at our February sale was an average of \$116.48 on the entire offering. Our aim is to improve the quality of our stock so that breeders will continue to have a high estimate of our herd." Look up the announcement on page 23 of this issue and plan to visit this firm if in need of good stock, or write at once for descriptions and prices, kindly mentioning this paper.

EACH TUESDAY THIS YEAR

THE CHICAGO GREAT WESTERN RAILWAY will sell homeseekers tickets to points in Alberta, Manitoba, Minnesota, North Dakota, Saskatchewan, western Ontario and Wisconsin at rate of one fare plus two dol-

OHIO CHIEF 8727

THE GREATEST LIVING DUROC-JERSEY SIRE

DUROC JERSEY HOGS.

Dispersion of the Famous Gold Dust Herd of Durocs.

HAVING decided to close out my Gold Dust herd of prize winning Duroc Jerseys, I now offer to the public, at private treaty, my entire crop of spring boars. They are sired by Tip Top Notcher, grand champion at World's Fair, acknowledged by most competent judges to be the best Duroc boar in America; Ohio Chief 11, one of the best sons of Ohio Chief; Champion Paul, a son of the noted Oom Paul; and Percy Orion, an exceptionally good son of the World's Fair winner, Orion Chief. I am keeping my sows and spring gilts for closing out sale on October 24, although I have received tempting offers for them at private treaty. I am keeping nothing back and my entire herd will be disposed of at private and public sale. Write for prices and descriptions at once if you want a herd from Gold Dust herd. Address,

GEO. W. SECKMAN, RIPLEY, ILLINOIS.

CLOVER-WAVE DUROC JERSEYS.

Sires in service, Red Orion 28793, by Orion 5393; dam Rose Bird 50188 by Jumbo Red 7973, a half brother to Ohio Chief. Belle's King 11 44113, by Belle's King, a son of Echo King and Nebraska Belle. Dam of Belle's King 11 is Lou Dillon 109830 by Orion, dam Cherry Blossom 11 50574 by Dandelion 12165. Duroc Standard 44117 by Duroc Paragon 29161, by King Perfection 18235; dam Paulina Queen 11 86492, by Duroc Challenger 11163. We have 110 pigs mostly of March and April farrow, sired by these boars and others, and from us good lot of sows can be found in any herd. We are better prepared than ever before to furnish choice breeding stock. Visitors welcome at all times.

Model Herd Chester Whites

8 STRICTLY choice fall boars sired by All Right 11789, 75 spring pigs, March and April farrow. Sired by W. F. A. Model 12101, All Right 11789, Seductor 12387 and others of equal merit. If in need of something choice order early from the Model Herd. Guaranteed as represented. Am booking orders for spring pigs to be shipped when wanted. Ship C. O. D. and pay express. W. F. Hemmerling, Dike, Iowa

MAPLE GROVE CHESTER WHITES.

I HAVE 120 spring pigs sired by Prince O. K. A prize winning boar at Illinois, Iowa State Fairs and Inter-State Fair, Sioux City '05; Fisher Medium 11, best son of Fisher's Medium. 1st prize winner Illinois State Fair, 1905, and 14 good full borns by Illie A. Will pay express until September 1st. Send in your orders at once for extra good stock at reasonable prices. Can ship pairs or trios not akin. Ernest L. Mear, R. R. 1, Neponset, Ill.

Bluff Road Herd Chester Whites

I HAVE an extra good lot of strong, vigorous fall boars which I am pricing reasonably for next 30 days. 200 spring pigs from prize winning ancestry now ready to ship. Write for prices and descriptions.

D. H. LEWIS, GENESEO, ILL.

SOLD OUT, BUT STILL IN THE BUSINESS

OF breeding Chester White Swine. Our best matured sows are bred for first of March farrow to such boars as Choice Goods 14735, Perfect Medium 13891 and College Teddy's Son 15333. If you want something good you will get it by sending in your order early. I ship C. O. D. and pay express.

JAS. FISHER, EASTMAN, CRAWFORD COUNTY, WISCONSIN

I Am now offering boars that are rich in the blood of the champions Kerr Dick and Big Mary. It is the blood of this pair that made my December sale average \$49.35 and my April sale average \$64.95. Herd headers among these. Write me.

O. L. KERR, INDEPENDENCE, MO.

RED POLLED CATTLE.

Joseph Kestel, John Schrotberger.

Red Polled Cattle

EITHER sex for sale. Have show stock, Duroc Jersey swine. Equal to the best. Kestel & Schrotberger, New Leux, Ill., or Gardner, Ill.

RED POLLED CATTLE.

80 HEAD in herd. Irwin 8253, an International prize winner in 1903 and 1st and eweepstakes at Iowa and Neb. state fairs in 1904, is at head of herd. Choicely bred bulls, also some heifers and cows for sale at zero prices. Come and see or write. G. W. Coleman, Webster City, Iowa. Route No. 3. Phone 1208.

RED POLLED BULLS AT BARGAIN PRICES

4 CHOICE yearling bulls by Chicago Boy 11348, at \$100 each, and Chicago Boy at \$200. C., M. & St. P. and Rock Island Rys. Address,

G. W. Sharp, Marble Rock, Iowa.

SHORT-HORN CATTLE.

WOODLAND SHORT-HORNS

IMP. First in the Ring and Choice of the Ring bulls in service. Special inducements to buyers of females. Some choice young bulls for sale. Correspondence solicited. Address,

W. I. WOOD, Williamsport, Ohio.

Village Creek Short-horns

IMP. Roan Archer, one of the best bulls of the breed heads herd. A few extra good young bulls and heifers for sale at reasonable prices. Inspection invited. Ask for herd catalog with pedigrees printed in tabulated form.

W. H. SCHAFER, KEANSBURG, ILL.

WAYSIDE SHORT-HORNS.

G. H. BURGE, PROP., MT. VERNON, IOWA.

4 Red Bulls For Sale 4

ALL OVER 1 YEAR OLD. 1 SCOTCH BULL, 3 SCOTCH-TOPPED.

WILLIAM REED

PLEASANTVILLE, IOWA.

BREEDER of Short-horn cattle. 175 head in herd. Wish to sell 50 head quick. Farmer's prices. Come or write.

Scotch and Scotch-topped Short-horn Bulls

TWO sired by the International champion, Nonpareil Klug. Others by noted Scotch bulls. These must be seen to be appreciated. Write us at once if you want a herd header. Address,

C. W. DAVIS & SON, HANLAN, IOWA

SPRING CREEK HERD OF SHORT-HORNS AND POLAND CHINAS.

VERY choice spring gilts bred. A few spring boars. Would sell my Scotch herd bull Archer 209427 by Imp. Golden Archer, dam Imp. May Blossom, by Prince of Archers. Also some nice bull calves.

C. F. ROBE, JESUP, IOWA.

WALNUT GROVE Short-horns and Poland Chinas. Clear the Way 231482, winner of 1st at Iowa State Fair, 1st at Minnesota, 6th at International, Chicago, as junior yearling, 1905, heads herd. Herd boar, Per. Prince 93075 by Chief Per. 2d 42559, litter brother to Per. E. H. 95201, won 1st, Des Moines, 1905. Young stock; prices reasonable. J. T. Judge, Carroll, Iowa

CHOICE SHORT-HORN BULLS FOR SALE.

I WILL sell my herd bull, Nonpareil Courtier Jr., two years old May 13th, sired Nonpareil Courtier 2d; dam, Beauty 48th of Maine Valley. Also one red yearling bull sired by Scottish Baron. Address,

J. H. MOYER, NEWTON, IOWA.

ELM GROVE SHORT-HORNS

AND POLAND CHINAS. Lavender Viscount 2d heads our herd of Short-horns. A few choice Poland China fall males and gilts for sale. Write your wants.

ISAAC NOVINGER & SONS, Kirksville, Mo

Pleasant Dale Stock Farm. GEO. F. Dorsch, Prop., Cook, Neb. Breeder of Short-horn cattle and Duroc Jersey swine. Hog sale September 23, 1906, at farm.

When writing please mention this paper.

MY SPECIALTIES

CHESTER WHITES. Pairs and trios not akin. Ship nothing but the best. Satisfied customers. Write for descriptions and prices.

N. A. KANCK, NIOTA, ILLINOIS

SANGAMON HERD O. I. C. SWINE

200 HEAD of spring pigs representing prolific prize-winning families ready for shipment. Will prepay express. Correspondence solicited. Satisfaction guaranteed.

J. F. HALL, Mechanicsburg, Ill.

SOME CHESTER WHITE BARGAINS.

10 FALL YEARLINGS, 100 FEBRUARY, March and April farrows ready to ship. Our herd hog weighs 900 pounds now. These pigs are of the best breeding strains that money would buy. We ship on approval. Prices right.

E. L. NAGLE & SON, Deep River, Iowa.

OUR spring crop of Chester Whites representing 5 families, good as there is in the U.S., although few in numbers, are extra good in quality. Up to Aug. 1, we will ship C.O.D. and prepay express. 12 tall gilts, bred, for sale.

DIAPLELAWN FARM, W. M. Mercer, Prop. Aurora, Ill.

A. M. Ellsworth, Grand Ridge, Ill., breeder Chester White Swine, 200 spring pigs representing best families of breed. Can furnish pairs or trios not related. My pigs are of the large, smooth heavy bodied type, with best of feet and legs, and will suit most discriminating buyers. Write or visit me if in need of good Chester Whites.

ROCKFORD herd of Chester Whites and O. I. C. Swine. I have a few yearling and tried brood sows that will farrow in June and September. These are choice sows. I am also billing orders for March pigs. Some exceptionally fine herd headers among the lot. Will price them worth the money. Write for prices, etc.

JNO. CRAMER, BEATRICE, NEB.

IMPROVED CHESTER WHITES

A FEW choice May gilts left. Bred to a first class boar. Prices reasonable. Address,

J. M. JANSSEN, SIBLEY, IOWA

200 LARGE O. I. C. Pigs. Two hundred of early and late spring, August and September farrow, from matured sires and dams not akin, at former's prices. Herd Headers, Duke 4955, Frosty 13570, Snowdrift 12183 and others. Satisfaction guaranteed. P. E. Hankins, Sciota, Illinois.

200 CHOICE O. I. C. SPRING PIGS FOR SALE in singles, pairs or trios not akin. Bred for size and finish. Prices reasonable. Write your wants. Fisher Live Stock Co., Hastings, Neb.

7 O. I. C. male pigs of Jan. farrow, very lengthy. Also pigs of March and April farrow.

Chas. W. Nehergall, Davenport, Iowa.

OHIO Improved Chester Whites. October, January and March boars and gilts. Sows bred. Stock mated. Farmers' prices. F. Ruebush, Good Hope, Ill.

CHOICE CHESTER WHITE MALE PIGS of April farrow from registered stock, R. I. Red poultry. M. A. Guinan, Webster City, Iowa.

POLLED DURHAM CATTLE.

DOUBLE STANDARD

Polled Durham Short-Horns

HERD headed by Secret Knight, he by the \$1,000 Idle Knight N1374-159582. A few young bulls and heifers of this famous Polled breed for sale at reasonable prices. Farm five miles from town. We won 1st prize at the Iowa, Nebraska and Kansas State Fairs this fall, including twenty-one firsts and ten sweepstakes.

L. G. SHAVER, KALONA, IOWA.

D. S. Polled Durham Bulls.

FOR SALE—4 dark-red blocky yearlings, at \$75 to \$100. One two-year-old herd bull, \$150. Cows and heifers bred or calves by side. Short-horn bulls 17 months old, \$75 to \$85. 2 miles northeast of city.

P. S. & S. Barr, Box H., Davenport, Iowa.

SPECIAL ANNUAL

Atlantic City, N. J., and many other seashore resorts

EXCURSION,

THURSDAY, AUGUST 2, 1906,

VIA

BIG FOUR ROUTE

New York Central Lines.

RATE \$19.50 for the round trip from Peoria. Return limit fifteen days including date of sale. Stop-overs will be allowed on the return trip at Philadelphia, Baltimore and Washington within limit of ticket. Special fast train of standard sleepers and coaches will leave 12:00 noon running through without change. For further particulars call on nearest Big Four agent or address

VOL. LI. NO. 28.

DES MOINES, IOWA, JULY 12, 1906.

WHOLE NO. 2556.

BUYING OPEN OR BRED SOWS.

The following communication has been received from one of our subscribers, Mr. John Schowalter, of Johnson county, Neb.:

Swine breeders are now meditating the question of adding new blood to their herds, and the problem presents itself as to which is the better plan, that of buying bred sows or open gilts. In my experience better results have uniformly followed the practice of purchasing open gilts early in the fall. This gives one an opportunity to develop them according to his own methods. I have attended sales where I would have paid more money for certain sows had they not been bred, because in my opinion in these instances they were not properly mated. Then, again, other sows that I have taken a fancy to have often been bred to farrow at a time that did not suit my convenience. Because of these disadvantages I favor the policy of purchasing most of the females early in the fall.

What is said about the females is also applicable to the male. He is half the herd and the practice of selecting him early cannot be too highly commended. The early buyer has always the better choice, and if a man knows his business he would rather develop a male in his own way than to have some one else do it for him. This can only be done when he is purchased early.

The arguments advanced by this subscriber are worthy of the consideration of every man who expects to add either males or females to his herd this season. While, as a rule, one cannot always tell what the outcome of a pig will be until it is five or six months old, yet those that are shapely and have made good growth by the time they are four or five months old may generally be depended upon to hold the pace. If a breeder has hogs for sale he will without doubt, barring those that he intends to keep for his own use, send out the good ones first. This is based on the fact that it is his hope that a little more feed will bring the others up to a desirable standard. We have seen some very hard looking pigs at the age of three months make a good showing at ten months of age. At the same time we have no hesitation, if allowed to choose, in taking one that satisfied the eye at an early age.

Men sometimes hesitate to buy their male early because of the bother in keeping him. It is true that his care involves some labor; at the same time we are not sure but what one is well paid for his trouble. If a young boar is taken at an early age and put in a small yard where he has access to green feed, plenty of shade and if a barrow or two are allowed to run with him he will reach a better development by breeding time than if he is allowed to run with a big bunch of males. He will not only grow better, but he is apt to be more satisfactory as a breeding animal if taken away from other males at an early age.

ABOUT BOYS LEAVING THE FARM.

The July issue of the Century Magazine contains some data on the above subject, prepared by Prof. L. H. Bailey, director of the New York Experiment Station. A series of questions was submitted by Professor Bailey to several hundred students at Cornell University, his aim being to interrogate only those who were born on the farm. From the 155 replies received the following summary was deduced as to why these young men left the farm:

THE QUESTION OF FINANCIAL REWARD.

Farming does not pay; no money in the business.....	62
Difficult to acquire a farm without a start.....	10
Farming requires too much capital.....	5
Discouraged by the fact that farms are mortgaged.....	5
Farmer cannot control prices.....	2
The farmer buys high and sells low.....	1
High taxes near the city.....	1

Expect to farm some day, after making money in some other business..... 15

THE QUESTION OF PHYSICAL LABOR.

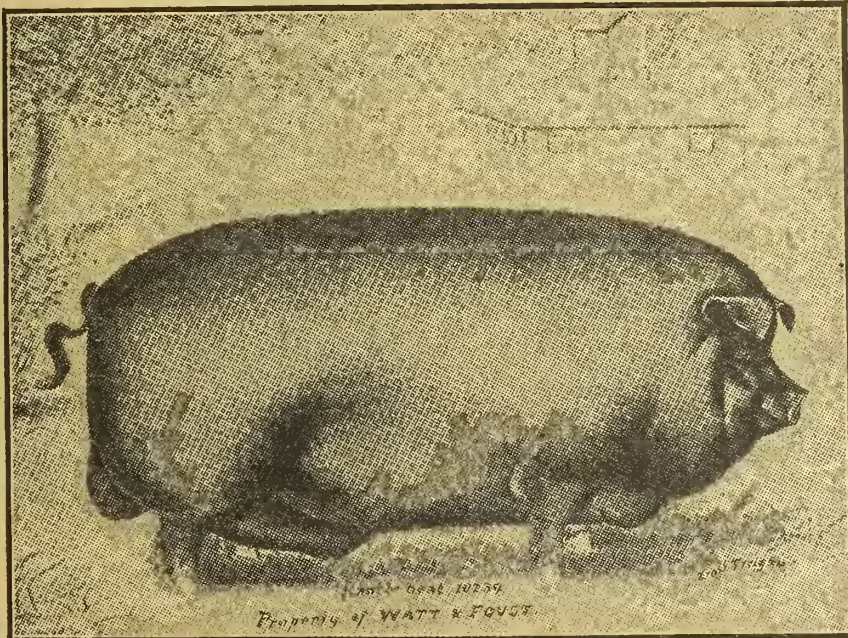

Too much hard work.....	26
Hours too long.....	17
Work too monotonous.....	11
Farming is drudgery.....	8
Work is unattractive and uncongenial.....	6
The work is not intellectual.....	6
No machinery can perform the hard work of the farm.....	2
The work is too hard in old age.....	1
The farmer is too tired to enjoy reading.....	1

SOCIAL AND INTELLECTUAL IDEALS.

No social advantages or activities.....	26
More opportunity for advancement elsewhere.....	14

that of making farm pay, we would say that it requires ability above the ordinary on high-priced land to realize a satisfactory profit on one's investment and on the labor put into the business. Regarding the social advantages of farm life it must be admitted that in the past there has been some handicap, but in the future this will be largely removed. The improvement of roads, the introduction of electric railways, and the telephone are going to bring about a material change in the social life of farmers.

As to the matter of hard work, it can

The World's Fair prize-winning boar, Kan't Be Beat 28067, formerly owned by Messrs. Watt & Foust, of Cedarville and Xenia, Ohio, recently purchased for \$2,500 to head the well-known herd of Duroc Jerseys owned by Messrs. J. M. Morrison & Sons, of College View, Neb.

The farmer cannot be known in the world.....	5
Life is monotonous.....	4
The life is confining; no freedom.....	4
The association is with uncultivated people.....	3
The occupation is too narrow.....	3
The farm is isolated.....	3
Women are overworked on the farm.....	3
Farming is physical labor only.....	2
People have a low regard for the farmer.....	2
No higher and nobler achievement possible.....	2
No high ideals in farming.....	1
Education gave higher ideals and needs.....	1
College training unfit for farm work.....	1
Farmer cannot serve humanity.....	1
Farming has little excitement.....	1
Has come to know the city and likes it.....	1
Farmer has no political advantages.....	1

MISCELLANEOUS HANDICAPS.

Natural bent elsewhere.....	24
Parental influence against farming.....	6
Teacher influenced against it.....	1
Father was unsuccessful.....	2
The home was unpleasant.....	2
Health not sufficient for the work.....	3
Difficult to secure help.....	3

After submitting the table Professor Bailey refuses to comment on the import of the items contained therein. He says that the replies bring up many questions of public concern, for they have to do in a broad way with the position that the farmer occupies in the economic and social status.

It will be noticed that more of these young men have left the farm because farming does not pay than for any other reason. Next comes the item of hard work which is put forth as the reason by twenty-six of the number who responded. Because of social advantages or disadvantages of the farm twenty-six of the number have left it.

In regard to the first reason, namely,

only be said that labor on the farm, if intelligently pursued, is not more severe than labor in the city. Indeed, it has always appeared to us to be much less irksome owing to the variety, while the slavish element has been greatly lessened by the introduction of machinery.

It is not surprising that some sacrifices are called for from those who have the ambition to lead the independent life which the farmer lives. These sacrifices will not be so great in the future as in the past, though there are new and difficult problems to deal with. Nevertheless the prospect of owning an acreage of productive soil, the proper tilling of which will render you independent, will likely induce the proper percentage of our young men to stay on the land.

WEEDS AS ROAD-MAKING MATERIAL.

There is no more familiar sight these days than to see men in all parts of the corn belt working on the highways with graders building up the center of a road with a mixture of weeds, sods and soil. In a recent drive of nine miles made by a representative of this paper the roads on more than half the distance had been operated on some weeks before and the center piled high with the mixture named above; that is, weeds, sods and soil.

This subject comes up periodically, and we have in the past on a few occasions offended some of our good readers who happened to have something to

do with caring for the highways. We have no intention of holding up to ridicule the work of any skillful man, but we rather enjoy letting daylight into the bungler's methods.

The plan of going over the roads in the county with a heavy grader annually is stupid beyond any power of description. When this is done the work of one year simply means the undoing of the previous year's labor, and as a result such roads are usually in a constant state of unfitness for traffic. Our knowledge of good roads has come through practical experience and, incidentally, through the loss of much perspiration. Our conclusion as the result of this experience is that road-makers should aim to build a perfect piece of earth road each year. We realize that it is often necessary to employ makeshift methods in order to really make all roads in the county passable, and because of this it is not expected that the labor of the year will be put on a few miles of road. On the other hand, the general policy should be adopted of putting up substantial grades so that these may be kept for years to come by the use of such an implement as the King drag.

It is impossible to imagine a poorer kind of road material than weeds and sods, and yet, as stated above, you will often see the center of highways piled high with this mixture. When it becomes necessary to pile dirt in the center of the road those doing the work should take the time to mow, rake and burn all rubbish before starting the graders. When this is done it is then possible to make some kind of a decent job of leveling the surface when the work is completed, otherwise the traffic center simply becomes an ideal mud hole. Weeds soon decay, and as the result one has almost ideal conditions for the absorption of water. You have, in other words, humus-making material on the center of your road and such material, as everyone knows, retains moisture with a remarkable degree of persistency.

We believe that at this stage of the road question most highways may be looked after cheaply and effectively with the King drag until the opportunity presents itself to make a good grade. When the grade is made the drag should still be used, but under no circumstances should a heavy grader be used to disfigure a good grade after it is once put into shape. If the grader is used let the work be done at such a time when the material hauled to the center of the highway will not be composed of vegetable matter.

THE EFFECT OF THE NEW ALCOHOL LAW.

Some time ago we submitted a few inquiries to Mr. J. H. Allen, secretary of the committee on manufactures, which committee was formed to assist in securing cheaper alcohol for industrial purposes. In brief, Mr. Allen's reply is as follows:

In reply to your question as to how many gallons of alcohol a bushel of good corn would make, I would state that I am advised that the average yield in good dry corn is two and three-fourths gallons. This is alcohol of 180 degree proof, that is, 90 per cent alcohol and 10 per cent water, which has been found to be the strength which is best adapted for lighting, and motor fuel purposes.

In reply to your question as to the amount of alcohol produced from a bushel of potatoes, I would state that in the statement submitted by Secretary of Agriculture Wilson the figures are given that 20 per cent of the weight of the potatoes is obtainable as alcohol. In other words, at least two gallons of

alcohol should be produced from a bushel of potatoes.

As to the percentage of the total amount of denatured alcohol which would likely be produced the next few years from potatoes and corn, I would state that in my opinion much the larger portion of this alcohol would be made from corn, as at present relative prices it is cheaper for this purpose than potatoes.

I have no means of estimating the total number of gallons that will probably be made per year for the next five years after the law goes into effect, but judging by the experience of Germany would think that this country would use annually at least 50,000,000 gallons of alcohol for industrial purposes in the near future, and as the alcohol-using industries are developed should soon use much more than double that amount.

As to the probable effect of this law on the future price of corn, I would state that in my opinion the greatest benefit to the farmers from this legislation lies in the fact that for all time to come they are assured of a permanent market for all surplus corn at a profitable price; that is to say, that there would seem to be no danger of the price of corn at any future time falling much below forty cents per bushel, as at that price it will be profitable to convert it into alcohol, which keeps for an indefinite period, and can therefore be stored for any length of time.

While the farmers will be benefited by increased markets for their surplus corn, potatoes, beet sugar waste, and other products which may be utilized for making alcohol, they will also be greatly benefited by being able to use the untaxed material for lighting, heating, cooking and motor fuel purposes.

There is no question but that alcohol can be satisfactorily used for all these purposes, and we believe that American inventive genius can produce this material at a price which will enable it to compete with gasoline, kerosene, etc. Indirectly, the farmers will, of course, profit through the creation of new manufacturing industries giving additional employment to American workers, who, of course, will be enabled to buy more farm products of various kinds.

We have said repeatedly when the free alcohol bill was up for discussion in congress that this was one of the most important bills that has been before congress in recent years. This belief was based on the fact that there is a growing demand among farmers for a product like alcohol or gasoline to be used for power, heat and light. In the second place, we have frequently pointed out what Mr. Allen here calls attention to, namely, that one of the chief benefits that will be derived from the enactment of this law is the establishment and the maintenance of a new market for alcohol-producing materials. In the corn belt we are primarily interested in corn, and the consumption in the beginning of twenty or thirty million bushels of corn will have a noticeable effect on prices. It will bring more prosperity to the farmers of the central West and every student of affairs knows that real prosperity the country over begins at the farmer's door.

THE THEORY AND PRACTICE OF CROP IMPROVEMENT.

BY C. P. BULL, MINNESOTA EXPERIMENT STATION.

The average state yields of our field crops as a whole are abnormally and shamefully low, when we know that under good systems of farming it is possible to get sixty to 100 bushels of corn per acre; twenty to thirty of wheat; forty to fifty of barley; sixty to eighty of oats; twenty or more of flax, etc. To know this and examine statistics, it is ridiculous to find the average yield of corn to be below thirty-five bushels per acre; wheat below fifteen bushels; barley below thirty; oats below forty, etc. Certainly there are some mighty poor farmers in the land and a whole lot more that do not farm in the most profitable manner. If this is the case, we may ask ourselves—in what manner can we, practically and inexpensively improve the crops?

Crop yields may be improved in three ways, viz., by better cultivation and crop rotation, by applying manures and fertilizers, and by the use of better seed to keep up a high grade of inherited potency. While the breeders at agricultural experiment stations are doing much to improve the standard of our field crops, the field is not theirs alone. It is entirely within the power of every farmer to improve his crops by one or all of these methods.

By better cultivation is meant the better preparation of the land before seeding. The great majority of our farmers spend altogether too little time in preparing a fine, firm seed bed. In the corn belt and wheat sections this is especially true. Oats in the corn belt is more than half the time scattered broadcast from the tail end of a lumber wagon. The field is then disked or harrowed once. Corn stalks are standing everywhere (possibly to hold the oats up). The yields are not as much as the

farmer expected. The wonderful corn belt land is expected by those who have become rich from the fat of the land to produce a big crop under any circumstances. But the fat is fast disappearing. Higher prices of farm lands make it necessary to get larger net returns. The first few weeks of a crop of grain is an important period in its development. If the land is not plowed, disked and harrowed until it is fine and firm, no one need expect the best returns from his labor and seed. Broadcasting oats in standing cornstalks is slovenly. In connection with the better cultivation, comes the rotation of crops, a much discussed subject of the day. The better physical condition of the soil, ridding the land of weeds, better yields, etc., are items that should not be overlooked in arranging the different classes of crops in a systematic rotation.

The application of farmyard manures to our rich loam soils has been shamefully neglected. The lands are becoming depleted of humus and fertility. Some, especially in the East, have resorted to commercial fertilizers in maintaining yields, but a graver mistake could not have been made. Barnyard manure supplies the humus so necessary in the soil to keep it in good physical condition. Commercial fertilizers supply no humus, but on the contrary, deplete the soil's supply and are available only the one year in which they are supplied. Western farmers must not make the mistake the eastern farmers have made. Fertilizers must not be used to take the place of the barnyard manures. If manure is used in connection with clovers and grasses, in rotation, there need be, except in a few cases, no commercial fertilizers used in the West.

Better seed is the universal need of the farming of today. A very great improvement can be made in the farmer's yields by carefully grading the seed in a fanning mill, saving only the largest, heaviest and plumpest and most mature kernels. This, however, is not sufficient for the progressive farmer. He wants to use a more intensive method and get a correspondingly better grade and higher yield of grain. Yet he must not exceed the range of practicability. He must not neglect his regular farm work for the minor details of selective breeding that are so fascinating. In other words, he wants to go just so far in the work as to warrant a large measure of success. How, then, can this be done?

The solution is not a new one. The farmer who picks out enough ears of corn from his harvest, to get seed for the next year's crop has solved the problem. He has (in his way) selected the best individuals, just as the stock raiser has done, to keep up the variety or breed. This is well known to all corn raisers. But how can this be done with the small grain, oats, wheat, barley, etc? Again we have a case to cite to. Certain well-known and valuable varieties of wheat, (Hayne's Bluestem and Wellman's Fife) have been originated in that way. Oats may be greatly improved and better adapted to certain localities by selecting the best seed with the fanning mill. Plant these in a plot by themselves; when ripe, pick from this plot enough of the best looking, largest, best filled and most erect heads (panicles) to plant a small patch the next year. Use the best of the rest of the plot to plant the large fields. Plant the seeds from the selected heads the next year and select the best heads as before. Keep this up for a few years, each year planting a seed plot. Satisfactory and profitable results are sure to come. Several bushels increase per acre will come from such selection in two or three years. A man in Canada cleared \$40.00 per acre from his wheat simply because he had selected his seed stock in this way. Why can't a profit be realized by selecting oats and barley?

It is the individuality of the seeds and plants that must be observed, if satisfactory results are in the future to be realized from our staple crops. The man who gets in on the ground floor is first to succeed.

THE AMERICAN ROYAL SHOW.

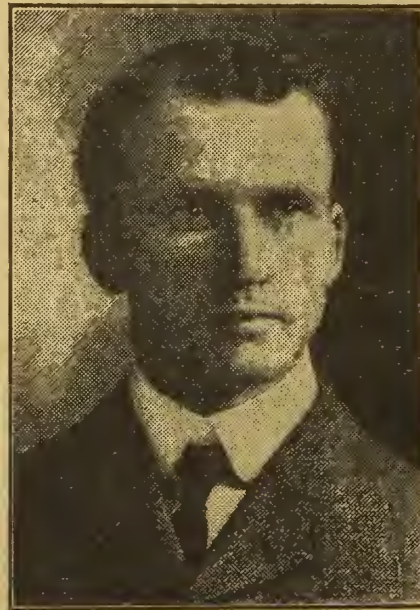

The preliminary classification for the eighth annual American Royal Live Stock Show, to be held at Kansas City, October 6-13, indicates that this year's show has been planned upon broader and more comprehensive lines than any of its predecessors. In addition to the features which have characterized this event in past years, there will be a large display of breeding swine, a contest for dual-

purpose Short-horns, and a students' judging contest. Some idea of the scope of this show may be obtained from the following summary of classes for which prizes are offered: Cattle Department—Breeding Herefords, Short-horns, Aberdeen Angus and Galloway; dual-purpose Short-horns; pure-bred and grade fat steers and heifers; car lots of fat and feeding cattle. Horse Department—Breeding Percherons, Clydes, Shires, Belgians, German Coachers and French Coachers; draft horses in harness; mules. Swine Department—Breeding Berkshires, Duroc Jerseys, Ohio Improved Chester Whites and Poland Chinas. Students' judging contest. The prizes in these various departments aggregate in number upwards of 1,000 and in value upwards of \$28,000.

AN EXPERT IN ANIMAL HUSBANDRY

Another addition has recently been made to the staff of the Iowa Agricultural College in the appointment of Prof. J. A. McClain as a member of the faculty in the animal husbandry department. It is the purpose of the trustees to enlarge the already extensive animal industry course by assigning to Professor McClain the work in "animal nutrition."

Professor McClain is a graduate of this institution and since his graduation has been connected with the Colorado Agricultural College. He is one of the farm boys who has succeeded in practical affairs. He has had unusual opportunities for investigation along sci-

J. A. McCLAIN.

tific lines and these have been fully utilized.

We commend the action of the trustees in strengthening this department of the agricultural college. The live stock interests of the state are constantly growing in importance, inasmuch as the supply of soil fertility can only be kept up by farmers adopting freely the plan of feeding their crops and returning the manure to the land. While much is being done to improve grain, at the same time no great advancement can ever be made unless due attention is given to the maintenance of fertility. A rich soil is half the battle and soils can only be kept rich where live stock is regarded as the basic industry of the state.

There never was a time when our farmers were more eager to acquire information about feeding animals, and it would seem to us that a very important work lies before this new professor. He will find a large field in which to exercise his superior talents.

DISADVANTAGES OF SHOOK THRASHING.

We do not assume that farmers of the corn belt need advice about when they should thrash their grain. Sometimes it is impossible to plan very far ahead about many forms of work, and this applies to the question of thrashing.

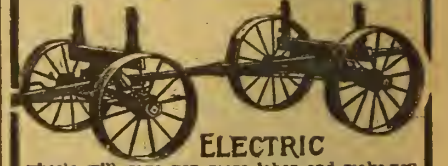

However, there are a number of disadvantages that might be considered connected with the plan of thrashing out of the shock as compared with stacking. In the first place it is necessary to co-operate in a more extensive way with neighbors in shock thrashing. If twelve farmers go in together on the deal it takes not only the men but also the teams away from home until all are thrashed out. In the other case, that is when grain is thrashed out of the stack,

What Do You Think of This?

During the past year 15 farmers of Mesa County, Colo., have asked for our catalog about

Electric Steel Wheels and the Electric Handy Wagon

Up to date 14 of them have purchased either a wagon or a set of wheels.
Does that mean anything?
It proves that we have a reasonable proposition. We say that the Electric wide-tired, steel

ELECTRIC

wheels will save you more labor and make you more money in a year than any other thing you could put upon the farm. Several hundred thousand farmers who have tried them say the same thing. By every test they prove to be the best. The spokes are united with hub and axle, can't work loose. Your money back if they do. We don't ask you to take our word for it. Send for our book; read what others say and use your own judgment. Our catalogue is sent free for the asking.

H. L. BENNETT & CO., WESTERVILLE, OHIO.

the teams are left on the farm, as only men are needed around the modern thrashing outfit. This gives an opportunity to do many things that might be neglected when the other plan is carried out.

Straw is in much better shape to use for bedding or for feed when it is stacked first in the sheaf, as compared with thrashing directly from the shock. Shock thrashing means that the work is done early, thus giving the straw stack ample time for saturation.

Grain is always benefited by being put through a sweat in the stack. In the case of wheat it may make a difference of a few cents a bushel. Where wheat is thrashed directly from the shock it usually takes on a more or less bleached appearance, and this impairs its quality for milling purposes.

The danger of getting caught and having a goodly part of the crop entirely spoiled by the rains is avoided if the time is taken during the dry, hot months to put grain into the stack. Of course were one reasonably sure of getting his crop thrashed without unnecessary delay, caused by waiting for the machine or by rain, the advantage of getting the work done up quickly might in some instances offset all the disadvantages. Nevertheless, on general principles, stacking is preferable to thrashing from the shock.

SPECIAL EXCURSION RATES TO COLORADO, UTAH AND THE BLACK HILLS.
Via the North-Western Line. Beginning June 1st excursion tickets will be sold daily to Denver, Colorado Springs, Pueblo, Salt Lake City, Hot Springs, Deadwood, Lead and Custer, S. D., etc., good to return until October 31st. Specially low rate round trip tickets to these and other points, with favorable return limits will be sold the first and third Tuesday of each month until September 15th, inclusive. A splendid opportunity is offered for an enjoyable vacation trip. Several fine trains via the North-Western Line daily. Apply to agents Chicago & North-Western Railway.

VERY LOW EXCURSION RATES TO DENVER, COLORADO SPRINGS AND PUEBLO

Via the North-Western Line will be in effect from all stations July 10th to 15th, inclusive, with favorable return limits on account of Grand Lodge B. P. O. E. Two fast trains through to Colorado daily, only one night. For full information apply to agents Chicago & North-Western Ry.

Farm Furrows

Turned by a Practical Farmer.

A good season to raise hay often means a poor season to make it.

Making hay simply means making things hum while the sun shines.

If one wants to be happy and contented in the next world he will have to get in practice in this.

If men could only be made honest as easily as they can be punished for dishonesty, great good would come from it.

The corn grower seldom whines because the weather is too hot. A hot time these days means more corn in the crib.

Abc Martin says there is a girl in his neighborhood who is so thin that when she smiles her face disappears entirely.

It is most exasperating to attempt to fix a pump when the stock is standing around waiting and making things unpleasant.

When a merchant tells me he is selling his merchandise below cost I am afraid the deal is loaded and I watch him closer than ever.

Carriage horses just now are bringing good money. Those who want them are wealthy and will pay good values for something desirable.

Whenever the swinging motion of a hoe is made as popular as the swinging motion of a baseball bat, then boys can't be kept from the garden.

Trying to mow grass with a dull sickle is like trying to eat porridge with a fork. The works of gophers do not help any in keeping a sickle sharp.

All fence rows should be set to grass so as to keep down a dense growth of weeds. If weeds are allowed to grow it means that they will have to be mowed.

A berry grower caused all his berry pickers to wear muzzles so they could eat no berries and they struck. The strike was justifiable—the berry grower was a hog.

A ton of alfalfa hay cut a little on the green side of life is worth a ton of bran as stock feed. Clover hay cut at the proper time will be almost as good as the alfalfa.

A friend asks how to get rid of golden-rod. That is easy. I once got rid of this weed by mowing it and putting in a flock of sheep. One or the other, or both, killed all of it.

I recently saw a thrasher that had a straw cutter attached to the tail end of the separator which cut the straw up in small pieces ready for feeding, as the thrashing progressed.

It is about time for some newspaper writer to claim that quack grass is good for pasture. I have always considered it a dangerous weed and have no compromise to make with it at all.

Many farmers are thwarting the rat nuisance by placing concrete foundations under their cribs and granaries. The expense is a little more in the beginning, but there is a saving in the long run.

A bunch of wild horses in Oklahoma—said to be the last herd of wild horses in existence—gave up the chase the next day after the territory was admitted as a state. Could not stand civilization.

The man who never reads is incapable of doing much thinking, and he pits his muscle against the other man's business qualification brought about by thinking, and thus works on the short end of the doubletree.

Some writer in an eastern paper has taken the ground that a grindstone is short-lived and lasts from two to three years on a farm. I know that a grindstone is sometimes neglected, but I do not believe what he says at all. The grindstone I turned when a boy is still in commission and doing good service, and I am not a young man at all, for I have several grandchildren. There are many scores of grindstones in use that

ought to have been worn out many years ago, and more modern ones substituted.

The cut worm, like the "x" of algebra, is always the unknown quantity, and it is as hard to find him sometimes as it is to find what "x" in algebra equals. Let the scientists tell us how to get rid of this pest.

If your family has not had all the strawberries and garden truck their hides will hold, what has been the reason? These things are so easily obtained that one ought to be ashamed if they are not supplied.

Cows are often cheated out of a great deal of bovine enjoyment by being denied night pasturage. Most people feel that it is too much trouble to go after the cows in the morning, hence they are kept up in a dry lot.

The corn trade no more than recovered from drouth reports in June until it became attacked with a well developed case of denatured alcohol manufacture. Verily old corn looks good to the farmer who is in possession of it.

Sam says the easiest way to dispose of potato bugs is to procure two small cubes of hard wood, catch the bugs one at a time, place them on one cube and then press the other cube firmly on top of it. This is sure death to potato bugs.

The kicker can always find something to kick about. The man who was kicking a short time ago because we were not having warm weather is now kicking because the weather is so hot. It is strange that nature cannot temper the weather to suit the shorn goat.

Millers now complain that they are selling flour below cost. It is wonderful what wealth some men have piled up by selling things below cost. If the millers can make as much money at the game as the packers have by cutting up hogs at a loss, they will have no kick coming.

The production of cement has multiplied one hundred fold in the past sixteen years. It is now used in almost all kinds of building and any farmer who wishes to build durably should understand its merit. Any farmer can easily learn how to mix it and fashion it to suit his wants.

An eastern orchardist reports a very good sale of Ben Davis apples. He has ninety trees that have been set out nine years and last year he sold from them apples to the amount of \$421.75; his net receipts being \$388.33. These despised Ben Davis apples sold at from \$5 to \$5.75 per barrel.

Some of the very accurate writers are given a pain because western farmers insist on calling it dehorning. The correct writer says it is "dishorning." Whatever it is, it means removing the horns, and most farmers understand what that is. I still believe that the horns of cattle ought to be removed in infancy.

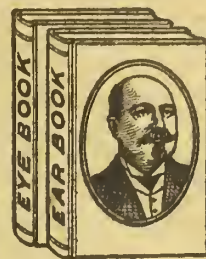

The hired girl problem is getting worse instead of better. Many girls seek employment in cities because the wages are larger and there are more privileges. They then marry city men, leaving country boys to find companions in city girls, who in turn will not live on the farm, and both boys and girls are lost to the farm.

Tramps do not take kindly to bread and butter. They desire something better, and a good way to get rid of them is to offer them bread and butter, and if they will not take that let them go without. A hungry man will be glad to get bread and butter. They will not often call at a place where they get this kind of a hand-out.

One thing about rural mail delivery has been overlooked by some. It cuts out a great deal of incivility of discourteous postmasters who get large salaries and perform few duties. Some of them act bored when asked for mail. Do not disturb the postmaster when in discharge of his duties, which consist chiefly of drawing his salary.

Recently Thomas A. Edison said he had at last discovered extensive deposits of cobalt, a substance which will permit the use of storage batteries without much weight. He now claims that the horse will soon be replaced. Yes, I remember that just eleven years ago this same man prophesied that horses would soon be curiosities in the streets. It is astonishing how many times the horse has been

YOU CAN RESTORE YOUR HEARING AND EYE SIGHT AT HOME IN FIVE HOURS.

THESE BOOKS ARE FREE!

WRITE today and read of the remarkable cures being made by this new system. 100,000 patients have used it.

I WANT every person afflicted with Cross Eyes, Catarrhs, Granulated Lids, Wild Hairs, Glaucoma, Ulcers, Inflamed or Sore Eyes, Scums, Itches, Weak Eyes, Falling Eyesight or Blindness from any cause, to write me for my big free 80-page book on Eye Diseases.

And those afflicted with Deafness or Falling Hearing, Ring, Head Noises, Ulcerated or Throat Disease, to write for my free 64-page book on Deafness and Ear Diseases.

These books explain how people afflicted with the above named diseases may cure themselves in five hours by following my advice.

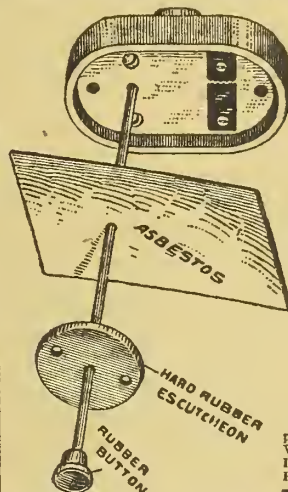

Are You Coming to the State Fair in DES MOINES, AUGUST 24TH TO 31ST? If You Are, Write for One of My Books.

I will send you a consultation card which will entitle you to free examination at my office during State Fair week. I usually charge \$5 for examination at office but that week it will be free.

I make no charge for consultation by mail. Write me for either book you wish and specify which book you want. Also write me a description of your case. I will send my opinion and book absolutely free.

CROSS EYES Straightened Quick. I will straighten any case of Cross Eyes during State Fair week for \$25. No matter how badly Crossed or how long they have been. I do it in five minutes without pain or chloroform. Write me. Address,

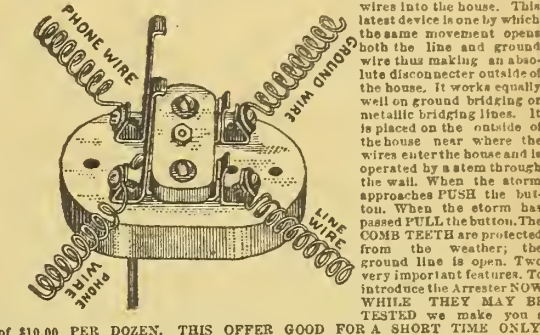

DR. W. O. COFFEE,
340 Century Bldg., Des Moines, Iowa.

J. W. Pedigo Arrester

Much study and experimenting has perfected the J. W. PEDIGO ARRESTER.

For years the telephone was not seen in many homes because of the fear of lightning following the line wires into the house. This latest device is one by which the same movement opens both the line and ground wire thus making an absolute disconnect outside of the house. It works equally well on ground bridging or metallic bridging lines. It is placed on the outside of the house near where the wires enter the house and is operated by a stem through the wall. When the storm approaches PUSH the button. When the storm has passed PULL the button. The COMB TEETH are protected from the weather; the ground line is open. Two very important features. To introduce the Arresters NOW WHILE THEY MAY BE TESTED we make you a

price of \$10.00 PER DOZEN. THIS OFFER GOOD FOR A SHORT TIME ONLY. Write to the INVENTOR J. W. PEDIGO, LUCAS, IOWA. He Will Send You A Guarantee.

Do You Want a Home in Kansas

"abolished" in recent years, and they are dearer now than ever.

In hauling up hay with a horse, if the horse is turned in a circle all the time, it will untwist or kink the hay rope. The driver of the horse should turn gee at one end and haw at the other turn, making a figure eight movement, and there will be no kinks put in the rope.

Some very horrible things have developed in the packing house investigations. It is awful to think about, but no one has said anything about the cow that feasts on the litter from the horse stable, or the chicken or pig that feeds after fattening steers. Oh, horrors! Just think of it, and the muck raker says not a word about such things.

Every now and then someone bobs up who claims to have discovered some means of controlling sex in breeding. Time usually shows that such men are mistaken. Many theories have been advanced, but nature still holds the secret and it is well enough she does. Things might be a great deal worse were man able to control sex in animal breeding.

A lady reader of this paper writes me the way she cans peas. The peas are hulled and washed clean and placed in new tin cans, filling them as full as possible. Place a grate in the bottom of the wash boiler about four or six inches above the bottom and pour boiling water so as to come up to the grate. Set the cans on this grate, put a lid on the wash boiler and boil for four hours. Press the lids tightly and seal.

About the only binding law some states have for keeping the weeds cut along the highways is the law governing a man's self respect. Most men do not like to have weeds grow along the highway contiguous to their farms, but now and then you will find a farmer who is perfectly willing to let them grow. There ought to be a rigid law for the latter. The former is not under the law at all; he does not need it.

A writer in a western paper advocates the use of fall pigs as brood sows. He

We have sugar beet, wheat and alfalfa lands at prices where you can afford to invest. Address,

SHULL BROS., GARDEN CITY, KAN.

says they make the best of brood sows. They have the size, age and strength, vigor and vitality, and have grown during a season of the year when grass has played a good part in their development and have brought them up to a time of the year when they are to be bred, so that they are sure to get in pig, and everything seems to be in their favor.

It is a noticeable fact that the bulletin board has taken the place of the kindly guide board. "Smith's Pills" seem to occupy all the space nowadays, but if a man is a stranger, "Smith's Pills" will not direct him on his journey. I am a friend to the farm bulletin board which gives the name of the farm and indicates what the farmer has for sale, for it is not only useful, but it hides no beauty of country from the passer-by.

EACH TUESDAY THIS YEAR
THE CHICAGO GREAT WESTERN RAILWAY will sell homeseekers tickets to points in Alberta, Manitoba, Minnesota, North Dakota, Saskatchewan, western Ontario and Wisconsin at rate of one fare plus two dollars for the round trip. Remember, THE CHICAGO GREAT WESTERN RAILWAY is the only line from this section which runs three solid trains daily to the Twin Cities. Also remember that on the return trip you can take any one of our four trains, making it certain that you will not have to wait but a short time for connection at St. Paul and Minneapolis. Shortest time, best equipment, best service and connections. Call on or write to E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

\$3.00 TO KANSAS CITY AND ST. JOSEPH.

On July 14th the Chicago Great Western Railway will have a popular excursion from Des Moines to St. Joseph and Kansas City at the very low rate of \$3.00 for the round trip. Special train leaves Union Station Saturday night at 10:30, July 14, 1906. Special coaches reserved for ladies and their escorts. Sleeping car rate \$1.00 per berth. Make berth reservations early and those not desiring berths will be more comfortable if they call and secure seat checks. E. J. Sawyer, C. T. A., 514 Walnut street, Des Moines, Iowa.

\$3.50 TO ST. PAUL AND RETURN, FROM DES MOINES.

Via the Minneapolis & St. Louis' R. R. Correspondingly low rates from "intermediate points." Tickets on sale July 24th, 25th and 26th; return limit July 30th. Limit will be extended to August 15th on payment of fee of fifty cents. For further information please call on or address W. K. Adams, D. P. A., or D. B. Ransburg, C. P. A., 512 Walnut St., Des Moines, Iowa.

THE HOMESTEAD

A Practical Journal for the Farmer, Stockman, Fruit Grower, Poultryman, Gardener and Housekeeper.

BY JAMES M. PIERCE.

JAMES ATKINSON, Editor in Chief.

ESTABLISHED IN 1855.

Entered at Des Moines Postoffice as second class matter

PUBLISHED EVERY THURSDAY.

SUBSCRIPTION RATES—Single subscriptions, \$1 a year; ten copies one year, \$10, and an extra copy to get up of club. In clubs of one hundred or more, 25 cents a year. Single subscription three years in advance, \$2.50; five years in advance, \$3.75; ten years in advance, \$6.00. Remit by draft, registered letter, postoffice or express money order. In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send the old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to
THE HOMESTEAD COMPANY,
Des Moines, Iowa.

CUTTING MORNING GLORIES IN AUGUST.

The following communication has been received from one of our subscribers, Mr. W. A. Banks, of Marion county, Iowa:

The morning glory can be all but killed out by one cutting in August. I know, for I have tried it. Go up and down the corn rows and as nearly as possible cut the connection of every vine. It is not necessary to strike much below the surface. Of course one will not do this kind of work if the corn is much down or the weather is hot. Last August we had a field that needed traveling and it was not done. As we all remember, 1902 was cool and wet throughout. We had a fifteen-acre piece of corn that had many patches of vines, perhaps two or three acres in all. I went over it carefully and it was nothing like as big a job as it sounds. The next spring there were only a few lone fellows. That year I went over a nine-acre patch, since which time they have been a negligible factor. Plowing stubble ground in August has not proven effective with me.

We always have more confidence in knowledge that comes from actual experience than in that which is theoretical. All kinds of vegetation is usually at a low ebb in the month of August, and it is just possible that if one can find time to do the work much may be accomplished in the way of destroying morning glories if they are cut off or pulled out at that time. The fact that there is usually not much moisture in the ground at that time may account for the effectiveness of August destruction.

SUGGESTIONS ABOUT IMPROVING CROPS.

Elsewhere in this issue will be found a communication from Prof. C. P. Bull, of the Minnesota station, on the subject of crop improvement. Professor Bull stands at the top of plant breeders in this country in the matter of practical experience. For many years he was Professor Hays' right-hand man, and since being placed at the head of the agronomy department of the Minnesota station he has been carrying on an extensive line of investigations pertaining to the improvement of farm crops.

Unquestionably our soils as a rule are not properly prepared for the reception of the seed, and this no doubt affects not only the yield, but impairs the quality. There are men in the corn belt who are able to obtain an average of sixty or seventy bushels of oats per acre for a series of years. This is done by employing the principles enumerated by Professor Bull. In the first place, the seed bed is well prepared, the grain is thoroughly graded, and third, the seed is uniformly covered, which, of course, involves the use of the drill.

The methods of preparing soil in one locality is not necessarily similar to those that should be followed in another. Professor Bull speaks about plowing ground for the oat crop. This plan succeeds much better in the wheat belt than in the corn area. Where soils are very rich the oat crop will do much better when seeded on corn ground if the surface is thoroughly disked than if it is plowed. Practically the same amount of labor involved in plowing the soil and working it down afterwards should be spent in disk and harrowing the surface where plowing is not advisable. We have in mind one field this year that was disked once before seeding and harrowed once and disked twice and harrowed once after seeding. The oats on that field to-

day have the appearance of yielding at least 25 per cent more than other fields in that locality prepared in the usual hit-and-miss manner.

What Professor Bull has to say about the grading of grain should be taken to heart by every one of our readers. Of course it will be months before we are actively engaged in the work of preparing our seed grain, at the same time we are glad to have the attention of our readers called to this matter by one who is so competent to give advice on the subject.

Features of the Iowa State Fair.

A summer school for the lovers of fine horses and cattle would be regarded as a decided novelty; but that is already an established institution in Iowa, for the annual live stock shows in connection with the Iowa State Fair, provide just such a school for the benefit of all Iowa farmers. The educational value of these live stock expositions cannot be overestimated. It is true there are no set lectures and text books are not called for; but the intelligent farmer with a live stock catalog in his hand and ability to ask questions and use his eyes properly, can gain much valuable knowledge in a week spent at the fair. It is here that the farmer and breeder meet to exchange views and compare notes for their mutual benefit. It is one of the forces that must be counted in reckoning the advancement of Iowa as a live stock state.

The fair management properly places two of its strongest men at the head of the horse and cattle departments. Prof. C. F. Curtiss, of Ames, is so well known among horsemen everywhere that his name will go far towards assuring the presence of the best breeders of the midland region. Ex-Gov. Stephen B. Packard, of Marshall county, has already demonstrated his capability in the making of a great cattle show for Iowa. He has placed the Iowa cattle exhibitions in the class with the International, the Royal, and others of world-wide fame.

Superintendent Curtiss has revised the horse list and added to the premiums until today with \$4,000 offered it represents the best in this line. In addition to the regular premiums there are silver cups offered by the Clydesdale association and gold medals offered by Percheron interests. Last year the exhibition of draft geldings and mares in four-horse and six-horse teams proved a most attractive feature, and again valuable silver cups are offered in this class.

Superintendent Packard has added this year a class for the new Dutch Belted breed, and the Polled Durhams have a special class with an added association purse. There are three special Iowa classes with an aggregate of \$1,000 offered. The Short-horn association duplicates the fair premiums up to \$1,000; and there is a special of \$500 for Herefords, and another of \$300 for Angus. The test of milk cows for a \$100 purse will be repeated this year. A new brick barn is being built to accommodate the overflow of cattle, as last year some tents had to be used.

The cattle and horse judging is in the great stock pavilion where all can see what is being done, and this has gone far toward popularizing the Iowa fairs. The printing of the live stock catalog necessitates the closing of entries in the two departments by August 1st. Exhibitors are already securing blanks and information from Secretary Simpson, of the department of agriculture, Des Moines; and if preliminary indications may be accepted as of value there will be a larger number of exhibitors than ever before.

With such an excellent crop season the attendance of farmers at the fair is likely to be fully up to all recent standards.

"Bunching" is a queer subject. Suppose we turn to page 5 and see what the Litchfield Mfg. Co. have to say about it.

\$4.50 TO ST. PAUL AND MINNEAPOLIS.
The Chicago Great Western Railway will have a popular excursion from Des Moines to St. Paul and Minneapolis and return, leaving Des Moines at 9:30 p. m., July 28th, by special train at rate of \$4.50 for the round trip. Sleeping car berth rate \$1.00 and seats reserved in Special Coaches for ladies and gentlemen without additional charge. Tickets good to return on all regular trains leaving the Twin Cities Sunday and Monday following. For full information call on E. J. Sawyer, C. T. A., C. G. W. R'y, 514 Walnut St., Des Moines, Iowa.

Telegraphy The Largest and Best Equipped College of Telegraphy in the United States. Every graduate sent to a paying position. \$40 for full course, time unlimited.

Civil Service A Full Course in Railway Mail Service. Enter at once and prepare for the examination.

Home Study Over 6000 Students Enrolled in the Correspondence School. Almost any subject you wish by correspondence.

Summer School The Summer School opens June 18, 1907. Special work for all grades of teachers.

Expenses Board \$1.50, \$2.00 and \$2.50 per week. Tuition in College, Normal and Commercial Courses, \$12.00 per quarter. All expenses three months \$45.00; six months \$85.00; nine months \$124.25. Catalogue free. Mention course in which you are interested and state whether you want resident or correspondence work.

Save Your Threshing Bills

Individual threshing outfits are fast taking the place of the big contract threshers. Just think a moment and you will see why you should have one of your own, or own one jointly with neighbors. You thresh when your grain is in its prime, from the shock or stack. You don't have to wait for the job thresher, and then thresh whether or no, wet or dry. You don't have a big crew to feed. You and your neighbors can exchange work—all the help you need.

Belle City Small Threshers

are the best type of small threshers made. They save all the grain. They run on light power, with small crew and thresh up to 1,000 bushels of wheat a day. Thresh any kind of grain or grass seed. Compact, strong and durable, and so light that they are easily moved anywhere. Write and let us mail you catalogue which explains fully.

We also make Ensilage Cutters, Horse Powers, Saw Frames, Farm Hand Carts, etc. Separate book describes each. Write for one wanted.

BELLE CITY MFG. COMPANY, Box 34, RACINE, WISCONSIN.

ROUND TRIP SUMMER RATES VIA RAIL AND BOAT LINES.

The Minneapolis & St. Louis Railroad will sell excursion tickets via rail lines to points in Minnesota, North Dakota, Manitoba, Montana, Oregon, Washington and California. Also, via Great Lakes route to eastern points. On sale daily with return limit October 31st.

or until navigation closes. For further information call on or address W. K. Adams, D. P. A., or D. B. Ransburg, C. P. A., 514 Walnut St., Des Moines, Iowa.

HOMESEEKERS EXCURSIONS.

The Iowa Central will sell round trip excursion tickets every Tuesday to points in Minnesota, Wisconsin, the Dakotas, Manitoba, Saskatchewan and the Canadian Northwest, and on the first and third Tuesdays of each month to points in the South, Southeast, West and Southwest. Rate one fare plus \$2. Liberal limits and stop-over privileges. For rates and further particulars call on agents or address A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

\$5.50 FROM DES MOINES TO ST. PAUL, MINNEAPOLIS AND RETURN, JULY 25TH.

Via the North-Western Line, will apply for tickets limited to return until July 31st, inclusive, on account of Biennial Saengerfest of the Saengerbund of the Northwest, St. Paul, Minn. Other dates of sale at favorable rates and with longer return limit. For full particulars apply to agents Chicago & North-Western R'y.

CURRENT EVENTS
AND COMMENTS

Farmers' Bulletin No. 259 is now being sent out by the department of agriculture, Washington. The subjects discussed in this bulletin are: Use of commercial fertilizers, weight of lime per bushel, spreading lime, soil sterilization, weights per bushel of seeds, disease resistant crops, corn billbugs and root-louse, asparagus rust and its control, alfalfa meal as a feeding stuff, singed cacti as forage, cattle feeding in the south, milk fever, nail wounds in horses' feet and use of cheap canning outfit. No doubt all of our readers will be interested in any one or more of these topics, and we suggest that application be made to the department of agriculture, Washington, D. C., for this bulletin.

George B. Ellis, secretary of the Missouri State Board of Agriculture, Columbia, Mo., has prepared a fifth edition of a bulletin on good roads. This bulletin gives the results of an extensive experience in the use of the King drag, including not only the character of its work in Missouri but also in other states. Until the supply is exhausted a copy of this bulletin may be obtained free by making application to Mr. Ellis.

It is said that pressure would be brought upon President Roosevelt to secure a pardon for Frank G. Bigelow, the former Milwaukee banker now serving a sentence at the federal prison at Leavenworth, Kan., on the ground that the prisoner's health is failing. Mrs. Bigelow and her son left today after visiting the prisoner. Their visit is believed to have been made in connection with an application for pardon which probably will be filed this year.

Wm. J. Bryan attended a dinner held in London, July 4th, there being in attendance about 500 Americans and their friends. Ambassador Whitelaw Reid and Wm. J. Bryan engaged in some good-humored rivalry. Mr. Reid referred to the fact that the country loved both by himself and Mr. Bryan had not

been ruined by its gold abroad, to which Mr. Bryan rejoined: "Without reference to the ambassador's remarks on gold, I wish to say that when I see the progress my country has made walking on one leg I wonder what it would have done walking on two legs. It is pleasing to testify that the ambassador not only has fought me, but that he has done it well. No American rejoices more than I that he is 3,000 miles from his base. While abroad I have met many good republicans—holding office—and I fully wish there were enough offices abroad to take all the republicans out of the country."

The announcement is made on good authority that Senator Depew, of New York, who was absent from his duties during most of the session of congress which has recently closed, suffering from a nervous break-down, has practically recovered. He expressed no intention of resigning from the senate, it being his present plan to spend the summer in Europe and return in readiness to take up the work in congress at the opening of its next session. It will be remembered that some of the insurance exposures reflected no small degree of discredit on this widely known New Yorker.

The federal grand jury of Washington, D. C., has begun an investigation into the operations of an ice trust, with a view to criminal prosecution of the local officials under the anti-trust law. While it is not believed that there is a national ice trust, yet there is a general understanding or series of agreements to divide compensation into particular fields with regard to the national ice supply. An incident of this kind only emphasizes the independence of those who are able to store their own ice supply, as is the case with most farmers of the corn belt.

The report of the joint committee of the Chicago commercial associations and Illinois manufacturing associations concerning the packing industries of Chicago has recently been made public. The following extract indicates that wholesome products are being turned out by the large packing concerns: "As a result of the investigation we ourselves have no hesitancy in stating that the meat products at the yards are wholesome and proper food. We find that the companies have been improving the conditions and products from year to year, that improvements are constantly being made and will be made, and we believe that the conditions and surroundings at the plants carefully protect the quality of the product."

HOMES FOR THOUSANDS—GREAT PREPARATIONS ARE BEING MADE FOR THE SHOSHONE RESERVATION OPENING NEXT MONTH.

Mr. Clarence T. Johnson, the state engineer of Wyoming, says that the irrigation plans now being completed for the Shoshone reservation lands that are to be thrown open to homesteaders provide for the irrigation of 300,000 acres of the finest agricultural land in the West. The soil, says Mr. Johnson, is better and more uniform in quality than in other irrigated lands and the water supply of the Big Wind river cannot be surpassed anywhere.

The soil is a sandy loam, gently sloping to the south and east and the only part that cannot be irrigated are a few ridges that serve as windbreaks and shelter the agricultural country. In fact, stockmen have admitted that this section of Wyoming does not make a good winter range for the reason that the wind does not blow and the snow lies on a level, making forage conditions less desirable than where the wind is heavy.

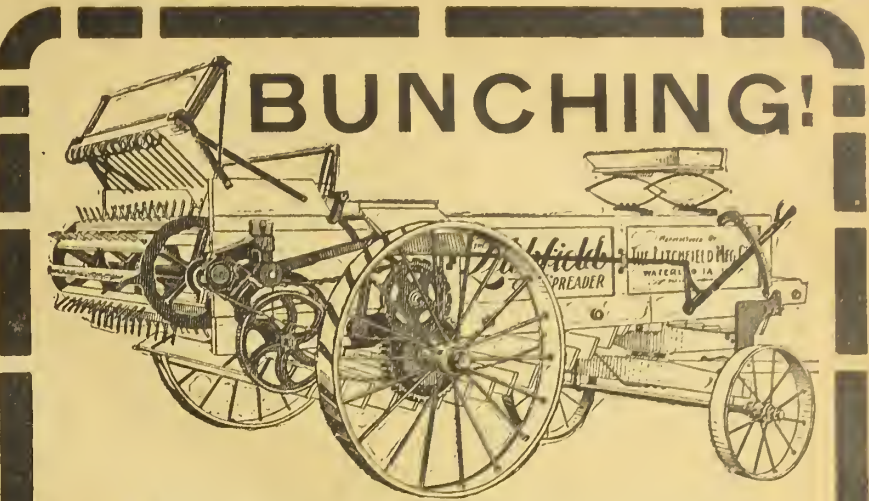

The ceded portion of the reservation lands lie from 4,600 to 5,600 feet above the sea level, and the farming which has been done along the river shows results that indicate that all kinds of crops can be grown.

Wyoming Looks Good.—Present conditions indicate that Wyoming will be at her best to welcome the influx of homesteaders this summer. The grass has a splendid start; there is an abundance of moisture which will assure a splendid range, and easterners will find as sleek herds in Wyoming as can be seen in any part of the country.

The Reservation Opening.—The president's proclamation has been given to the public and July 16th to 31st, inclusive, are the dates for registration. Beginning August 4th the names of those who have registered will be drawn to ascertain the fortunate holders of numbers entitled to make entry of a quarter section each. This final entry will take place at the rate of 100 entries per day, beginning August 15th.

Shoshoni and Lander, on the new railway extension connecting with the Chicago & North-Western Ry. at Casper, are the points indicated by the government for registration, and the final entry will be made at Lander.

Thousands of prospective homesteaders will visit Wyoming this summer to participate in this big opening of homesteads. The railroads have made special rates of less than one fare for the round trip for this occasion, and the train service will be especially arranged for the convenience of visitors.

A Bunch to Start---A Bunch to Finish.

THE other kind—not the Litchfield Spreader—does this class of work. Every manure spreader should have a good substantial endgate between the load and the beater wheel. This endgate is necessary to keep the load away from the wheel until this wheel is put in motion. If this endgate or "tailgate" does its work properly, the distribution will be the same on the start as at any other time.

The packing of the manure against the beater wheel while hauling the loaded spreader to the field, is what causes the big bunch when the machine first starts. To avoid this bunching the Litchfield Spreader uses a solid endgate that will hold the load, not simply a comb or springs, because a heavy load cannot be kept away from the wheel with spring teeth. A movable wheel or spring teeth designed to take the place of a solid endgate will not work on fine manure or manufactured fertilizer. All spreaders should have a solid endgate like the "Litchfield" uses, to keep the load in the box, whether it is fine or coarse, and hold it there until the spreader is ready to distribute in the field.

We do not want to discredit other machines that do good work after the first bunch is dumped on the ground, but we do want to tell our trade that the Litchfield Spreader does universally good work, right from the start, and that this is one of the many reasons why this spreader is entitled to the careful investigation of our customers.

If a spreader is used to haul a load any considerable distance, or if used over rough roads, or on up-hill grades, the tendency of the load is to crowd back and pack against the rear. An endgate (not an excuse for one) is just as necessary as it is in a farm wagon. Like the other necessary features for a modern spreader, this takes a prominent place on the Litchfield machine.

We have explained why a rear endgate or tailgate is a necessity to prevent bunching, and next week we are going to tell you about another endgate proposition that also has much to do with bunching. We are posting you on our machines and ask you to let us know what you need in our line.

pecially arranged for the convenience of visitors.

The New Town of Shoshoni.—Two and one-half miles from the reservation border a new city has sprung up since the town was plotted some months since. Its population is of that active western sort that shows its aggressive, pushing policy by getting ready for the future. It has banks, hotels, stores and all those things that older cities possess for the convenience of its citizens and the stranger within its gates.

The building of the Wyoming & North-Western Ry. to this point will make it one of the great stock shipping centers of Wyoming.

The terminus of the new line is to be at Lander, an older city, in the beautiful Lander valley, where a great deal of irrigation has been done.

These western people propose to take care of the crowds during the reservation opening in the best possible shape, and with that end in view have inaugurated a system of hotels and boarding houses under municipal control. It is stated that there will be no exorbitant prices charged and

no unfair advantage taken of the rush of business, and municipal ownership will receive a trial under surroundings that are certainly unique.

Great Interest is Manifested.—The public is showing a great deal of interest in this opening of reservation lands to settlement and the passenger department of the Chicago & North-Western Ry. is sending out to inquirers thousands of copies of pamphlets which tell in detail how to secure a quarter section of this land and what may be expected in the way of the character of the soil and plans for irrigation.

HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

George Wilkins, of Ohio, writes the *Practical Farmer* as follows: "To get the remaining flies out of the sick room (or any room) cut a piece of screen

7" square, attach a handle of light wood like a fan, by sawing into end 2 inches and tacking through. You can bat one every time you strike. This does not mash them on wall or furniture, but they should be picked up as fast as killed."

In an exchange is a device for keeping gates up, illustrated as follows: "Gates, when made long enough for wagons to pass through, are always inclined to sag. Some means must be employed to prevent this happening, and no method equals that shown in cut. Back post

is allowed to extend about four feet above gate. An iron is driven in post near top; a harness ring is dropped over this and a wire reaches from ring to center of gate. This arrangement cannot be beaten."

In a Canadian paper a pump is illustrated and described for a deep well as follows: "The shell head of the pump is of cast iron. The well pipe, which consists of one and one-half inches of galvanized iron piping, screws into the pump at the back of the spout. This arrangement renders the pump frost-proof. The cylinder is three or three and one-half inches in diameter and sixteen inches long, and is situated sixteen feet from the bottom of the well. The water enters the foot valve through a strainer, which admits it at the sides and not at the bottom. This arrangement prevents the entrance of sand. The pump should have an eight or ten-inch adjustable stroke, according to the strength of the pumper. [Many deep well pumps have the bucket in the bottom of the well and the water is lifted instead of being drawn as shown in the illustration. This is probably the most common practice in deep well pumps.—Ed.]

The following device for preventing depredations of the horse fly is given by the *Farm and Home*: "During recent years this pest has proved very irritating to animals in some sections, owing to the large numbers that collect on their bodies and the severe bites which they inflict. It prevents beef cattle from

PATENTS
ORWIG & LANE,
DES MOINES, IA.

Send sketch or model of invention for free opinion as to patent ability. Reference, Ia. Homestead

A representative of The Homestead called upon Dr. W. O. Coffee, the well-known eye and ear specialist, at his infirmary in the Century building in Des Moines a few days ago, to make inquiries in regard to the large new building Dr. Coffee is soon to erect to accommodate the operative part of his immense practice. "I am glad you called," said the genial Dr. Coffee, with a cordial hand-shake. "I have been wanting for some time to tell you how pleased I am with the results of my advertising in The Homestead. I do not hesitate to say that my investment in Homestead space pays better than in any other farm paper in the United States; and I use a great many of the best mediums of this class."

"I have advertised in The Homestead regularly for the past eight years," added Dr. Coffee, "and it has always paid me, summer, winter and all the time, although most publications do not bring satisfactory returns in the summer. My experience justifies me in saying that I believe The Homestead is the only farm paper in the country that every advertiser can afford to stay in with large space regularly through the summer and fall. My advertising in The Homestead during the summer and fall brings me inquiries at almost as low cost as in the winter. No other paper among the many excellent ones I use brings me such generous cash results as The Homestead. Your progressive policy of constantly building up your lists by adding new subscribers is the only correct one. All that I say about the great and growing value of The Homestead to advertisers is verified by my books, as anyone interested can see for himself."

Another highly pleased advertiser of The Homestead is Mr. Frank Foy, the popular and enterprising poultryman. "No medium among the large number that I use approaches yours in results received from the money expended," said Mr. Foy to a Homestead representative recently. "I attribute this to two causes—the excellence of your medium and the splendid service you give the advertiser. No publisher in the country shows a deeper interest in the success of his ad-

vertising patrons than does the proprietor of The Homestead. Your co-operation is generous, intelligent and broad-gauged. It is a pleasure to do business with your office. I used to think that there would sooner or later be a falling-off in Homestead results; but, instead of that, every year witnesses a decided improvement."

growing rapidly and so irritates milk cows that there is a considerable loss. Among various remedies which have been suggested the Virginia Experiment Station found that one of the most practical was to spray the animals daily for a week or two, which will practically exterminate the pest. The apparatus consists of pipes arranged with a number of nozzles, so that when the animal is driven through the opening the spray will entirely cover the body. An ordinary force pump attached to a barrel will supply a sufficient stream to do effective spraying. The solution found to be the most satisfactory consists of an emulsion made of two gallons kerosene, one and one-half pound yellow soap and one gallon water. This stock solution is afterwards diluted in proportion of one to five parts water and thoroughly mixed through the pump before using. In connection with this apparatus there must be constructed a chute to the building so that the cattle may be made to pass through the spray, which they sometimes object to doing, and a pen arranged where they may be confined for a while after treatment. The solution will kill the insects while the animal passes through the spray if their movement is not too rapid. Fifteen gallons diluted solution is sufficient to treat 100 cattle when the operation is well carried out.

Mr. W. D. Wilkinson, of Oklahoma, in the *Epitomist*, writes: "For stretching wire here is the best and most practical thing I have ever used and I have used everything usually employed for this purpose, from a wagon to a patent wire-stretcher. A cast-off buggy wheel, an iron shaft or rod twelve or eighteen

inches long and heavy enough to stand the work, preferably one and a half or two inches in diameter, and a bail made of one-inch iron will be all the equipment needed. It is hardly necessary to add more, as it is self-suggesting to anyone who has ever stretched wire. The wire should be fastened to a spoke on the side opposite the dish in the wheel, and is manipulated in other respects the

same as a wagon which is in common use. This outfit will cost less than any patent wire stretcher and can be used in quarters too close to permit the use of a wagon; can be manipulated by one man and changed from one angle of corner to the other in a minute's time, will not upset as a wagon sometimes will when trying to fasten wire high up on the post, as the whole thing can raise up a foot or two without disorganizing any part of the arrangement, does not injure the front of an \$80 wagon, and can be wheeled from one place to another as easily as a common wheelbarrow."

Prof. R. S. Shaw, of the Michigan Experiment Station, describes a movable summer piggery as follows: "One of the most complete and serviceable hog houses for summer use in lots where hogs are being pastured on soiling crops is shown in the cut. It is 6x8 feet at the foundation, the sides being perpendicular for 3 feet, with a half pitch roof of boards. The comb boards are hinged so that they can be opened in the hot weather. A window at each side is also provided, which is covered on the inside with strong

woven wire. This adds much to the coolness of the house in the summer time. The pen is built upon a frame of 2x4 scantling, the lower timbers of which are beveled at the ends to permit of skidding it about from one place to another."

SUMMER VACATION IN COLORADO.
LOW RATES VIA ROCK ISLAND LINES.
Colorado, as a place for recreation, is the choice of many thousands of summer tourists.
Colorado is a land of clear, pure air and golden sunshine. It is a land of sparkling mountain streams and glassy-surfaced lakes. There are more enjoyable things to do, more grand sights to see in Colorado than any other place under the sun.
From June 1 to September 30 Rock Island Lines will sell summer tourist tickets at rate of \$21.75 from Des Moines, Iowa, to Denver, Colorado Springs or Pueblo and return. Return limit October 31. July 10 to 15, inclusive, the special round-trip rate of \$19.25 from Des Moines, Iowa, is effective.
This latter rate is authorized on account of the Elks' Annual Meeting at Denver July 16 to 21. Tickets limited to return to August 20.
Very low rates will also be in effect to Glenwood Springs, Colo., Salt Lake City and Ogden, Utah, Yellowstone National Park and to the Pacific Coast, with cheap rates for side trips to nearby points of interest en route.
New and improved train service via the Rock Island is an important feature for the Colorado traveler to consider.
Full details of rates, routes, service and any information desired will be gladly furnished by the Rock Island Ticket Agent at 423 Walnut St., Des Moines, Iowa. Geo. R. Kline, C. P. A.

CHEAP R. R. RATES VIA M. & ST. L.
Every Tuesday homeseeker round trip tickets to Minnesota, North Dakota and Canadian Northwest, also first and third Tuesdays to Montana, Washington, etc., at one fare plus \$2.00.
Summer tourist round trip rates to Minneapolis and St. Paul, also to points in Minnesota and North Dakota on sale daily after June 1st, return limit October 31st.
Special round trips daily June 1st to September 15th to Portland, Seattle, San Francisco and Los Angeles.
For particulars call at the M. & St. L. ticket office, 612 Walnut St., Des Moines, Iowa.

The Publisher's Corner

far-off Poland, ordering for Mr. A. Neehaev, No. 58 Zlota street, Warsaw, a catalog of the Sure Hatch Incubator Co., of Clay Center, Neb. Mr. Otto Barth, general manager of the company, noticing that the "key number" used in addressing this inquiry was that used in the Homestead advertisement, sent us the postal card, with a pleasant note, saying: "I don't know whether you have any subscribers in Russia or not, yet it is certain that in Poland's historic old capital, in the land of Kosciusko, the Sure Hatch Incubator Company is well-known, evidently through the medium of The Iowa Homestead, as you will note from the attached card, which bears the key number by which we 'check you up.'"

The above is no rare occurrence, as advertisers frequently receive inquiries from the remotest corners of the world through Homestead advertising. In many of these cases, the papers are sent by American subscribers to their friends in foreign lands, where readers are attracted, just as people at home are, by the advertisements which are now a valuable feature of every successful publication. A modern advertisement is always liable to travel far and live long. There are many cases in which answers to advertisements are received years after they were printed. The great volume of replies comes soon, but it is a long time before all the direct fruits are gathered; and, as for the indirect results, there is no end to them in a well-conducted business.

The month of June was a wonderfully good one for The Homestead's circulation department. The affection of the people for a favorite paper has no truer criterion than that of their cash remittances to pay for it. When our May subscription receipts proved to be double those of the previous May, we had little expectation that June, ordinarily a quiet month, would maintain so rapid a rate of growth; but, to our surprise, June brought in more than three times as large receipts as June, 1905! Who, in the light of such a demonstration, says that The Homestead's friends are not very staunch ones and increasing in number?

OUR DAIRY DEPARTMENT

All communication relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

FEEDING CALVES FOR BEEF.

BY W. J. KENNEDY, IOWA EXPERIMENT STATION

There are a great number of calves, the offspring of the general-purpose grade Short-horns which are commonly found on farms, that are raised on skim milk, and are used for the production of beef. It is easy by good feeding to produce excellent animals in this way, but as everyone who has bought steers for feeding can testify, great numbers of these cattle are utterly spoiled by bad methods of feeding during the time they are calves, and are so stunted that no amount of good feeding at a later period can make really good cattle of them. It is of the utmost importance that the calf which is intended for beef should have a good start, and should form while yet a calf those habits of growth, thriftiness and constitution which are the necessary characteristics of a good beef animal. To accomplish this end, good and careful feeding is a necessity.

In the milk food of the calf raised for beef a little generosity will prove the best economy. Those who take the calf at once from its mother and put it on skim milk at the end of a week or ten days, may save a little cream, but they run the risk of injuring the delicate digestive organs of the young animal so as to permanently retard its growth. It is a much safer practice to allow the young calf to remain with its mother for a day or two, so that she may nurse it and give it a good start; then to remove it and give it warm, new milk, in moderate feeds, twice a day for four or five weeks. It is a great mistake to feed even new milk from a pail in excessive quantities. Four or five quarts twice daily will be found ample feed, and to feed more is to run the risk of upsetting the youngster's digestive organs, even while all new milk is being fed.

At the end of four or five weeks the calf is stronger, and a gradual change may be made from new to skim milk, taking ten days to two weeks to make the change and being careful to have the skim milk as nearly as possible at the temperature of new milk. At the same time some equivalent for the cream taken from the milk should be added. Starch, of course, fills much the same place as a food that fat does. It is not well, however, to use starchy foods as an equivalent for the butter-fat of the milk. The digestion of the starch is affected through the action of the saliva of the mouth, and where starchy foods are fed in milk, they almost entirely escape this action, pass on to the stomach undigested, and cause trouble; hence, the fashion of feeding the meal of the ordinary grains in the milk, either raw or cooked, is not good, and is liable to lead to digestive troubles and perhaps to scouring. The best substitute for the cream taken from the milk is, by all odds, flaxseed, either whole or ground, boiled into a thick gruel. Flaxseed contains a very large proportion of fat and protein, and a very small amount of starch, hence it may be fed safely in milk as the action of the saliva is not so much needed in its digestion. Fed in small quantities at first, and afterwards increased until two cupfuls of the gruel are fed in the milk, it not only forms a good cream equivalent, but has an important action in preventing constipation and promoting that general appearance of thrift and well-being which is characteristic of the well-doer among beef cattle. The flaxseed should be continued

until the calf is eating grain very freely. It is well to continue to feed milk as long as we can; at least till the calf is six or seven months old.

As soon as possible, while the calf is yet on new milk, it should be taught to eat. For this purpose, a little good clover hay is very valuable. Whole oats are very soon relished and the calf may safely be allowed all he will eat. It is very important, however, to see that no food is left in the manger. We should be very careful to feed no more than will be eaten up at one feed, and if any is left it should be cleaned out of the manger before another feed is given. In the winter a little pulped roots, or even silage, may be given with advantage. In the summer we believe it is well to give the calves the run of a small paddock of grass, provided with a shelter from the sun during the heat of the day. Calves so treated do not present the sleek, smooth appearance of those which are kept constantly in the stable, but they develop a better constitution and do better afterwards when turned out on the grass as yearlings to shift for themselves.

GREEN CORN FOR COWS.

Ordinary field corn makes an excellent supplement to dry or short pastures during the summer months. It is not necessary to wait until the crop is eared, as the fodder is rich in milk-making elements, though of course it is very succulent.

Some dairymen adopt the practice of cutting a sufficient supply of green corn to last for a period of three or four days. In this way the crop is dried out and pound for pound the fodder is made much more nutritious. It will not then tend to scour cows so badly, and though drying may reduce its palatability somewhat, yet its increased richness due to the evaporation of the juices will more than offset this loss.

The feeding of green fodder not only increases the milk flow at the time, but it helps to sustain a large flow longer. If the cows are let down in their milk now, they can never again be brought up to as high a standard during this lactation period as if they had not been allowed to shink.

This Is The Cleveland Cream Separator

We will send it to you

Free

We mean what we say; you can have this great cream separator shipped to your home, you can use it, try it against any other cream separator made and you need not pay one cent, sign any paper, nor put up your money in the hands of any bank or express company until you have had a fair free trial of what the machine will do.

You Pay No Man Any Money In Advance.

Do you want to know why we can do this? Because the Cleveland is the only high class separator in the world that is sold at a reasonable price.

It is shipped to you direct from the factory. The Cleveland skimming device is made of aluminum. The cleanest and lightest metal in the world.

Ball Bearing

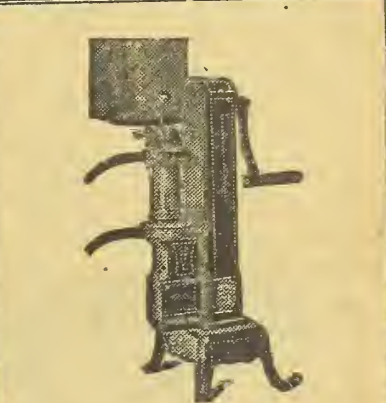

all through and so easy running that you can hardly believe it's working.

But try the Cleveland. It won't cost you anything, and there'll be no fuss made if you don't want to keep the machine after the thirty days trial. Write for free catalog now anyway.

THE CLEVELAND CREAM SEPARATOR CO.,
33 Michigan Ave., N. W., Cleveland, Ohio.

AGENTS wanted. Send 25 cents for sample by prepaid express.
Klinchert's Fine Soap Co., Lake City, Iowa.

When writing please mention this paper.

You Want All The Cream

Therefore You Want the

Iowa Dairy Separator

No other Separator made extracts every particle of cream. Some is always left, and this "some" is your loss.

The "IOWA" does not take part of the cream part of the time. If it did, it would be no better than the others; but it takes all the cream all the time. A Separator that does less than this you cannot afford to buy. Gold medals at World's Fair and Portland mean something. Write today and ask for catalog 25. It's free, and you will find your investment of one cent in a postal card the best you ever made. All sizes from 250 to 750 pounds. Address,

The Iowa Dairy Separator Co.,
Waterloo, Iowa.

WINTER Wheat, 60 bushels per acre. Catalog and samples free. John A. Sulzer Seed Co., La Crosse, Wis.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

ADJOINING FARMS—FENCES.

Mr. W. E. Hart, Lamoni, Iowa.—A., B. and C. own adjoining farms in Missouri. A. has given B. and C. written notice of his intention to move his division fence and build his own fence, which will make a "Devil's Lane." (1) How far from the division line must A. set his fence? (2) How far back from the division line must B. and C. set their fences?

Answer.—(1) Anywhere on his side of the line. His fence may extend right up to the line, but not on it or across it. (2) Same answer.

TAXATION IN NEBRASKA.

A Subscriber, Arcadia, Neb.—(1) I have shares of mining stock in an undeveloped mine in Colorado. Does the law of Nebraska require me to give them in to the assessor? (2) If I own stock in an incorporated mercantile company located in another state, does the law of Nebraska require me to mention it to the assessor?

Answer.—(1) It does. The first subdivision of section 28, chap. 73, page 394, laws of Nebraska of 1903 provides that every person of full age and sound mind being a resident of the state shall list for taxation (among other things) all his stocks, shares of stock of joint stock, or other companies, when the capital stock of such company is not assessed in this state, etc. This answers also the second question.

OWNERSHIP OF ISLAND.

A Subscriber, Hutchinson, Kan.—A. recently bought a piece of land bounded on one side by the Arkansas river. The former owner had fenced in a large island with the pasture. The island is covered with cottonwood trees. B. wants to take some poles from the island, but A. is unwilling for him to do so. (1) Has B. a right to cut and remove poles from the island? (2) Has A. a right to control the island and pasture it?

Answer.—(1) A's boundary line must be the middle of the river; that is, if his deed calls for land bounded on one side by the river, his line runs in the middle of the stream, and he is entitled to all the land within his boundary lines, whether it be island or not, therefore B. has no right to cut or remove poles within A's lines. (2) A. has a right to control the island and pasture it if it be within his lines. Now, you see how difficult it is to answer a question where the main facts are omitted from the statement. The main river may be on either side of this island—the middle of the stream may be on

either side, with but little water running on the other side, or there may be two channels with a stream in each so near equal that there are two threads of the stream where the island is located.

CONSTRUCTION OF CONTRACT.

A Subscriber, Leon, Iowa.—A. rented 180 acres of land to B. for cash rent. The contract states that B. is not to pasture the meadow in wet weather. Has B. a legal right to use the meadow for pasture during the season, if he keeps his stock out in wet weather?

Answer.—He has that right.

DRAINING GOVERNMENT LAKE.

Mr. W. C. Bennett, Richmond, Wis.—(1) There is a government lake near my farm which might be drained and leave some good farm land. If I should drain it across my land into a river what right would I have to the land drained? (2) Would I be liable to parties living on the bank of the lake who depend on it for water if I should drain it?

Answer.—(1) None at all. (2) We think you would, besides it might involve you in an unpleasant controversy with the United States government.

NO LEGAL CLAIM.

Mr. R. S. A., Churdan, Iowa.—A. borrowed a sum of money from B., giving him a chattel mortgage as security. A. turned over to B.'s agent a mare that was sold at combination sale. By reason of a mistake at the bank, or trickery, the note was made out to A., and C. attached the note as the property of A., which caused B. considerable trouble and expense in attending court, etc., and C. dropped the suit without having it go to trial. Can B. recover the amount of his expenses and for his trouble from A.?

Answer.—He cannot. He has no legal claim whatever against A. upon the facts stated.

NOTES ARE CREDITS.

A Subscriber, Le Roy, Minn.—A. lives in Minnesota and holds a mortgage on land in Iowa, which is recorded in Iowa. In which state must A. pay taxes on the mortgage?

Answer.—The notes secured by the mortgage are the things on which taxes are levied. They represent the debts of the mortgagor, and are credits in the hands of the holder, the mortgage being merely auxiliary to them—security for their payment. These notes are personal property, taxable where the holder lives, hence A. must pay taxes in Minnesota and not in Iowa.

LAND DEAL—RIGHT OF WAY.

Mr. Fred Lillenthal, Atlantic.—(1) On the first of April, 1906, I bought a farm. People have been in the habit of driving through it for years, by opening gates. I am to move on the farm in March, 1907. Can I then stop people from driving through it? (2) When I bought the place the owner told me there was so much land in grass. Afterwards the renter on the place plowed up some sod. Can I compel the seller to pay damages?

Answer.—(1) We think you can. (2) We think not. Your statement omits some very important facts. You do not say whether or not the place used by the people in going through your farm is in fact a road, or how many years they have used it, nor do you give any of the terms of the purchase and sale of the land.

TAX TITLE IN ALABAMA.

A Subscriber, Muscatine, Iowa.—(1) When land is sold for taxes in Alabama, how long is it before the purchaser can get his tax deed? (2) What steps are necessary to redeem land sold for taxes in Alabama? (3) If my land in Alabama has been sold for taxes, can I settle the matter with the purchaser so as to get good title without court proceedings?

Answer.—(1) Two years. (2) You must deposit with the judge of probate of the county where the land lies the amount of money the land sold for, with interest thereon at fifteen per cent per annum and all subsequent taxes, with interest thereon at eight per cent per annum, and all costs of taxing officers, and one dollar to the probate judge as his fee. (3) You can, by having him make you a quit claim deed, and paying all subsequent taxes on the land.

VARIOUS CRIMINAL OFFENSES.

A Subscriber, Allen, Neb.—(1) In order to avoid driving around eighty rods a person tore down a partition fence and left it in that condition. What is the penalty? (2) A person shot pigeons on the roof of a neighbor's barn without his consent. What is the penalty? (3) A. was walking across a man's field and the owner's dog started towards him, barking, and A. shot the dog, killing him. What is the penalty? (4) If these acts or any of them were done on Sunday would that increase the penalty?

Answer.—(1) If it was done wilfully and maliciously a fine not exceeding \$100, or jail not exceeding thirty days, or both; if not maliciously the offender would simply be liable for damages to the owner. (2) A fine of from \$5 to \$100 for each offense, and also liable for damages. (3) If the shooting was malicious, jail not exceeding thirty days and fine double the amount of injury done; if not malicious, liable for damages for the injury done to the dog. (4) Hunting, fishing or shooting on Sun-

TRADE MARK
This trade mark stands for unquestioned quality. It's found on every roll that leaves our factory.

Rex Flintkote Roofing

Rex Flintkote Roofing is made of long fibre wool felt, chemically treated and covered with a water-resisting, acid, alkali and rot-proof material. It is unaffected by either heat or cold, contains no tar or paper, and is an effectual guard against fire from falling sparks.

Send for Free Samples and learn for yourself why Rex Flintkote to-day is being chosen for all kinds of buildings under all climatic conditions in preference to all other roofings, irrespective of their name or price.

J. A. & W. BIRD & CO.
Agents Everywhere

Any one can lay Rex Flintkote Roofing. Full directions and everything necessary accompany each roll.

We want you to read our Free Book on Roofing. It will show you photographs of buildings like the one pictured above, which are proving our claims for Rex Flintkote Roofing. Every dealer has it or can get it. Of course, it has imitations, the kind that costs about one-half as much to make and sells for a little less. A good dealer prefers the genuine; for a good dealer prefers your good-will to a questionable profit. Ask him to show you the trade mark. "Look for the Boy" on every roll.

86 India St. Boston, Mass.
Agents Everywhere

day renders the offender liable to a fine not exceeding \$20 or twenty days in jail, or both, at the discretion of the court.

EXPENSES OF INSANE PERSON.

A Subscriber, Beaconsfield, Iowa.—A. and B. are husband and wife. B. was adjudged insane and sent to the asylum. Who is liable for the expenses necessary to keep B. at the asylum?

Answer.—The county where A. and B. resided must first pay the expenses, but the amount will then be collected from A., the husband, by the county auditor, under the direction of the board of supervisors.

RIGHTS OF ADOPTED CHILD.

A Subscriber, Iola, Kan.—A married man in Kansas, having no children, made his will leaving all his property to his wife "to have and to hold, and her heirs, of which I may or shall die possessed." He named his wife as executrix. After some years they adopted a child, having none of their own, and later the man died. Who is entitled to his estate?

Answer.—The widow and the adopted child, if the child was adopted according to law, each being entitled to half the estate.

DISCHARGING DRAINAGE WATER.

An Iowa Subscriber.—A. and B. own adjoining farms. Can B. lawfully empty his tile drain directly under the partition fence where there is a natural watercourse?

Answer.—Under the drainage law of 1904, B. has the right to discharge his drainage water from tile drain anywhere on his own land, into a natural depression that leads to a water course, or into a water course, without being liable to anybody. He may empty his tile in such a place, right at the line of his own land.

NOTICE TO QUIT—MORTGAGE.

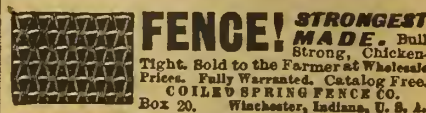

Mr. F. H. K., Madison, Neb.—(1) In January last A. rented his farm to B. for one year from March 1, 1906 to March 1, 1907, by a written lease which provided that at its termination on March 1, 1907, B. shall, without notice, deliver to A. peaceable possession of the premises. On Feb. 28, 1906, A. sold the farm to C. and gave C. a copy of the lease so he could receive the rent, which is one-third of the grain and one-half of the hay crop. The lease also provides that it shall not be renewed except by writing the renewal thereon. C. has been told that he must give B. six months' notice to quit prior to March 1, 1907, in order to get possession at that time. Is this correct? (2) When no interest is paid or demanded on a real estate mortgage, when does it become outlawed?

Answer.—(1) It is not correct. When the time of expiration of a tenancy is fixed by the lease no notice to quit is necessary. (2) Ten years after the mortgage notes become due.

EXECUTORS AND ADMINISTRATORS.

Mr. J. H. Downs, Clearfield, Iowa.—(1) Please define "administrator" and "executor," and state fees allowed by law for acting as such. (2) Under what conditions may a person be appointed executor without giving bond? I notice by the court proceedings that this is done.

Answer.—(1) An administrator is appointed by the court to settle the estate of a deceased person who leaves no will. An executor is appointed where a deceased person has left a will, to execute the will—that is, to settle the estate according to the will. One or more executors are usually named in the will, and the court appoints the person or persons so named, but if none is named in the will, a suitable person is appointed by the court. The law allows an administrator or executor commissions on all money coming into his hands from sales of property, or from money, five per cent on the first \$1,000, on excess

FENCE! STRONGEST MADE. Bull Strong, Chicken Tight. Sold to the Farmer at Wholesale Prices. Fully Warranted. Catalog Free. COILED SPRING FENCE CO. Box 20, Winchester, Indiana, U. S. A.

over \$1,000 and less than \$5,000, two and a half per cent; on excess above \$5,000, one per cent. (2) Only where it is so requested in a will.

TAXATION OF PROPERTY.

A Subscriber, Bancroft, Neb.—My personal property was not assessed for taxation in the spring of 1905. On the first day of February I offered to pay taxes, but there was none against me on personal property. On the fifth day of March the officers wrote me that I must pay the same taxes as in 1904. Does the law require me to do so?

Answer.—We do not know. The law gives considerable power to the county assessor and other county officers in the matter of correcting assessment—adding to the same of property omitted in listing for taxation. It is most likely that you will have to pay the taxes mentioned.

ADVERSE POSSESSION TEN YEARS.

A Subscriber, Milton, Iowa.—A. and B. own adjoining farms. There is some difficulty in locating a corner on account of county line. A. claims that B.'s fence is over on him two rods, and B. claims ownership, as his partition fence has been there for twelve years. A's deed is for five acres more or less; the prior deeds to same boundaries call it five acres. (1) Does fencing and possession for twelve years constitute ownership? (2) If B.'s contention is lawful thereby depriving A. of some land has A. a lawful claim on the party from whom he bought the land?

Answer.—(1) If B. has occupied the ground up to the fence, claiming to own it for more than ten years, it constitutes title in him by what is called adverse possession. (2) We think not.

A SMALL MERCHANT.

Mr. B. F. Parker, Haviland, Kan.—A merchant issued cards as follows: "Premium card. Bring this card with you to . . . (his store) and receive credit on your cash purchases. Amount of this card is \$50 and as soon as this amount is bought the holder will be entitled to a premium valued at \$7.50. The premium consists of a fine iron bedstead, rocking chair, or any other piece of furniture valued at \$7.50. This is a special inducement to our customers, and will last but a short time; it is a net saving of 5 per cent on your purchases. Credit will be allowed in all lines except groceries." I was given one of the cards and traded out the amount according to it, but the merchant refuses to give me any premium. What can I do?

Answer.—You can sue him and get judgment against him for the amount of \$7.50 and collect it if he is financially responsible, but the expense and trouble of doing it will make it hardly worth while.

INSOLVENT BANK—RECEIVER.

A Subscriber, Coon Rapids, Iowa.—A. had a certificate of deposit for a sum of money, in a bank. The bank became insolvent. A. presented his certificate to the bank, and the bank paid him part of the amount deposited, and issued to him a new certificate for the balance. The bank paid some of its depositors in full, but refused to pay others. It is in the hands of a receiver. (1) Can the officers of the bank be prosecuted for re-issuing certificates as described? (2) What remedy have depositors who have not received their money?

Answer.—(1) It depends upon whether the actions of the officers were intentionally fraudulent. If it can be proven that they were, the officers are subject to a fine not less than \$500, or imprisonment not less than one year. (2) The receiver acts under the direction and supervision of the court, and the only remedy is to make application to the court, in case the receiver fails to do his duty.

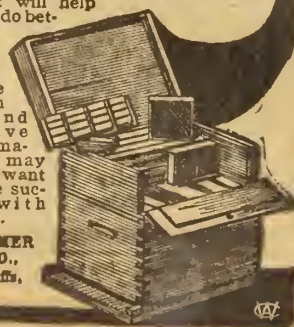

GET MORE HONEY

If your bees are not doing their best, what's wrong? Are your hives the latest design or are they some old back-number affairs? Won't cost much to give your bees the best there is. Let us show you how cheap you can do it. We manufacture a complete line of

EVERYTHING TO HELP YOU

Our 42 years devoted to this business has resulted in a line of up-to-date bee-factories and supplies that bee-keepers praise for their superiority. The way to get more honey is to encourage your bees—help them to help you. More honey means more money. Our free book, "Hints on Bee Culture" will tell you how to get more money. It will show you how to keep your bees at work, and our free catalog will show you a line of supplies that will help your bees do better work for you. Write for the books today—we send them free, and gladly give any information you may want. We want you to be successful with your bees.

Connell Bluffs,
Iowa.

VETERINARY MATTERS

PROFESSIONAL veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of \$1.00. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

INDIGESTION.

I have a good 1,250-pound work horse that began about three weeks ago to have scours once or twice a week. If I change his feed he is sure to have them, and often is real sick. I feed him one gallon of shelled corn and a little oats three times daily. He seems to be all right and works every day, and is in good condition.

Gradually stop feeding corn and put him onto a ration of oats and hay with a bran mash once or twice a week. Corn is not the best feed for him in summer. Allow free access to rock salt. Have his teeth attended to if whole oats are seen in his manure.

MAMMITIS.

I have a cow that has had six attacks of caked udder in the last two months. It yields to treatment very readily. I wash it with hot water and then apply a liniment of belladonna, two ounces; glycerine, one ounce; camphor, one ounce. Please give me a permanent cure.

Where mammitis (garget) comes and goes in this fashion, tuberculosis of the udder should always be suspected, hence we would advise you to have the cow tested with tuberculin. If she proves to have tuberculosis, have all of your cows tested and if the disease is present in your herd you should stamp it out and then have all heifer calves protected against the disease by the Von Behring method of inoculation.

SICK SOWS.

I have two sows one year old that have been sick for the past two weeks. They act a good deal like a pig with the "thumps." Feed has been principally corn with a feed of oats two or three times a week. They seem to want to eat, but they only take a few bites or few swallows of slop, and then thump worse than ever. Reminds me of a person with consumption.

It is quite possible that the sows have "consumption," for tuberculosis is getting to be quite common in hogs. Still it is more likely that they have some other lung or heart disease caused by worms or by heavy feeding and lack of exercise. Stuffing upon corn, as often stated here, is the most common cause of all of these weaknesses of breeding hogs. It would be best to kill the sickest sow, then make a post-mortem examination or, better still, have it made by a graduate veterinarian.

SORE SHOULDERS.

I have a dark gray seven-year-old horse. About a month ago while cultivating oats his right shoulder began to swell, making the horse very lame. I kept him in the stable and bathed the shoulders in warm water and liniment. The swelling went down and a lump formed between the legs. The lump is about the size of my fist; does not feel hard and is not tender. He does not appear to be sweened, as he is only lame when driven or hitched up. Any information in regard to treatment will be appreciated.

A badly fitting collar did the damage as far as soreness of shoulders is concerned and it may be that horse is also affected with sweeney. A prolonged rest will be necessary or allow a run at pasture. Wet sores on shoulder twice daily with a solution of one ounce of sugar of lead and six drams of sulphate of zinc in a pint of water; or paint twice daily with a mixture of two ounces of tincture of iodine and six ounces of extract of witch hazel.

BULLNOSE.

I have lost all of two litters of pigs, and a third about to die with a disease that begins when they get about two weeks old. I pulled or broke off the tusks as has been advised in these columns and in a few days I saw one had a broad nose. I examined him and under his upper lip was all sore and the flesh rotten and loose from the upper jaw bone right above where the black teeth are. Is this disease contagious? And is there a remedy?

The cutting off of small sharp teeth in new born pigs' mouths is an excellent preventive measure where canker of the mouth has been prevalent but it will not cure the disease known as "bullnose" or "snuffles" evidently present in our correspondent's herd. This disease is a form of rickets and incurable in a majority of cases where the pigs are weak in constitution and thriftless. Scrape the ulcers and sores and paint them twice daily with tincture of iodine at first and less often if they seem to respond nicely which is the case in some instances when due to a vegetable parasite but seldom if ever the case in true "bullnose." Authorities advise killing the pigs for the latter

disease. It certainly necessitates a change in the herd boar and brood sows and feeding of a more complete ration, free use of limewater and better sanitary conditions in the care of pigs.

KNUCKLING.

I have a colt that was born last night that is "cock-ankled" in both hind legs. What can I do for it?

Foals often are born in this condition yet recover fully as they grow. Simply hand rub the cords thoroughly twice a day; then put on flannel bandages. If this does not avail, then we would advise putting on slippery elm bark splints to be kept in place by bandages. In some cases we have used light plaster of Paris casts to good advantage.

FOUNDER.

One of my mares that I was working took sick suddenly about three weeks ago. She was all right at night, but when I went to the barn the next morning she could hardly stand up. She would stand with all four feet out as if bracing herself. Would hardly walk at all. It seemed to be soreness in her shoulders at first and then in a few days it seemed to be in her kidneys. She now can walk, but staggers as if about to fall. She is fat and eats well. She has had ground corn, timothy hay and grass. She has a habit of pulling back and I thought she might have strained herself. Sometimes she can't get up without help when lying down.

Mare may have been foundered by overfeeding and idleness. It would be best to thin her down by spare rations and exercise. A run on grass would be best. If she still is lame in front clip hair from coronets (hoof heads) and blister repeatedly with cerate of cantharides. Rheumatism would of course cause similar symptoms but founder would seem most likely under conditions described.

SICK MARE.

I have a mare that I started to work when her colt was two weeks old. The third day she got sick. I gave her two doses of liniment and she seemed all right. I let her rest a couple of days and then worked her another and she got sick again; then I called the doctor. I gave the medicine he prescribed for a week; then worked her half a day for a week and then a day, and she had the same spell again. I have not tried working her since and would like to have you advise me what to do. The doctor says the food don't digest, but does not tell me what to feed her.

You have neglected to tell us what symptoms were shown by mare when sick but we fancy you mean that she had colic and is affected with chronic indigestion. Give her a pint and a half of raw linseed oil at one dose, and repeat if she has another attack. If in pain from colic give her with the oil an ounce of turpentine and half an ounce of fluid extract of cannabis indica. Allow free access to rock salt. Better have her teeth attended to by a veterinary dentist.

CROOKED COLT.

(1) I have a yearling colt that walks on the frog of his front feet; the frogs seem to have grown down and the toes turn up like sled runners. Do you think I could have him shod or brace his feet some way to straighten them up? I did not notice anything wrong about him until he was three or four months old. (2) I have an old mare that is covered with lice. Is there a way of getting rid of them without taking the hair off? (3) I have an eighteen-year-old mare that I would like to breed, but she seems to be in season all the time, and part of the time there is a bloody stuff comes from her. She has been that way for a couple of years. Is there anything that could be done with her?

(1) We consider the condition incurable but a veterinarian on the spot might come to a different conclusion. (2) Better clip her at once although by much work with a 1-50 solution of coal-tar dip and free admixture of sulphur it should be possible to get rid of the lice. (3) She should be spayed. The condition indicates not only leucorrhea but chronic disease of the ovaries which is doubtless incurable.

LAMENESS.

(1) I wrote you about three years ago about a mare which was lame, apparently in the coffin joint, caused by getting her foot caught in a wagon wheel and pulling back. Then you advised "unnerving" her. I took her to a veterinarian to have this operation performed and he said that it would cause the hoof to slough off. Another veterinarian was of your opinion. Nothing was done, and the mare is still lame. Before taking any risk in the matter, I decided to write you again. (2) I have a mare that is lame in her left hip. This hip is not as full on top as her other hip. Do not know how long she has been this way, as have only had her three months.

(1) Veterinarian can inject cocaine or eucaïne solution to numb the nerves running to foot and in this way tell with certainty whether foot is true seat of lameness. He also would be best judge as to wisdom of unnerving, which in all probability would have to be done below fetlock joint in which case there would be no danger of hoof sloughing off. It is quite possible that repeated blistering of the coronet may remove lameness if it happens to be due to

side bone, but unnerving will be necessary for ringbone or navicular disease. (2) Have veterinarian locate true seat of lameness, as muscles of hip often waste away when cause of lameness is lower down.

BARREN MARE.

I have a mare that raised a colt three years ago, but which I cannot get with foal again, although I have had her bred several times when she appeared to be in season.

We would advise you to give her an injection of yeast mixture once a week and again when seen to be in season, and have her bred when about out of season. If she does not conceive use an impregnating syringe or capsule next time she is bred.

LAMENESS.

I have a seven-year-old mare that is lame in her right hind ankle. When first taken from the barn in the morning, she is very lame, but gradually improves with exercise until the lameness cannot be noticed only when she trots. It cracks when she walks, and there is a small puff on the outside of her leg, a little above the ankle.

We are not at all certain from your description, that fetlock joint is the true seat of this lameness. It may be in hock joint. If in fetlock a high ringbone would be the most probable cause and would necessitate firing and blistering by a graduate veterinarian.

PROLAPSE OF VAGINA.

I have a sow one year old that has an inverted uterus. She went about six weeks after boar service, and then lost her pigs. I have cleaned the uterus off and put it in place, but it will not stay there.

The vagina or passage to the womb is everted and after cleansing and returning to place may be caused to remain there by taking several stitches through skin on each side of vagina so that the strings cross the passage and prevent parts coming out. Afterward keep parts clean with a 2 per cent solution of coal tar disinfectant and remove stitches in a week.

LUMP-JAW.

I have a three-year-old heifer that has the lump jaw. Can you give me a remedy?

As often stated here lump jaw may be cured by giving dram doses of iodine of potash in water twice daily until animal has scurfy skin, slobbers and loses appetite at which stage treatment should be discontinued for some days but repeated when the symptoms of "iodism" disappear. Three periods of treatment may be necessary for a cure. Locally the tumor should be treated by opening and inserting some arsenic or corrosive sublimate powder wrapped in wet cotton; or, if possible, tumor should be cut out.

SICK SOW.

I have a Duroc sow which raised a litter of nine pigs. She was two years old and weighed about 375 pounds. When the pigs were five weeks old I had to wean them, as the sow quit eating altogether. Since weaning the pigs, she eats better, but does not seem to gain. She walks "hump-backed" and when she raises herself up braces herself with her nose. She weighs about 260 pounds now.

Purge her with four ounces of epsom salts in warm water as a drench. Then give her powdered nux vomica twice daily in increasing doses, commencing with ten grains as first dose. She should be fed milk, middlings and tankage and have free range on grass and clover. Rub joints or affected muscles once daily with a strong liniment.

PIG-EATING SOWS—RINGING HOGS.

(1) What condition is the cause of sows eating their pigs? And what is the remedy? (2) Is it a good practice, from the standpoint of profit and health of hog, to "ring" or "snout" them to prevent rooting?

(1) Pampered, inbred, sluggish, lazy, costive sows lacking some needed ingredient of a balanced ration or made vicious by lack of exercise and the train of evils attending it are the ones that most usually eat their pigs. Such sows should not again be bred. Many feed salt pork to prevent the trouble, but natural management of sows is a better plan and especially the allowing of free range and avoidance of much corn as a ration. (2) If hogs are given sufficient range on pasture affording an abundance of feed at all times and they are also provided with charcoal, wood ashes, lime and salt they will not be so apt to root, but most breeders prefer to use the rings than run chances of having ditches dug in the fields.

BLIND TEAT.

Just before her first calving one of my two-year-old Short-horn heifers had one hind teat swell to be very large. I rubbed it well, but when fresh could not get milk out of it. I tried to make a vent, but to no effect. She has been fresh about six days. I milk part and let the calf suck, and try this teat every time, but no use. The swelling has now gone and it seems normal.

At time of calving an opening might have been made through closed teat duct,

GOMBAULT'S CAUSTIC BALSAM

A safe, speedy and positive cure for

Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.

Lump Jaw

The first remedy to cure Lump Jaw was

Fleming's Lump Jaw Cure

and it remains today the standard treatment, with years of success back of it, known to be a cure and guaranteed to cure. Don't experiment with substitutes or imitations. Use it, no matter how old or bad the case or what else you may have tried—your money back if Fleming's Lump Jaw Cure ever fails. Our fair plan of selling, together with exhaustive information on Lump Jaw and its treatment, is given in Fleming's Vest-Pocket

Veterinary Adviser. Most complete veterinary book ever printed to be given away. Durable bound, indexed and illustrated. Write us for a free copy.

but this would be dangerous at that time and even more dangerous now. Such conditions are best treated when cow is dry. If you decide to run chances and you are sure that milk comes down into the teat at milking time, open the duct by inserting a clean knitting needle or large darning needle or clean milking tube and afterwards insert a dilator or teat plug. Udder should be bathed with hot water twice daily to keep down infection, and if any inflammation follows operation give cow a physic of epsom salts and rub udder with belladonna ointment after fomenting.

POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

CHICKS DEAD IN THE SHELL.

We have been trying several years to ascertain the cause of chicks dying in the shell. We have solved some of the problems, but we feel yet that there is some subtle force at work to cause trouble that we have not yet been able to locate. The Reliable Poultry Journal gives the following causes of this trouble:

"There are a great variety of causes which result in chicks dead in the shell, many of them having nothing whatever to do with the method of incubation. You will always get a certain percentage of chicks dead in the shell whether you hatch in an incubator or under hens, and in the long run the percentage is about the same in either case where ordinary skill is used in the operation of the machine. We believe you will find a well ventilated cellar a much better place for operating your machine than the room adjoining your sitting room. We do not think the number of dead chicks in the shell was excessive considering the season of the year. In many cases the trouble is due to poorly proportioned yolk food, owing to the breeding stock not having a sufficiently well-balanced ration, or because the breeding birds were out of condition. Chilling or overheating the eggs while saving them for hatching is also a common cause. Eggs for hatching should be kept at a temperature of not lower than 40 nor higher than 50 degrees while they are being saved, and the less they are handled the better. If the eggs are kept too long before setting them the chicks are likely to die in the shell from the fact that the germ has been weakened. Anything that will cause weakening of the germ is liable to result in chicks dead in the shell. In some cases rough handling of eggs during the first stages of incubation may be responsible for this trouble."

WATERGLASS AS A PRESERVATIVE.

"Please give the system of waterglass preserving through your columns."
Wisner, Neb. C. H. M.

Waterglass is conceded to be the best method of preserving eggs. This product is to be found in almost every drug store nowadays, since there has been so much inquiry about it. It is a soda silicate or a liquid solution which forms a glassy surface on eggs, hence it is given the name waterglass. The commercial product is not expensive and should be diluted. To one part of waterglass nine parts of water should be added. This solution should be placed in an earthen jar in which the fresh eggs have been previously placed. They should be weighted down so none of the eggs will float above the preservative.

We have a number of letters from persons who have tried this method and all report it successful. A subscriber from Kentucky reports a successful experiment with this product. He processed forty dozens of eggs last September, using waterglass diluted with nine parts water. He was consuming some of them March 21st and pronounces them excellent. He states that the eggs should be carefully "candled" before putting them in the liquid. It may be added to his statement that one cannot buy eggs from all sources and succeed. Eggs from hens that are in good condition, and which are fresh when preserved, will prove more satisfactory. Eggs from hens not with males will keep twice as long as eggs containing the germs of chicks.

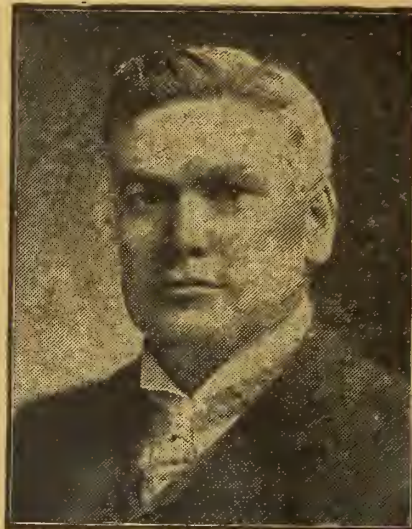

ECZEMA.

We are having a disease in our poultry yard that is giving us some trouble. We have about 600 Barred Rocks that roost in different places in the night, but all range together in the day time. One bunch of 200 is afflicted with some sort of a breaking out on the head and neck, similar to boils, exuding a slimy substance. The disease spreads slowly, but surely. Have treated a few of them with lard and kerosene with poor results.

Van Horne, Iowa.

This trouble is evidently eczema which is caused by food that is too stimulat-

Dr. Williams Cured My Catarrh

T. F. WILLIAMS, M. D.,
CONSULTING PHYSICIAN.

"Pacific Jct., Iowa, March 17, '06.
Dr. T. F. Williams,
Des Moines, Iowa.

Dear Sir:—I write you to let you know I am feeling fine. My ears are much better and I feel better in every way. I will not need any more medicines now.

I have found your medicines to be all right. I have had faith in you ever since I began using the treatment. I feel it my duty to recommend your treatment to other people. Your Inhaler is just the finest thing I have ever used.

If these few lines will help some catarrh sufferer I will be glad. May God bless you and your medicines always. Yours truly,

Ernest Barker."

"Bachelor, Mo., May 6, 1906.
Dr. T. F. Williams,
Des Moines, Iowa.

Kind Doctor:—I have been taking your treatment since the 22d day of April. I think it is fine. I have not the words to express the good I have derived from it. If I continue to improve as I have in the past I will not need any more treatment. But if I should need any more I will gladly send for it. I certainly will praise you for the good you have done me. You are certainly a fine doctor.

Yours very truly,
Mrs. F. B. English."

Understand, however, that unless entirely up to expectations, don't keep it, but send it back at our expense, and we will refund you the \$10.98 plus the freight charges. Address, The Glazier Harness Co., Ft. Madison, Ia. Reference, Germania-American Bank, Ft. Madison.

ing. It is not contagious. The remedy consists in giving two grains of calomel every other night and a one-grain pill of citrate of iron and quinin twice a day for two weeks. An ointment of oleate of zinc applied to the surface will help. Give simple foods such as grass, with cut bone twice per week. Sometimes the birds will get well with no other treatment than a removal of the cause. Don't feed too high.

WITH THE EDITOR.

Once upon a time it chanced that I found myself mistress of a furnished house, the owners of which I had never seen and knew nothing of. Without being of an inquisitive nature I had a not unnatural curiosity about the unknown persons whose dwelling I was occupying. I began to look about me, to put this and that together and draw conclusions. Gradually, to my own satisfaction at least, I tabulated the tastes and characteristics of the Unknown. At the last I could almost have sketched them, so complete a self-revelation did I find in their house and its contents.

At the very first I decided that the unknown owners were persons of some means, of quiet, substantial tastes and of a hospitable nature. That much was evident as one mounted the broad stone steps of the piazza. The dark red brick house was large and solid, and its fine porch, with chairs, big and little, rocking and stationary, were an invitation to restful companionship.

The threshold crossed, the general, the special features of the house, each had its own message. Entering the reception hall one noticed that while one part of the house was all open to the gaze of the chance caller the other was carefully shielded from observation. Neither door nor curtain screened the living room or dining room. Privacy while dining was provided for by a large folding screen. Evidently the Unknown were persons with social tastes, persons cognizant of modern ideas with regard to connecting rooms and open spaces, persons who expected to entertain and to make their home something of a social center. Evidently they also believed that the inner workings of the household were their own business and no concern of the world. Between the dining room and kitchen on one side was a pantry with heavy swinging doors, while between reception hall and kitchen was a closet guarded by close-fitting doors at each side. The life of the kitchen was effectually isolated. The contrast between the frank revelation on the one side and the studied reticence on the other was very marked. However cordial might be the promiscuous hospitality of the Unknown their intimate friendship would be for the few, I fancied.

The treatment of odd spaces in this house threw a flood of light upon the characteristics of the owners. Not an inch of space was wasted anywhere. A corner of the hall passageway was utilized as a lavatory; a foot or two on the other side between two partitions made a place for brooms, brushes and dusters. A jog in a wall gave space for a cupboard above and a flour bin below; the top of the latter fitted with a marble slab furnished a stationary baking board within reach of supplies and oven. Upstairs vacant spaces were utilized with similar ingenuity. In the hall space left over from an unlighted closet made a nook for bedding and linen. In the bath room the space in the wall behind the mirror, fitted with shelves, made a medicine cabinet. If these people were in comfortable circumstances, one guessed it resulted from making the most of every opportunity.

The conveniences in this house—the built-in cupboard of the butler's pantry, with its glassed shelves for china, and its drawers for silver and linen; the well-lighted, commodious closets with their hooks and hangers; the kitchen pantry with its refrigerator which could be iced from the porch; the well-ordered basement with its root and fruit cellars, its stationary tubs and arrangements for heating water; all these, not to mention the numerous labor-saving devices found in the kitchen—made a positive impression upon me. They suggested people who believed in having comforts, who aimed at having as good a time as possible while passing through this vale of tears.

One did not need to look far to discover that the Unknown had interests above mere things. One was hardly across the threshold before seeing that they must be book lovers. There were books everywhere, up stairs as well as down, and a well-stocked magazine stand besides.

Knowing people's friends we know something of them. It was quite wonderful how much I came to know about

How and Where to Buy a Washer.

The market is flooded with poor washing machines, free offers, premiums, etc. That is not the cheapest way to get a thoroughly reliable washer. Most of them are expensive and provoking in the long run. Get a guaranteed washer, made by the reliable manufacturer. That's what we want to say to you about the

O. K. WASHER.

It's the easiest washer to operate, the simplest to understand. Our guarantee is backed inside of every machine. The O. K. Washer will handle your biggest washing and do it so much better that you cannot afford not to have one. A beautiful machine, too, painted in maroon and fitted with gilded hoops. No warping because the lumber is Louisiana Red Cypress. The lid is steam proof.

SEND US YOUR NAME TODAY.

Also the name and address of your dealer. We'll tell you where and how to get the O. K. washer, and full particulars. Address the factory.

WASH ON THE LINE LONG BEFORE 9:00

FRUIT GROWING

The rich irrigated lands of the Arkansas, Grand, North Fork and Uncompahgre Valleys of Colorado, and the Farmington District of New Mexico, offer exceptional opportunities for the fruit grower. Pears, Peaches, Apples, Grapes, Apricots, Plums, Melons of all kinds and small fruit of every variety are raised with a greater average yield per acre—and a finer quality—than in any other section of the United States. Markets are close at hand and the demand exceeds the supply.

The Denver & Rio Grande R. R.

"Scenic Line of the World"

reaches all the above districts and offers special inducements to those seeking locations. Write to-day for free descriptive booklets.

S. K. HOOPER, GENERAL PASSENGER AND TICKET AGENT, Denver, Colo.

the Unknown. Before half an hour I had discovered the probable profession of the man of the house. Near a desk and typewriter table stood a book case filled entirely with books devoted to biology, apparently the working library of a man, the necessities of whose profession called for acquaintance with and continual reference to authorities on this subject.

Roaming from shelf to shelf I gathered that the Unknown were interested in religion and were probably Episcopalians. If not, how account for Paley's "Evidences" and Baxter's "Saints' Rest," for Dean Stanley's "Life and Letters," Robertson's "Sermons," Kipp's "Double Witness" and numerous volumes of similar character? That they were interested in this world and the life of other nations was evidenced by volumes from the "Story of the Nations," sets of Green, Macaulay, Prescott, Motley, Parkman, and others. Of poetry I judged they were not great lovers, although ancient poetry was represented by Homer, medieval by Dante and modern by Rossetti and Mrs. Browning. That general literature came in for a share of attention there was abundant evidence. And also that someone enjoyed novels and kept in touch with modern fiction. Many of the novels that everyone reads were on the shelves; with them were a good many others which a busy woman like me knows of only by hearsay and through book reviews. The presence of some of these latter was, or might be, significant. To own "Les Miserables," "The Newcombs," or "Ebb Tide" tells nothing; they are classics which it is the correct thing to buy. "The Woman Who Did" belongs to another class.

Rugs whose colors are a symphony, furniture of good line and finish, pictures which suggest love of fine architecture, and the best in art, have a profound significance when found in the home of persons of moderate means. I felt quite satisfied in my own mind that the Unknown were not only intellectual, but cultured; that they were persons of refined taste, art judgment, lovers of the beautiful.

Until the experience above related I had not realized that one's house is, in a way, a mirror reflecting one's character, tastes and pursuits. Since, I have often wondered that more people do not think about it so. A little incident which occurred recently suggests the importance of the matter.

A friend of mine accepted an invitation to call upon a family, some of

An All-the-Year-Round Country.

If you wish a profitable location in a climate pleasant the year through, where you can make every day count on the farm, where you can find the best farm bargains, where crops yield abundantly, markets are good and all conditions combine to give greater profits per acre than in any other section of country and absolutely the best returns for money and labor, select a new home district in the South, in the territory of the Southern Railway and Mobile & Ohio Railroad. For general and special information address nearest office.

whose members she had met at a social gathering and rather liked. She called, prepared to like them better on better acquaintance, but on being shown into the parlor all desire for further acquaintance died an instant death. "Why," said she, on her return, "the carpet fairly screamed, its colors were so loud. The wall paper was little better, the curtains were pretentious, imitation affairs, and the pictures ugly things in wretched taste. Everything was so common I was shocked. I wanted to get away at once. Nothing would tempt me to go back, and I'm afraid I don't want them to come here, although I had to invite them. You will be shocked, of course, but I feel I don't want to know people who have such abominable taste."

HOME AND HOME MAKING.

LITTLE HELPS BY THE WAY.

For darkness passes; storms shall not abide;
A little patience, and the fog is past.
After the sorrow of the ebbing tide,
The singing floods return in joy at last.

The night is long and pain weighs heavily,
But God will hold his world above despair.
Looking to the east, where up the lurid sky
The morning climbs! The day shall yet be fair.

—Celia Thaxter.

Life is hard enough, and sad enough, at the best for many, many souls. Let us try to give them as much happiness as we can. Speak the pleasant, the appreciative word in time; where it will do the most good. This subject has been touched on before in these columns, but every day shows the necessity for remembering it. Our stay here is so short and there is so much one may do to help others if we will only open our eyes and see it. "Pass on the praise," husbands and wives, parents and children, friends and neighbors, and so add your quota toward making the world better and happier.

FOR A SUNSTROKE.

The person who is insensible from sun-

stroke should not be carried far, as time is valuable. Put him in a shady place and unfasten bands around neck and waist. Strip clothing off the upper part of body and throw water over him. If ice is obtainable, crack it, wrap it in cotton and put it on the head, spine and under arms. If not, use wet cloths, changing frequently. Fanning quickly helps. As soon as he begins to revive and can swallow, give whisky and water. Of course a doctor should be sent for, but he should not be waited for, as it would probably be too late. Wet leaves or a wet handkerchief in the hat are said to prevent sunstroke.

HOW TO THREAD NEEDLES.

When threading a needle in a dim light if the thread is white, hold it against a dark background; if dark, hold it against a light background. When threading a sewing machine by artificial light one's eye is sometimes dazzled by the reflection from the metallic plate. This can be remedied by covering the plate temporarily with a piece of dark cloth.

A SMILE.

Another Advertisement.—The Artificial Nature Company. All the discomforts of camping out without leaving town. Wood ticks and red ants always in stock. Green vegetables thoroughly wilted and on short notice. Condensed milk, with ptomaines developed while you wait. We guarantee to make you as tired as a two-weeks' vacation, and at half the expense.—Puck.

MUSIC OF THE FARM.

O sisters, do you ever think about the pleasant sound?
That, no matter how they're listened for, ain't never heard in town?
The rustling of the corn blades gently waving to and fro,
And the flapping of the tassels when the soft gulf breezes blow,
Now, just you stop one minute, while you listen to the trees
And the warbling of the wild birds, the droning of the bees,
And the gurgling of the brooklet, rippling onward to the sea,
And the lowing of the cattle, grazing homeward o'er the lea.
Then, at twilight comes the singing of the merry katydid,
And the shrill note of the cricket 'mong the shrubs securely hid.
Oh, there's music, music, music, not a sound to cause alarm,
And we feel so glad and thankful when we're living on the farm.
—Effie J. Monts.

PUFFS.

Make a paste with one pound of self-rising flour, a pinch of salt and one-fourth pound of butter; add two well beaten eggs and half a pint of milk. Mix well together; roll the pastry out thin; cut into rounds and line well-greased patty pans with them. Fill with raspberries which have been stewed to a jam with plenty of sugar, and bake for fifteen minutes. Serve cold, with a spoonful of whipped cream on top of each.

QUICK DESSERTS.

Every housekeeper knows the value of an attractive dessert that may be produced quickly upon occasion, when for some reason time presses or the unexpected guest gives a new face to the situation. We can always fall back upon fruit if fine fruit is available, but with many the conscience is not clear as to the whole duty of woman without a made dessert of some kind. Here are a few more, then, of the impromptu class that may be added to the list in the family cook book:

Emergency Pudding.—To be baked while the soup and roast are eaten. Cut thin slices of bread in two-inch squares and arrange in a buttered dish with layers of raisins or figs cut in quarters between; beat two eggs and stir with half a cupful of sugar into a pint of milk and pour over the bread; bake in a quick oven.

A Cherry Cream.—Arrange on a round platter lady fingers in the form of a star; whip a pint of cream and heap in the middle; dot the top with maraschino cherries, pouring the cordial over the lady fingers. Handsome, dainty and satisfying.

WITH THE JULY FRUIT.

Sweet Cherries To Can.—To stoned cherries (enough to fill a quart can) add two-thirds of a teaspoonful of sugar and two-thirds teaspoonful of rhubarb juice; cut the rhubarb into inch lengths and bake in a covered dish, and strain through double cheese cloth. When the cherries are tender by boiling, fill cans and seal.

Sweet Cherries Pickled.—To every quart of whole cherries allow a teaspoonful of vinegar, half a teaspoonful of sugar, a dozen cloves, and half a dozen blades of mace; boil the sugar and spices five minutes; add the vinegar, and when cold pour over the cherries packed in quart cans, and seal. Are ready for use in twelve hours, or will keep indefinitely.

Cherry Conserve.—To every pound of sour stoned cherries use a pound of sugar. Be careful to save all the juice. Put them into a deep dish and strew over half the sugar.

Cut off that cough with
Jayne's Expectorant
and prevent pneumonia,
bronchitis and consumption.
The world's Standard Throat and Lung
Medicine for 75 years.
Get it of your druggist and keep it always ready in the house.

Now let lie two hours; then put in a preserving kettle; add the remainder of the sugar, and cook until soft, and the sirup clear. Skim if froth rises. Put in pint cans and seal.

Raspberry Jelly.—Choose berries which are not quite ripe; cook till soft, adding very little water; strain through a jelly bag and allow one pound of sugar to each pint of juice; put the juice on the stove; heat the sugar in the oven while the juice is boiling, stirring it frequently from the bottom. When the juice has boiled twenty minutes, during which time it has been repeatedly skimmed, drop in the hot sugar and stir constantly. Let it just come to a boil and put at once into the jelly glasses. To prevent breaking the glasses some housekeepers place them on a folded towel wet with cold water, while pouring in the hot jelly. When perfectly cold cover with melted paraffin, which will harden quickly; then tie over brown paper to keep out dust, unless you have covers for your glasses.

AMONG OURSELVES.

As men do not honor us by their company in great numbers, when one does rise to his feet the president makes it a point to give him the privilege of the floor at once. Mr. J. B. Young comes in response to the questions propounded by Mrs. McKelvie:

As I have a desire to help Mrs. McKelvie, and men are invited, I would knock for admittance. I do not know that I can answer any of her questions to her satisfaction or all of them to my own, but some of them I think I can. About men thinking they will go to heaven because their wife is a Christian, I don't believe they really think so, but have to have some excuse. I think a great many of the faults of men are due to their training, and as most men have been trained by some woman, who is to blame? If there was not so many Johnny Don'ts and Tommy Don'ts there would be more John Do's and Tom Do's. We all know how it is when a boy gets ambitious and full of life, how he is snubbed when he runs into the house with muddy feet, and on stormy days he is scolded for making a noise, until he comes to feel that he is not wanted around in the way. And then he is hurried off to the kindergarten as soon as possible and there gets acquainted with other boys in the same circumstances and they plan to spend their spare time together, playing marbles, fishing, etc., with their parents' permission at first and their knowledge of where they are. Mother feels relieved that they are out of the way, but there comes a time when the boy does not always ask permission or tell where he is going, and as he does not seem to be missed much, he spends his evenings down town if he lives in town or at the general store at the "corners" if in the country. Thus he keeps drifting on into things that take his leisure time until he belongs to clubs and lodges enough to demand most of his earnings and some of his nights, and don't you think it is hard for him to break away from these things later, especially so if he is nagged at home for doing things that are not just to the liking of the women folks? Don't you think it would pay better to sympathize with the boy and bear with him than to push him out into this cold world to find enjoyment and to satisfy his ambitions to be everlastingly busy at something? I am not pleading for myself, as I happen to be an exception to the rule, thanks to a mother that made a confidant of her boy. I am now 1,100 miles from that mother, and have a wife and two boys and four girls of my own, so you see that I am not an "old back," nor am I tied to mother's apron strings, and I have found that it does not hurt a boy's manhood to be his mother's friend. Now, I think that women are in the best position to better the conditions that Mrs. McK. complains of, and if she has a boy that she would like to be a model husband for some Christian girl, let her reason with him about this very question. Let us repeat that a mother's influence goes a long way toward the making of the man. Here is a question to discuss, should any desire to do so: "Which is the happier home, that with or without children?"

There is sound wisdom in what Mr. Young says. If there were more faithful competent mothers in one generation, there would be an increase in the number of good husbands and fathers in the next. There is no gainsaying that. I wonder if there is not a connection between unsatisfactory husbands and the question which M. L. N. comes to ask:

You invite us to write, so I thought I would write just a few words. The question is, "Ought a girl eighteen years old to marry?" I say no, but how many are there who say yes. I believe that a girl ought to have a girlhood and enjoy it, but if she marries when eighteen years old she has no girlhood—she passes right from childhood into womanhood. Mothers, why don't you teach your girls that marriage is not all play? Why are there so many divorces? Because the children (I don't believe that

we can call them grown-up people) don't know what they are doing. After they are married a couple of years they find out they made a mistake in marrying so early. Now, I don't say all who marry young make a mistake, but most of them do. And don't think I am an old grandma, because I am not; I am just a mere child yet. But, mothers, speak to your girls and try to make them understand what married life is, and let them try for themselves and see if they really do love the boy they think of marrying. If they find out they don't, well, it is better that the break come before they are married than after they have been married a couple of years.

The question of early marriage is important. It has also more than the side suggested by M. L. N. Let us have the other, and further discussion of the whole subject. I wish some man, taking courage from Mr. Young, would give us his views on the subject. It is when social questions are settled not by men alone nor by women alone, but by men and women together, that they will be satisfactorily answered. "Chariton" drops in for a little chat and behind her stands Mrs. Polly:

I agree most emphatically with Mrs. Lo-water about borrowing. It is seldom necessary if one manages properly. If you borrow your household supplies, if you are honest, you send home a little more than you got, and that counts up in the course of time. And if a farmer borrows tools it is not right to borrow without paying for their use and that would not be borrowing. One farmer of my acquaintance has tools of all kinds. He has loaned them until some are nearly worn out and I don't suppose the borrowers think any more of him than if it had been the other way. I think, too, we might change the routine a little by writing of the outdoor beauties, but perhaps we could not write so readily. Out-of-doors is beautiful to me at all times. Even when the trees and ground are bare I can see beauties in sky and the distant hills. I often wish I could have the views I have from my back door in a picture. I prefer a farm life. If one wants to work he can find as much one place as another, and there is no necessity for country children being ignorant or awkward.

I would like to say to Mrs. C. M. H.: By all means buy hats for your little girls. It saves so much bard washing and ironing, and washing is the hardest work I have to do, and the work I dread the most. During the hot, sultry weather last year I wore a man's fifteen-cent straw hat, fastened on with a hat pin. I'll never make another sunbonnet, though they do keep off tan and sunburn. My husband often said to me, "I don't see how you can stand that hot bonnet. Take it off and wear a sunhat." One could buy the ten and fifteen-cent boys' and men's straw hats and trim them quite prettily with a little fresh ribbon and fasten with lawn or ribbon strings. Let us try to save ourselves all the drudgery we can. I am a believer in good honest work, too, for work is the world's salvation, but too often I know we get our hands on the muck rake and keep them there, too busy to see how beautiful the world can look sometimes, and too busy to talk to a neighbor who chances in of an afternoon.

For next week's meeting there are some good things in store—some very good things. It is so warm now that

the wise woman gets her work pretty well out of the way in the early morning, or puts it off until the cool of the day. So there is time for visiting Among Ourselves between times. Let us make our summer meetings especially good and so gather heart of courage for duties which are apt to be irksome when the thermometer is hovering near 100.

Dressmaking and Millinery—No. 524.

Sylvia Silverthorne, Muscatine, Iowa.

[All inquiries and remittances for patterns described in these articles should be addressed to Sylvia Silverthorne, Muscatine, Iowa, and not to the office of this paper nor the editor of the Home Department.]

A successor to the suspender waist is seen in the skeleton waist that is having considerable vogue just now, and these are so simple and easily made that one needs only a description to enable her to construct one for herself, without the aid of a pattern, or even a picture. One needs a plain waist or a pattern for such, and most of us have the latter. It may be a shirt waist, preferably one that closes at the back, but either will do. The "skeletonizing" process consists in cutting away portions of the garment, and this may be done almost at will. At the neck it may be cut out in square, round or pointed outline, and to any desired depth, so that the cutting terminates a little above the waistline or belt. A "slice" in any of these shapes may be cut out between the top of sleeve and the neck

There's a big difference between the Howe Scales and the other kind.

HOWE SCALES

hang absolutely free, and cannot bind. That's one reason why they're so accurate. Compound beam, steel frame, and adjustable steel rock scales are too important an investment to experiment. Get the old reliable, standard—the Howe ball bearing scales. Write today for scale information.

HOWE SCALE CO. OF ILLINOIS
92 Lake Street, Chicago, Illinois.

edge. Starting a little forward of the shoulder seam the arm-hole may be cut out to such a size as suits the fancy. The back may be similarly treated. Then all the edges must be given such a finish as pleases the individual fancy. It may be simply stitching, or a narrow edging of lace or embroidery, or even of braid may be applied to all the edges. This skeleton waist is to match the skirt with which it is worn, and is itself worn over one of the lingerie or fancy white waists that is certain now to be found in all our stocks.

round length if the slight train is not desired. For any variation in length other than this, one must add to or take from the length of the pattern for herself, as the patterns are already put up, and I cannot make any alterations, but as this change may be made at the bottom it is not a difficult matter. The garment may be made up with the half low neck and the elbow sleeves as shown in the large design, or the yoke and sleeve-extensions may be used. The closing is made at the back, but a front closing is easily effected if one prefers it. I would do only half justice to the princess design if I did not call your attention to its use as a house gown pattern, for many use it for this purpose alone, and it makes up charmingly. It may even be shirred across the back, only when used for a wrapper pattern, or the shirring may be omitted altogether and a

belt be worn if the fulness is to be confined. Pattern No. 5376 is cut in sizes for a 32, 34, 36, 38 and 40-inch bust measure. One may easily alter to a larger size if desired. There is a lining that may be used or omitted. A very pretty design for a house jacket to be made of the dainty summer goods now being sold for a song is the one pictured in No. 5265. The fulness at the waistline is adjusted by means of tucks, but shirrings or a belt only may confine the fulness. Collar and sleeves are in novel design, and are pictured elaborately made, but simpler modes may be used. Pattern No. 5265 is cut in sizes for 32, 34, 36, 38 and 40-inch bust measure. Send eleven cents in money (not stamps) for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

[5376—Seven Gored Shirred Princess Gown, 32 to 40 bust.]

As the garment thus cut out may be slipped on over the head it is not necessary that any provision be made for closing at either front or back, and this is to be taken into consideration in using a pattern in either mode of closing.

Among the various modes of the princess gown those in the shirred form continue to find especial favor, possibly because these are especially adapted to the thin materials of the season, as well as because of their easier management by the amateur. They

[5265—House Jacket, 32 to 40 bust.]

do not require the "perfect fit" that must necessarily characterize the smooth-fitting forms. One of the most charming designs for the shirred princess is illustrated in No. 5376, which is a seven-gored model, the waist and skirt being in one, exactly as are the waist and skirt in the fitted princess. The pattern is perforated for taking off at

THE INTERNATIONAL SUNDAY-SCHOOL LESSON

Third Quarter. Lesson III. Luke X, 25-37. July 15, 1906.

The Good Samaritan.

Another pearl in the lovely and priceless strand of our Lord's thirty-three parables, one of unusual size, weight, and luster, claims our attention.

It is hard for us Occidentals to appreciate the license taken by Oriental audiences in the midst of public discourse. They express their approval or dissent not only by facial and manual gesture, but by audible word. Discussions spring up among the auditors, and the speaker often has a running accompaniment of comment. So it was no novel thing that in the midst of Jesus' discourse the voice of a teacher of Jewish law rang out, "Rabbi, what shall I do to inherit eternal life?"

It was a mere dialectic gauntlet tossed at Jesus' feet. The schoolman would fain convert that Perea roadway into an arena where he could display his hardihood and skill with his logical lance. He should at least be given the benefit of a doubt of having any special animosity against Jesus. Sacred things to him had lost their sacredness. Law and prophets were only an armory for wit and subtlety.

The Master takes him upon his own ground. "Thou art versed in the law. Mayhap you have an answer in the textbook of your own phylactery?" The lawyer's response is quick and apposite. As in a flash one sees how superior the religion of the old covenant was to the current religion of Judaism. They had ceased to be identical. The religion of God was love, but the religion of Pharisaism was a narrow and cold system of dialectics.

The lawyer, conscious of his inability to keep the law in its full breadth, would fain enter his Pharisaical refinement upon it in the question, "Who is my neighbor?" Jesus had driven the matter home to his heart, but he will dextrously fend it off with his dialectic. Jesus finds the pledge of eternal life in the subjective state; this religious dodger begs to know the objective status of those toward whom he is to exercise himself. If they are Jews and friends he will love them. More than that the paraphrases, tag-rums and what-nots of Pharisaism do not require of him.

At this point the wideness and purity of the love which God instills in the penitent and trustful soul is flashed out in one of the most incomparable parables that ever dropped, even from the lips of Him who spake as never man did.

The site of the story was notable, not to say notorious; the personae, a wounded traveler, a priest, a Levite, a Samaritan. The priest and Levite show us "how not to do it." They palliate and excuse themselves. The sufferer may not be a Jew; if so, the law, as they interpret it, makes no demand upon them. Even if a Jew, he might die while they were binding up his wounds; and if he did, they would be ceremonially polluted and disqualified from temple service. Ah! how they had failed to learn that, if God could not have both mercy and the ceremony of sacrifice, he would choose mercy always.

The Samaritan does not stop to parley; he just neighbors the unfortunate man, and that is the end of it. He does it heartily and thoroughly. That naked and ensanguined form makes its own plea to him, and makes it not in vain as to the others. He opens both heart and pocketbook. The commercial trav-

eler is transformed into the trained nurse as he sits the night watches through by the sufferer's side. Only when he reached the boundary of another duty did he leave him. Even then he projected his aid into the future by the deposit he made, and the pledge he left.

Again, and this time beyond appeal, Jesus casts the matter back into the heart of his interlocutor, where it belonged, saying: "Who neighbored the unfortunate man?" To this, of course, there could be but one answer: "He who, rid of all racial prejudice and all selfishness, loved his fellow, and that, too, in none of the sentimentalism which etherealized in sighs and tears and flourish of lavender-scented cambric, but materialized in wine, oil and pence, a saddle and a couch."

Any Christianity which falls short in this test is unworthy of the name of Him who said, "Do thou likewise."

Analysis and Key.

1. A pearl of a parable. Greatest in the strand in some respects.
2. Circumstances under which spoken. Freedom of Oriental audiences.
3. A question interjected. Only a dialectic gauntlet.
4. Jesus' skill. Takes man on his own ground. Has him answer his own question. Decline of practical religion revealed. Love vs. Dialectics.
5. Dialectical refinement upon "neighbor" attempted.
6. Jesus responds with the incomparable parable. Term neighbor not defined. Subjective state which makes a man neighbor to everyone illustrated.
7. Terse application. "Do thou likewise!"

The Teacher's Lantern.

To this day a public speaker in the East needs to be ready at repartee. He is target for questions and, if he cannot answer or foil them, he instantly loses prestige with his auditors. A missionary in the streets of Bombay was getting on famously with his hearers until a pundit passing called out contemptuously: "The man who invented illuminating gas did more for the world than your Jesus!" The missionary retorted: "When that man comes to die he will send for a gas fitter, I suppose." The speaker more than regained his audience.

The lawyer saw an opportunity to air his erudition—to tempt this influential rabbi into the mazes of cunning dialectics and subtle casuistry, in which he hoped to snare him, and thus elevate himself in public esteem.

Do to inherit: The question is based on the false notion that eternal life is of works. There is no consciousness of human inability and guilt. The lawyer would not have known what that means—

"Lay your deadly doing down,
All down at Jesus' feet."

But the lawyer finds the way of legality as hard and forbidding as Bunyan's pilgrim. He hedges right away. He can love his neighbor, if he is allowed to define the term neighbor.

Jesus does not himself define the term neighbor; but by an example, irresistible in its charm, He shows that subjective state of heart which makes a man neighbor to all his fellows.

Divine religion has its mark in that it is epitomized with extraordinary facility. The scribes heaped up great casuistical

From Drudgery to Positions of Dignity

Many young men are drudging their lives out at hard manual labor who could qualify for positions of dignity and good salary if they would only investigate the opportunities a good business education affords.

YOUNG MEN WANTED

The demand is far in excess of the supply of the right men—men who have the right business training such as we give every student who enrolls with the Gem City Business College. We don't qualify you by teaching you to memorize text books—we qualify you by giving you actual, practical business experience—transacting business just as it is done in regular commercial life. Our college is simply a big instructive mercantile establishment, where you learn by doing. That's why our students are sought by leading business houses. They are ready for business—fully qualified. We teach all commercial branches—Bookkeeping, Banking, Shorthand, Rapid Calculations, Penmanship, etc. Write today for our free 64-page illustrated catalog and terms. Now is the time to enroll. Good home, boarding places—reasonable rates. **GEM CITY BUSINESS COLLEGE**
D. L. Musselman, Pres.
205 Musselman Bldg.
Quincy, Illinois

burdens for men's backs. Their prohibitions and positive precepts were fairly bewildering and interminable. But Jesus sweeps them all aside, puts instead of them one word—love.

And by chance there came down a certain priest that way—better by concurrence. A better definition could not be given; not, indeed, of providence, which is a heathen abstraction for which the Bible has no equivalent, but for the concrete reality of God's providing. He provides through a concurrence of circumstances, all in themselves natural and in the succession of ordinary causation (and this distinguishes it from the miracle), but the concurring of which is directed and overruled by him. And this helps us to put aside those coarse tests of the reality of prayer and of the direct rule of God which men some time propose. Such stately ships ride not in such shallow waters. Luke x. (Ederheim II, 238.)

LIMB WASTED WITH ECZEMA.

Suffered Untold Agonies—Doctor Said It Was the Worst Case—Wonderful Cure by Cuticura.

"I used the Cuticura Remedies for eczema. The doctor said it was the worst case he ever saw. It was on both limbs, from the knees to the ankles. We tried everything the doctors knew of, but the Cuticura Remedies did the most good. I was obliged to lie with my limbs higher than my head, for the pain was so terrible I could not walk. I suffered untold agonies. One limb wasted away a great deal smaller than the other, there was so much discharge from it. I found the Cuticura Remedies very soothing, and I still keep them in the house. I am very thankful to say that I am cured. I found the Cuticura Remedies all that you say they are. I hope that you may be spared many years to make the Cuticura Remedies for the benefit of persons suffering from the torture of skin diseases such as I had. Mrs. Golding, Box 8, Ayr, Ontario, Canada, June 6, 1905."

FISHING AND CAMPING.

Tickets are on sale daily to Madison Lake, Waterville and Elysian, Minn., via the Chicago Great Western at rate of one fare and one-third for the round trip. Full information from E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

OUR SHEEP DEPARTMENT

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep to this office.

FITTING SHEEP FOR THE SHOW RING.

On this subject Professor Curtiss, of the Iowa Experiment Station, says: "They should have good individual excellence or all else will fail. Whether the animals to be shown are lambs or older sheep the methods are the same. Lambs will begin eating grain at about a week or ten days, at which time they should have a creep and a feed trough to themselves in which they may have access to a grain ration in the most tempting form. For this purpose a ration consisting of equal parts of wheat, bran and oats, with a little oil meal added to it, will be found very satisfactory. The addition of rolled or cracked wheat and cracked corn later will improve the ration. In addition to the grain ration and the best quality of clover or alfalfa hay it is necessary to provide variety of green feed for the show sheep throughout the season in the most acceptable form. There is usually no trouble about a supply of green feed early in the season, while the clover crop is at its best. Following this a succession of peas, oats, rape, alfalfa, clover aftermath and cabbage should be provided. The kinds of green feed to be used will vary with the locality. The root crop is a most important adjunct. In the northern latitudes the rutabagas or Swede turnips are most acceptable of all root crops. In the Mississippi valley, however, this crop seldom does well south of a latitude of about 42 or 43 degrees. Mangels and turnips may be grown farther south, but they are not as satisfactory for feeding sheep. Kohlrabi and carrots furnish good feed, though they are not as easily grown. Alfalfa and cabbage are good substitutes and should be used freely. During the latter part of the season ground peas should be added to the grain ration, as they constitute an excellent feed for finishing sheep in show form with prime quality of flesh. Cracked wheat may also be used with excellent results. A ration consisting of equal parts of bran, oats, cracked wheat and ground peas will be found excellent for finishing show sheep. Oil meal may be used during the early part of the feeding period, but it should be used very sparingly if at all in the finish, as it has a tendency to make soft flesh. For show lambs, no single feed will promote growth and development as well as milk, and, like the oil meal, it may be used to best advantage during the early stages of the feeding. Toward the close the milk may be largely or wholly replaced by grain. During the summer months it is very important that show sheep should have cool, clean, well ventilated quarters. These quarters should be bedded with dry, clean straw and the sheep kept absolutely quiet and free from disturbance. They should have the run of a good-sized paddock morning and evening and may be left out in a grass lot at night until the show season approaches. Exercise is another essential to the sheep that are being fitted for the show ring."

Professor Curtiss gives the suggestions of a veteran showman and a skilled feeder, who can fathom the appetite of his animals, and one who can coax a dainty sheep to do its best. All exhibitors are nowadays expected to trim and color according to their fancies. Trimming and coloring do not influence judges, but spectators like to see them looking well. The judge handles each sheep and knows the contour of the body.

Iowa Climate and Crop Bulletin.

The following climate and crop bulletin is issued by the United States Department of Agriculture, Iowa Section, from the central station at Des Moines, Iowa, for the week ending July 9, 1906:

There was an average daily deficiency of 4 to 6 degrees in the temperature of the past week. The days were moderately warm, but the nights were cooler than usual in the first week of July. Except in a few localities the rainfall was below the normal, but there is an ample supply of moisture in the soil for the present needs of all crops. The cool nights and moderate warmth by day afforded excellent conditions for the growing crops of spring wheat, oats and barley, checking the spread of rust in the late seeded fields. And there was sufficient

Poland China Barrow. Age 18 months. Weight 1,035 pounds. Fed on Iowa Stock Food Bred and owned by Peter Flouw, Orange City, Iowa.

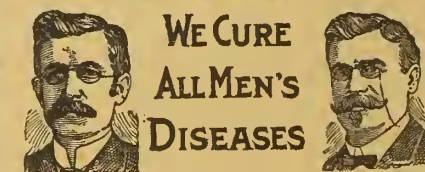

FREE To any person who has never fed Iowa Worm Powder we will send a \$1.00 package FREE on receipt of 20 cents in stamps for postage and packing. Address Dept. A.
IOWA STOCK FOOD CO., JEFFERSON, IOWA

Make More Money off Your Hogs

THAT'S what you want to do, and that's what you can do if you use Wright's Stock feeder. Any man who has a sow and litter of pigs can't afford to be without one of these feeders. It saves feed, and always keeps it in good condition; makes big, strong, thrifty pigs; develops the whole bunch evenly, and will pay for itself in one season. Used for sows, shelled corn, oats, barley, ground feed, etc.

HUNTER'S RIVETED STEEL CULVERT PIPE

STEEL CULVERT PIPE
OUR steel culverts are the marvel of the age and are rapidly replacing wood and clay culverts. Needs no repairing, stands heavier loads and does not settle out of line. Does not burst from freezing and does not wash out.

Any farmer can put them in with very little help. Shipped in any desired length and on short notice. Farmers everywhere are now ordering our riveted steel culvert pipe. Write us for prices. Address,
S. G. HUNTER IRON WORKS, ATLANTIC, IOWA.

warmth for the healthful growth of corn, which is now being laid by in very fine condition. In the southern districts the bulk of the crop has been laid by, and in all districts good progress has been made. Haying is well begun, and the quality of the crop this year is very good; the yield is generally below normal. Winter wheat, rye and early oats are being cut in the southern section, and the yield is fair to good. All minor crops are doing well.

Following is a summary of the July 1st estimates received from correspondents of the Iowa Weather and Crop Service: Corn, 99 per cent; wheat, 94; oats, 84, rye, 93; barley, 91; flax, 92; potatoes, 94; hay, 75; pastures, 83; apples, 70; grapes, 85.

HOMESEKERS' EXCURSIONS.

CHICAGO GREAT WESTERN RAILWAY.
On the first and third Tuesdays of each month until November the Chicago Great Western Railway will sell homeseekers' tickets to points in Arkansas, Indian Territory, western Louisiana, Mexico, New Mexico, Oklahoma Territory and Texas at rate of one fare plus two dollars for the round trip, except that a maximum rate of \$23.00 from Des Moines will be in effect to above territory with the exception of Mexico. Stopovers will be allowed in both directions. Limit thirty days, stopovers both ways.

On the first and third Tuesdays of each

month until November the Chicago Great Western Railway will sell homeseekers' tickets to points in Arizona, Kansas, Missouri, Nebraska, Nevada, Utah, Wyoming, Alabama, Florida, Georgia, Kentucky, eastern Louisiana, Mississippi, North Carolina, Tennessee and Virginia at rate of one fare plus two dollars for round trip. These have limit of twenty-one days to return and allow stopovers on going trip.

On the first and third Tuesdays of each month until November, homeseekers' tickets will be on sale to Denver, Colorado Springs, Pueblo, at rate of \$23.00 from Des Moines and to Ogden and Salt Lake City at rate of \$29.50. Other Colorado points in proportion, all having limit of twenty-one days to return and allowing stopovers on going trip.

To points in Idaho, Montana and Washington homeseekers' tickets on sale the first and third Tuesdays of May, June, September, October and November at rate of one fare plus two dollars for the round trip, tickets having limit of twenty-one days to return.

To points in Minnesota, North Dakota, Manitoba, Saskatchewan and other Canadian provinces, homeseekers' tickets are on sale each Tuesday this year. Have limit of twenty-one days and allow stopovers west of St. Paul.

Full information can be obtained from E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

....LANDS AND HOMES FOR SALE....

FARM LANDS FOR SALE.

THE CHEAPEST AND THE BEST ON THE MARKET.
1 ILLINOIS lands are in southern Minnesota and South Dakota; in Yellow Medicine county, Minnesota, and Deuel county, South Dakota, in the fourth tier of counties north of Iowa. You can raise anything in these parts that you can raise in northern Iowa. A good corn and stock country. These lands lie well, good black soil. Failures unknown in these parts. Lands for one half the price that you can buy Iowa lands for. Improved farms from \$30 to \$40 per acre, wild lands from \$20 to \$30. Why go to North Dakota and Canada and pay practically the same for those lands that you would pay us? Buy your round trip tickets to Gary, South Dakota, over the C. & N. W. Ry., take receipt, bring the same to us, we will refund your fare on any purchase. Excursions every Tuesday. For full particulars write, **GEORGE W. JOHNSON LANDS COMPANY,** State Bank, Gary, South Dakota.

Three hundred acres to be cut up in town lots; the remainder of tract will be sold in eight acre lots for the sum of six hundred dollars each.

The Entire Stock Has Been Sold.

J. W. EVERMAN & COMPANY,
 GALLATIN, - - - MISSOURI.

You Can Raise Big Crops in the Southwest

The light shaded portions represent very fertile sections in the Southwest.

It is the rule—not the exception—for the farmer in the Southwest to raise 30 bushels of wheat to the acre; 60 bushels of corn; 90 bushels of oats, and 5 tons (3 cuttings) of alfalfa. Such a thing as a crop failure is almost unknown. With big yields, sure crops and uniformly better prices for all he raises, the Southwestern farmer is exceptionally prosperous. When you consider that these big results are produced from land that costs only a small part of what land cost in your locality, you will get some idea of the opportunities open to you in the Southwest.

Now is Your Opportunity!

You can sell your present farm—pay off the mortgage and have enough left to buy a big farm in the Southwest that will make you independent in a few short years.

The "Coming Country" Free!

The "Coming Country" is a very interesting paper published monthly and devoted to the Southwest. It will post you on conditions in the Southwest better than anything that you could read. I'll be glad to have the publisher place your name on the mailing list and send you a free copy of the paper regularly for one year. Write now to

S. G. LANGSTON, Sec'y., M. K. & T. Land Bureau, 306 Wainwright Bldg., St. Louis, Mo.

WE BUILD YOU A HOUSE FREE OF CHARGE

and sell you fertile land at a low price and on easy terms, within 25 miles of St. Paul and Minneapolis. This is the greatest proposition ever made to readers of this paper. You have your choice of 40 acres or more out of two million acres of the splendid lands of Northwestern Wisconsin. **The price is only \$7. to \$12. an acre,** and to give you a good start we will build your house on the land. The finest climate in the world, pure soft water, ample rainfall, fuel for years on your own land, near to the finest markets. This with a FREE HOUSE and land that will grow the FINEST KIND OF CROPS. What more can you ask! Write TO-DAY for MAPS and FULL INFORMATION.

Treatment For Plant Lice.

To the Editor of The Homestead:
Many inquiries and complaints have been heard this season concerning a small green insect which comes in droves and literally sucks the life out of the leaves of some trees, principally plums. This insect is the plant louse or aphid. It is present every year, but seldom in sufficient numbers to do any damage. The reason that it is usually harmless is that it has two natural enemies, the lady bug and the lace wing, which keep the numbers so low that little harm results from its attacks. This year these insects are not able to cope with it and in many cases it will be necessary to use some artificial means.

Two spraying mixtures are advocated for this pest, kerosene emulsion and tobacco infusion. The formulas follow:
FOR KEROSENE EMULSION.
Kerosene2 gallons
Rainwater1 gallon
Soap½ pound
Cut the soap fine and put in the rainwater. Boil until the soap has dissolved. While still hot pour into the kerosene and churn briskly for five minutes. An old dash churn is excellent for this purpose. The mixing and the churning should be done at a safe distance from the fire. Before using, dilute with from six to nine parts water.

FOR TOBACCO INFUSION.
Tobacco waste or stems.....1 pound
Boiling water1 gallon

Add hot water to tobacco and let stand until cool. Strain and add one pound whale oil soap or two pounds of soft soap to each fifty gallons. The tobacco stems or waste can usually be obtained at any cigar factory.
For spraying on a small scale the tobacco infusion is more satisfactory, but for a large orchard it is best to use the kerosene emulsion. The tobacco infusion is harder to make on a large scale, but very easily prepared for limited use. The kerosene emulsion, as it is made in concentrated form, is well adapted to orchard use on a large scale. It is also more economical. With careful use both seem equally effective.

Polk Co., Iowa. Franklin Brown.

Echoes From a Kansas Farm

By Henry Hatch

The more enthusiastic believe that even the lightning bugs will be using denatured alcohol, after the law goes into effect.

Anyway, if half of what has been said about the manufacture of denatured alcohol is true, it will furnish a better market for several different farm products. Every little helps.

It takes not only the man with the hoe, but the man with a scythe, the man with an old mowing machine, and the man with an unswerving determination, to keep ahead of the weeds this weather.

Last year one of our friends bought a farm that has been in renters' hands for the last twenty years. He has been hauling out manure all the time he has had to spare since moving on, and still has a lot around the yards. The renters had dumped it away from the barn and yards with a scraper, leaving it in piles where it would not be in the way.

Commercial fertilizers have been having a great run in this locality, partly because of the supposed profit from their use and partly because there are live agents to push the sales. On farms where there is manure rotting in piles, it is poor policy to buy fertilizer by the sackful. There is no fertilizer that

does the land as much good as well kept manure from a cow yard.

Several years ago, while we were living in Nebraska, self binders did not do as good work in getting all the grain as they do now, especially when grain was short. One of our neighbors who had a binder that was none too good was surprised when a dealer offered him a new hay rake for the scatterings he could get by going over all his grain fields with it that season. The rake was taken out and the dealer got more than the regular price for it. There's a moral to this.

One of our neighbors, though milking but five cows, has bought a new cream separator, and says that what is saved in butter fat and work will pay for the machine within the year. There are not many machines that will pay for themselves in a year, yet there are thousands of folks who keep on milking cows and using and washing about twenty pans daily.

We have observed just this much about fall seeding; that you stand the best chance on early plowed land. Even wheat is better where the ground was plowed the earliest, and it is almost absolutely necessary to plow early for alfalfa or blue grass. We never yet have seen a stand of alfalfa or blue grass that stood the winter, when the ground was plowed just before seeding. It must be packed—lying light and loose won't do.

The more we see of crab grass the more we think that Ingalls did not mean to include it when he said something about grass being the forgiveness of nature. The man who has it in his corn field until it is almost like pulling two tons to plow it up with a cultivator thinks it is nature's curse. There are some who talk as if they believed a growth of crab grass in a corn field was a help, as it would hold moisture. It will hold moisture when moisture in the field is not needed, after the crop is matured, but when it is growing it takes moisture. No crop can grow without using moisture.

Going through tall corn with one horse hitched to a small cultivator is not the kind of work it might be, either on horse or man. A whole lot more people talk of doing it than really do it, we have observed, and we believe they have raised just as much corn by just talking of doing it than they would by actually doing it, too. We have tried it and were unable to see a particle of difference at husking time. Of course this is not saying it would prove this way every time.

The people are divided on the justice of making such a furore over sanitary conditions in the packing houses. A good many believe that the larger packing houses are cleaner and more sanitary than the smaller, local slaughter houses. We believe so, too. With every regard for our president for what he has done in the past, we believe he has been misinformed in the packing house investigation business, and is following up a wrong track. If he is not, we will be glad that he has started what he has.

The twine trust has been taking a mean advantage of the state twine plants. They have been putting out a twine that dealers sell under the name of "Pen" twine. Farmers who buy it think they are getting twine made at the state penitentiary plant, as it sells for less than the trust price. It is of miserable poor quality, and everyone is disgusted with it, and they say they want no more penitentiary-made twine. Local dealers put themselves in a bad light by carrying out such a scheme.

FIELD NOTES.

A cracking good Poland China boar, one of the large, big-boned type, is offered for sale by Mr. W. W. Wheeler, of Harlan, Iowa. This boar was bred by Mr. Peter Mouw, and comes from the largest strain

of the breed. Write Mr. Wheeler if you want him.

Messrs. Manley & Co., of Lyons, Neb., have about ten Orion boars for sale. As the old hog is dead this will be one of the last chances to buy an Orion boar. Write them.

Mr. L. D. A. Snyder, secretary, Combination Sale Company, Manchester, Iowa, names the dates of December 4th and February 19th as those on which to hold public sales of thoroughbred hogs and cattle.

The breeders of Kossuth county have announced a combination sale of Aberdeen Angus, Short-horns, Red Polls and Hereford cattle, Duroc Jersey and Poland China hogs to take place during the week of the Kossuth County Fair at Algona, Iowa, September 14th.

Mr. Wyatt Carr, breeder of, and dealer in, registered Angora goats, of Collins, Iowa, in his advertisement on page 14 of this issue, states that he has 500 wethers and 500 does and kids for sale. He writes: "We are selling all kinds of goats from our advertisement in The Homestead."

Mr. Sutter's crop of spring pigs are coming along nicely and have made a rapid growth. The large, growthy Duroc with plenty of royal blood and strong individual merit is the type that Mr. Wm. Sutter, of Liberty, Neb., is raising. Look up his advertisement on page 24 and write for his prices, etc.

Mr. Geo. Kerr, of Sabetha, Kan., was very fortunate this spring in getting a big crop of pigs. Mr. Kerr has about 200 head of spring pigs and we will say that they are the best lot the owner has raised for some time. Mr. Kerr will be in line to fill the demand, as he has the blood lines as well as having the individuality. The Kerr herd has a wide reputation for putting out the good ones.

Mr. W. R. Bennethum, breeder of Duroc Jersey swine, of Madrid, Iowa, calls our attention to the fact that there has been a mistake made in the announcement of his sale, as it has been stated that it would occur on February 26th. The correct date is February 6th, as per our date claim column. He writes that he has seventy extra good pigs the get of Keep On, Advancer, Hanley, and Malcom's Model 2d.

Mr. J. T. Judge, breeder of Short-horn cattle and Poland China swine, of Carroll, Iowa, writes: "I am offering for sale my aged herd boar, Perfection's Prince 93075, by Old Chief Perfection 2d 42559 and out of Go Sick's Choice 21696, and litter brother to Perfection E. H. 9521, which stood first at Des Moines in 1905. I regret very much to part with this hog, but I am compelled to do so, as I have used him two years." Mr. Judge's advertisement appears on page 23.

Mr. John J. Schmal, of Sutton, Neb., writes that the Poland Chinas are coming along nicely. He has selected a few spring pigs that will be fitted for the Nebraska State Fair. Mr. Schmal owns one of the best sons of the great breeding boar, Nemo L's Dude. This yearling is developing into a hog of the sire's type and will probably do his share in keeping up the grand old hog's reputation as a sire and show hog. Mr. Schmal has some very fine spring pigs and can supply you with a very choice boar. Look up his advertisement on page 22 and write for his prices.

Mr. John Lydon, of Belden, Neb., comes forth this season with about 200 Duroc Jersey pigs sired by his two herd boars, Orion's Corrector and Capadura, and by Gold Dust Jim 2d and Critic I Am. There isn't a breeder in the northern part of the state that is better or more favorably known than Mr. Lydon, and he has a herd that will always bear inspection. In fact, he has a class of sows in his herd that are away above the average and they are all giving a good account of themselves this year. Mr. Lydon will have some good hogs to sell this fall, and will be pleased to hear from any of our readers.

Mr. M. Mihills, of Norfolk, Neb., has a Duroc Jersey herd that he can well feel proud of. At the head of the herd is Jack Orion, sired by Orion and out of a Dandelion sow, and he is a boar that must be reckoned with this fall. If he goes into the show ring this fall, and he undoubtedly will, he will make the other fellows' hogs go some to beat him. He is assisted by Belle Echo Prince, a son of Belle Echo by Echo King, and by Dan Orion, a full brother to Jack Orion. He has a number of daughters and granddaughters of Jack Orion in the herd. Mr. Mihills will make a public sale October 20th, at which time he will sell the cream of his herd.

No spot on earth is developing so rapidly as the Snake River Valley of Idaho. Irrigation has done wonders for this section, just how much no man can tell until he has seen the country. Twin Falls is the garden spot of the Snake river country. The largest irrigation works in the world are located at this point. This system waters 250,000 acres of the richest land on earth. There is no such thing as a crop failure on this land. It can be bought cheap now, but the prices are rapidly advancing. If you think of owning irrigated land you can get full information regarding this magnificent country by writing to S. T. Hamilton & Co., 305 Perrine Bldg., Twin Falls, Idaho.

Mr. R. M. Skillen, of Greene, Iowa, has purchased of Mr. A. A. Rogers, of Inwood, Iowa, through The Homestead, the yearling Scotch hulk recently offered for sale through these columns. He is a son of Craven Archer, the bull that formerly headed the Rogers herd, and he in turn is a son of the noted Imp. Fearless Archer. Mr. Skillen writes as follows under date of June 15th: "The bull came this morning and is strictly all right. He weighed 1,080 pounds after leading him six miles. I am more than pleased with the calf and am glad there are breeders honest enough that we can do business with them by mail order." The bull referred to above will head the good young herd of Mr. Skillen. He has a number of excellent cows, among which is the imported cow, Augusta 101st, and she now has an excellent calf at foot by Imp. Fashion Favorite. Mr. Skillen paid \$395 for this cow in the Geo. Thurman sale, and he was also the runner up on the \$500 bull sold by

Natural asphalt makes the ready roofing that lasts for years—Genasco.

Ask your dealer, or write us for samples and Book N.

THE BARBER ASPHALT, PAVING COMPANY

Largest producers of asphalt in the world.

New York PHILADELPHIA Chicago

Mr. Pratt in the same sale. His herd is not large, but what he has are of the very best, and it won't be many years until Mr. Skillen has one of the good Short-horn herds in the state.

Don't buy a farm until you have read the advertisement of Mr. W. H. Slaughter, of Kansas City, Mo., which appears on page 15. He has valuable information for you relative to Missouri, Kansas and Texas lands. When writing mention this paper.

Messrs. J. A. Russell & Co., of Kansas City, Mo., offer for sale \$50 acres close to Lacygne, Kan. Their advertisement appears on page 15. It will pay you to write to them for full particulars relative to the property, and when writing mention this paper.

Messrs. McNeil Bros., of Bowen, Ill., have decided to hold their horse sale on September 26th instead of October 29th as formerly claimed in these columns. Readers of this paper who wish to secure standard bred or draft horses will find it to their interest to be present at Bowen, Ill., on September 26th. Plan to attend this sale. Write for catalogs, kindly mentioning this paper.

The Western Farm Land & Realty Co., of Kansas City, Mo., offer for sale a fine 160-acre farm south of Kansas City at a very low price. They also have one in southern Minnesota which they will sell at a bargain. The above-named firm handles Texas lands. It will pay you to write to them relative to free excursion. Read their advertisement on page 15 and when writing mention this paper.

Mr. J. L. Barber, of Harlan, Iowa, the well-known Chester White breeder, is strictly in it this season with 150 spring pigs, besides thirty head of fall boars and sows. Possibly the best lot of pigs he has ever raised will be offered the trade this season. His spring pigs are sired by the two state fair prize-winning boars, Jerry S., and Captain, while the fall stuff is sired by Advance 2d, a son of the prize-winning boar, Monarch Jr. Mr. Barber will be at the fair this fall with a splendid show herd, and will have a good two-year-old boar called Ole Oleson which he expects to get inside the money. He will also take along his noted brood sow, Miss Hanna, as well as a lot of young stuff. He can furnish fall boars or sows to those who want them or he can fill orders for spring pigs at any time. Write him your wants and he will be able to fill any order you may send him from a spring pig to matured brood sows.

Messrs. Burress, Billiter & Burress, of Carroll, Neb., have a splendid lot of imported Percheron and Belgian horses on hand that will weigh around a ton, and among the lot are some that will make warm competition at the fairs this fall. The above firm have done a good business this spring and have recently shipped a horse to North Dakota and another to Messrs. Peck Bros., Cherokee, Iowa. The latter firm purchased one of their 2,000-pound horses, and bought of the above firm after visiting nearly all of the other importing firms. They are now making some special summer prices on these stallions, and they will be pleased to hear from anyone wanting a good horse. The horses now quartered in the barns of the above firm are an especially good lot. They are all blacks, and have the bone, size and quality that every horseman is now looking for. It will pay anyone to go and see their horses. They certainly have the goods to offer and their prices are right.

Mr. W. N. Booth, of Danbury, Iowa, owner of the well-known Will Rose herd of Poland Chinas, writes: "My pigs are coming along fine and seem to get better all the time. My present crop of pigs are sired by Keep On Jr. 92381 by Keep On, and Uneeda Thicket 91939 by Thicket, the famous Ohio boar. There are four very promising fall boars out of Perfect Rosa 25219 sired by Uneeda Thicket. They are very growthy, of good length and well made all over and will weigh close to 300 pounds, just in growing condition. Perfect Rosa is raising a very promising litter of eight out of ten farrowed by Keep On Jr. Another promising boar is a June yearling out of Peerless Queen 252908 by Thicket. He is the making of a large and good hog. I sold his litter brother to my neighbor last fall and he sired him eighty-five splendid pigs, and he then put him in the feed lot and when sold brought \$3.70 more than he paid for him. Peerless Queen's spring litter has three fine boars out of a litter of eleven by Standard Tecumseh. Some other good prospects are found in Diamond's (234630) fall litter of ten by Thicket. They are nice, smooth, even fellows, and there are five of these. Her spring litter is by Keep On Jr. and they are very choice and promising. Diamond's spring litter of 1905 sold well, four pigs selling for \$140. The others remain in the herd. Rose Royal 205920 has two good fall boars by Thicket. Three other good boars by Thicket are out of Kitty Whiteside, a sow I sold last winter. She weighed 615 pounds, just in fair condition. Queen of Wild Rose 2d 248728, a very choice sow and good breeder, has some very promising pigs by Keep On Jr. Rose Perfection 200836, another old standby, has four splendid boars by Keep On Jr. These pigs have an abundance of range, are grow-

ing nicely and will make good, useful hogs. I have fifty good, promising boars for the season's trade, and they will be priced so that anyone needing a good boar can afford to buy them. Can furnish a good boar at any time from a June yearling down to a weanling."

One of the well-known Duroc Jersey breeders in northern Nebraska is Mr. John Black, of Randolph. With ninety spring pigs bred by such boars as Junior Jim, Young John, Critic's Wonder and Liberty Boy, he will be in position to fill orders for the most exacting customer. At the head of the herd at the present time is Critic's Wonder, a son of Glendale Critic, and he is of a decided show type, as well as an excellent breeder. Had he just a little more size he would be a likely proposition this fall. However, he is an excellent breeder and Mr. Black can show the best pigs he has ever raised by this boar. He has some extra good Orion sows in the herd. One of these, called Ethel Y., has a nice litter by Young John, and another called Lady of Mt. Pleasant has seven lusty pigs by the first-prize state fair boar, Junior Jim. Mr. Black will make a public sale on October 17th, at which time he will put in the tops of this season's crop of pigs.

Mr. W. F. Smith, late of the firm of Messrs. Grassmeyer & Smith, of Kearney, Neb., on May 1st purchased Mr. Grassmeyer's half interest in the firm, and he will now continue to do a general real estate business under the firm name of the W. F. Smith Realty Company, and will be pleased to have any of our readers interested in real estate in central Nebraska call on him at any time. He writes that he has the largest list of cheap Nebraska lands found anywhere in the state, and that he can sell any of his central Nebraska farms in Buffalo, Custer and Dawson counties at from \$15 to \$60. His western Nebraska lands, located in Keith, Lincoln and Perkins counties, will be sold at \$3 to \$12 per acre. He can locate any reader of this paper who wants a farm, ranch, or residence in Kearney, Neb., a city of 9,000 inhabitants. Write for his large new price list just out, addressing the W. F. Smith Realty Company, National Bank Bldg., Kearney, Neb. His advertisement appears on page 15.

Mr. O. M. Healy, of Bedford, Iowa, in asking The Iowa Homestead to claim October 26th as a date on which to hold a sale of Short-horn cattle, at South Omaha, Neb., writes: "I will make a sale in South Omaha, October 26th, of about fifty head of straight Bates Short-horns. Nearly one-half of my offering will be of the celebrated Durbess tribe. I will include in this sale about twenty head of the get of 'Old' Airdrie Duke of Hazelhurst 117346, noted as a sire in Messrs. Elbert & Fall's herd and sold in their dispersion sale to Messrs. C. C. Bigler & Sons. He was the sire of many noted animals, including the \$3,040 Bates cow, Wild Eyes 61st, which topped the sale by over \$500 in Messrs. Bigler's \$90,000 sale four years ago. This will be the best opportunity to buy as many in one sale of the get of this bull, as he is gone, having died in his thirteenth year. He was a very short-legged bull and possessed a wonderful constitution; was never known to miss a feed until about ten days before he died. It is my intention, if good cattle with choice Bates breeding will do it, to make this one of the best offerings of straight Bates cattle in recent years."

Mr. Geo. H. Lawshe, of Harlan, Iowa, comes forth this season with about 100 head of Chester Whites, including a lot of fall sows and boars. Mr. Lawshe is one of the well-known breeders of Shelby county, and has been a familiar figure at the state fair as well as at several of the best county fairs in the western part of the state. The boars used in the herd and the sires of the stuff on the farm are Monarch Jr. 13301 (winner of first and sweepstakes at Harlan and Avoca fairs, and fifth at Des Moines), Captain 14119 (winner of first in yearling class at Iowa State Fair in 1904, first at Minnesota State Fair, first and sweepstakes at Interstate Fair, Sioux City, Iowa, and first in yearling class and reserve champion at St. Louis; this boar is owned jointly by Mr. J. L. Barber, Harlan, Iowa, and Mr. Lawshe), Jerry S. 13167 (the second prize eighteen months boar at Des Moines, 1905, and sire of the first and third prize boar at same show). Some of Mr. Lawshe's fall boars are sired by Advance 2d, a son of his old herd boar, Monarch Jr. He has an excellent lot of spring pigs and some good fall boars and sows. He will be at the state fair, where he hopes to meet all his friends, and

will have a good string of Chester Whites with him. His advertisement will appear in due time in these columns, but if any of our readers want a boar pig or a few sows in the meantime they can get them by writing to the above-named breeder. He will be pleased to bear from any of the boys.

Messrs. M. W. Greer & Son, of Rushville, Ill., breeders of Duroc Jerseys, have decided to hold their forthcoming sale at Busnell, Ill., on account of the superior railroad advantages of that city. Breeders will kindly keep this sale in mind, as it will offer an unexcelled opportunity to secure good breeding stock from one of the best herds east of the Mississippi river. In the meantime if in need of an extra good herd boar look up the advertisement on page 24 of this issue and kindly mention this paper when writing.

The well-known firm of Messrs. Wm. Uhe & Son, of South Omaha, Neb., have a nice crop of seventy-five pigs sired by their two splendid boars, Ohio Sunshine 2d and Fancy Perfection. This is one of the oldest Poland China firms in the West, and we will also add, one of the best. They have kept in the front of the procession and have always had the leading strains in their herd. They have a most excellent lot of brood sows and have retained only those which farrow large litters, and must be good individuals. It is from these that they have secured their present crop of pigs. They have a nice lot of fall boars and some excellent spring pigs. One of the best spring boars is sired by Fancy Perfection and is out of Black Beauty 2d, one of their best brood sows. Anyone wanting a pig that will develop into a big hog had better order this fellow at once. Messrs. Uhe have an excellent fall boar also that will do someone a lot of good. Their advertisement will be found in The Homestead in due time. Anyone, however, who is looking for a good Sunshine or Perfection boar had better order one at once. Please mention this paper when writing.

We desire to call our readers' attention to the Duroc Jersey advertisement of Messrs. M. S. Moats & Son, Randolph, Neb., on page 24 of this week's issue. This firm is well known to Homestead readers, and we are pleased to say that they have one of the very best herds in northeast Nebraska. They are firm believers in good stock of all kinds, and not only have an excellent herd of Duroc Jersey hogs, but they also have some splendid Percheron horses. They can show you a crop of 103 spring pigs this season, and they would be a credit to any herd. They also have seventeen fall boars on hand and these they will sell any time. These are sired by Duroc Challenger's Wonder, Crimson Critic and Chime's Advance, three boars used in the herd, and they also have pigs by Liberty Boy, Critic's Echo and old Orion. Crimson Critic is a son of the prize-winning boar, Glendale Critic, and they will show him at the state fair this fall. He is a good boar, with lots of stretch to him, and he should make a creditable showing. They also have three full sisters to him, and some of these will also be taken along. They have eight good spring pigs by Orion out of a sow purchased at the sale of Messrs. Manley & Co. last winter and a spanking good litter by Critic's Echo out of a Malcom's Model sow. Profit's Pride, a daughter of the well-known sow, Daisy Profit, farrowed a litter of fourteen by Chime's Advance, and she is saving seven, while Challenger's Lady, a daughter of old Duroc Challenger, has seven good pigs by Liberty Boy. The Messrs. Moats will be at the fair with a good show herd this fall and they will make a fall sale on October 16th. They now have a number of fall boars for sale, and will be pleased to bear from anyone wanting one.

MONEY TO LOAN ON FARMS.

On page 15 of this issue will be found the advertisement of Mr. De Forest Bowman, of this city, who has money to loan on farm lands. Mr. Bowman is well known to this paper and we know that any of our readers who may wish to make a loan with him will be treated fairly. He is in a position to make any size loans and at a very low rate of interest. It is his desire to get agents in the field and he will give very good inducements to any reliable parties who may wish to act as his agents. Write him for any further information you may desire.

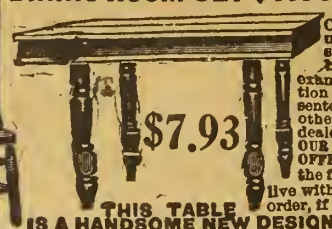

CHAS. VAN PATTEN'S DUROCS.

The well-known herd owned by Mr. Chas. Van Patten, of Sutton, Neb., is coming along nicely. The pigs are very thrifty as well as being of royal blood. Red Reuben was formerly used in the herd and several of his get are showing up nicely. Some of the choicest of the herd is a lot of fall sows and boars. These have grown very well and are strong individually. Mr. Van Patten will probably have part of these at the Nebraska State Fair. The spring pigs are showing the effect of good care. If you want a good spring pig or fall animal write this gentleman and he will give you living prices. Mention this paper.

PRAIRIE GLEN DUROCS ARE FINE.

A representative of this paper recently visited at the farm of Mr. A. L. Mossman, Radcliffe, Iowa, and was given a very pleasant surprise. Mr. Mossman took a little time from his work, for he is a very busy man just now, erecting a fine new barn for his stock, in which he takes great pride, and gave the writer an opportunity to gaze upon his crop of Durocs. It has been our pleasure to see many excellent herds of red swine, but thus far none have outclassed those raised at the Prairie Glenn Farm. An especially fine litter from Queen Beatrice was seen. This is the individual that Mr. Mossman secured at the R. J. Harding sale last spring. If Ohio Chief could see these youngsters and speak, he would have nothing but words of praise in store for them. Numerous inquiries have been made in regard to this litter, and to the lucky purchasers who secure one from this bunch it will indeed be a rare find. Mr. Mossman has something like 100 youngsters coming on in nice shape, sired by the following boars: Tlentsin, Al's Chief and J. Wonder. For nicely developed shoulders and hams, also strong backs and good bone, the Prairie Glenn herd is not excelled. Uniformity of color is no-

SIX CHAIRS ONE TABLE DINING ROOM SET \$7.93

THIS TABLE IS A HANDSOME NEW DESIGN FOR 1906. Made of the best selected and thoroughly seasoned ash, finished in antique oak. Size of top, 48x48 inches. The legs are iron bolted. ticed at once. Mr. Mossman will have his advertisement in this paper soon, and is ready to book orders now for delivery at a later date.

OWN A FARM IN KANSAS OR TEXAS.

Messrs. T. Carrabine & Co., of Kansas City, Mo., will sell you a good farm in Kansas or Texas at from \$6 to \$10 per acre. This is no misleading statement. The above-named firm will be glad to show you the land, and you may see for yourself the opportunities they offer to homeseekers who want to own a farm of their own. When writing, don't fail to mention this paper.

WHEATLEY & WARD'S ANGUS BULLS.

Messrs. Wheatley & Ward, of King City, Mo., breeders of Aberdeen Angus cattle, are offering a number of bulls of good, strong ages that should be in service now. They are by the grand bulls that head the Wheatley & Ward herd and are out of cows that have been selected for their productiveness and individual merit. Few, if any, better places are found to buy Angus bulls than at Messrs. Wheatley & Ward's. If in the market write them and go and see the cattle. A GRANDLY-BRED SCOTCH BULL FOR SALE.

One of the best young Scotch bulls offered for sale in a long while is named Sultan, a yearling son of Imp. Bapton Admiral and out of Souvenir by Imp. Salamis. He is one of the most richly-bred Cruickshank Scotics, and he is one of the best individuals ever bred by Mr. C. C. Norton, of Cornland, Iowa. We desire to say to the Short-horn man who is looking for a herd head that he will find in this young bull one of the best that has been offered for sale in many years. He not only has the breeding, but he also has the individuality. The thing to do is to go and see him.

CHOICE GOODS AT HOME.

Mr. Howell Reese, of Pilger, Neb., the man who had nerve enough to pay \$5,500 for the great bull, Choice Goods, has him nicely quartered in his new home on his farm near Pilger, Neb. Mr. Reese has accepted a number of good cows that he will breed to Choice Goods at \$100 per head and he will take a few more at the same price. Any of our readers who want to breed a cow to this great bull had better write Mr. Reese at once. He also purchased at the same sale the noted show cows, Ruberta and Sweet Violet 4th. Mr. Reese has an excellent herd, and while not large in numbers, will rank very high from the point of individuality. When writing him mention The Homestead.

HOMESTEAD SELLS TWO HERD HEADERS FOR LOUDEN & SONS.

Messrs. H. Loudon & Sons, of Clay Center, Neb., write that they have sold their two herd headers, Hambletonian and Paul Jumbo, as well as selling a spring gilt sired by Hambletonian. The grand sire, Hambletonian, was shipped to Messrs. Manlove Bros., of Bowen, Ill. The price was \$200. These same gentlemen purchased one of his get at a good figure. They have purchased one of the good boars of the breed and will undoubtedly get value received in a short time. Paul Jumbo was sold to the well-known firm of Messrs. Ward Bros., of Republic, Kan. Paul Jumbo is a very promising yearling and should do well in the Ward herd. The above sales were made through The Homestead. This will prove that The Homestead can sell the good ones in short order.

THE BACON HOG NEARLY REACHES SEVEN CENTS.

That the hog market is soaring towards the clouds was evidenced at Chicago on July 5th, when bacon weights brought \$6.95, the highest price of the year and the highest for a number of years. The demand for the bacon type of hogs is growing stronger every day. The American people are consuming more bacon than ever before, and the packers are calling for this class of hogs and are willing to pay the price. One of the best bacon hogs known is the large, improved Yorksires, and they are the most prolific of all the different breeds. One of the best herds in the United States is owned by Mr. Rabaler, of Leigh, Neb., and he now has some 300 spring pigs on the farm. He has made another importation direct from Canada, and this is the fifth importation made by this well-known breeder. All of his herd boars and brood sows are imported from two of the

best herds in Canada and England and he has the cream of the breeds. He can furnish a foundation for a herd, both males and females, not akin. There never was a better time to start a herd of large, improved Yorksires, and there is not a better herd in the country, from which a foundation can be procured. Write to Mr. Rabaler and have him select a boar and a few sows for you. His prices are very reasonable. Kindly mention The Homestead when writing.

PRITCHARD'S BIG POLAND CHINAS.

Anyone wanting a good Poland China boar should read the advertisement of Dr. H. Pritchard, of Wisner, Neb., on page 22. He is one of the best-known and one of the most reliable breeders in the West and he has the goods to show for it this year. He has forty boar pigs sired by Big Tom 2d, considered one of the largest boars in the state, and he will weigh about 1,000 pounds without any fitting. He also has some grand good pigs by Wisner Chief, a son of Chief Tecumseh 3d; Perfection Keep On and Black Joe. Mr. Pritchard will be pleased to have you call and see him, or will be glad to bear from any of The Homestead readers. He can suit the boys, both in price and quality.

A \$15 HARNESS FOR \$10.98.

Every farmer can use a good set of harness and any bargains which we can offer him through our columns will surely be appreciated. This week the Glazier Harness Company, of Fort Madison, Iowa, are offering a great bargain in a fine set of harness which they will sell for \$10.98, the buyer to have the privilege of examining the harness thoroughly after he receives it, and if it is not exactly as they represent it he can return it and get his money back. Surely no fairer offer could be made than this, and as the company is a thoroughly responsible one our readers may rest assured they will be honestly dealt with in every way. It is one of the best harness offers ever made and no doubt hundreds of our readers will take advantage of it. It might be well in writing the Glazier Harness Company to say that you saw their advertisement on page 10 of The Homestead.

WOODLAND HERD OF DUROCS.

Manley Orion 30925, at the head of the Woodland herd of Durocs at Ames, Iowa, will be on exhibition at the Iowa State Fair this year again. So will some of his get. Manley Orion will not have any special fitting, just coming in his every-day clothes. The Homestead representative recently visited the home of the proprietor of this fine herd, Mr. S. P. Freed, Ames, Iowa, and was shown about the premises. Mr. Freed knows how to raise good hogs, and in his lot of youngsters on hand this year will be found extra big-class individuals. Litters are found here by Manley Orion, Proud Advance, and Keep On 2d. One very good litter traces to Nebraska Belle, as well as one litter by Tientsin, tracing to Crimson Wonder. Mr. Freed is going to hold his brood sow sale on Feb. 11, 1907, and will be prepared for that event when the time arrives. Watch for his boys at the state fair. They will please even the most exacting buyer.

LOUDEN & SONS' SHORT-HORN DISPERSION.

The well-known firm of Messrs. H. Loudon & Sons, of Clay Center, Neb., have decided to offer the public their very strong herd of Short-horn cattle. This firm have always made it a point to own the best they could buy and consequently the sale on July 18th promises to be one of much interest. The fact that Messrs. Loudon are offering the best cattle goes to show that they are reliable. The farmer or breeder can rest assured that he will be treated in a business-like manner. The Loudon herd of Short-horn cattle embraces some very strong families. Several Scotch-topped cows will be found in the offering. The farmer looking for a pure-bred cow or so to add to his herd should by all means attend the Loudon sale. The milking strain alone will more than make them valuable. The useful Short-horn cow is today making ready sales. The farmer is demanding a cow that can be used for dairy purposes. We will say the Loudon herd of cattle are of this type, being good mothers and high-testing animals. The thirty head will consist of matured cows, heifers and a few bulls. The offering is strong in individual merit. The cows with calves

DEWEY Stock Waterer

Prevents Disease
Fattens on Water
Costs Little
Lasts Forever

Attaches to the outside of tank or barrel. Its greatest value is in watering hogs, sheep, calves and poultry. Permits the animal to drink as it desires—positively necessary to economical and quick fattening. Prevents crowding and hurried drinking. Avoids the injurious watering of stock at feeding time. The Dewey lasts forever. Can't wear out or rust out. Never runs over or falls to fill.

Free Book tells how to fatten stock with water. Sent anywhere. Sold by Dealers or by Mail.

Most wide-awake dealers sell the Dewey. If yours does not, don't take a substitute, but write us. We will sell you direct from the factory. Write for booklet anyway.

The B-B Manufacturing Co.
409 West Fourth Street, Davenport, Iowa

at foot are in good thrifty condition and will give the purchaser the expected results. The bulls in the offering will show for themselves on sale day. If you are looking for some bargain you should try and attend this sale. Sale will be held at the farm adjoining Clay Center, Neb. The catalogs are now ready. Col. T. C. Callahan will cry the sale. Be sure and mention The Homestead when writing.

A FAVORITE ROOFING.

Among farmers in all parts of the country Amateite Roofing has been growing rapidly in favor on account of its low cost and its great durability. Although it is a better and more permanent roof than the average "ready roofing," it is as easy to lay as a carpet, requiring no special tools or skilled labor. The silver gray mineral surface of Amateite is easily recognized on the roofs and adds much to the appearance of the farm buildings. Sample and booklet will be sent in reply to a postal addressed to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans, Boston and Cincinnati.

GRIFFITTS' DUROC JERSEYS.

A representative of this paper recently inspected the suburban herd of Duroc Jerseys owned by Mr. H. B. Griffiths, of Bowen, Ill., and was much pleased to note the excellent lot of pigs which he has been able to offer for the season's trade. At the head of his herd he is using Top Notcher Chief 29247, he by Top Notcher Again by Top Notcher and out of Nellie IV. 36210, she by Pathfinder 9325. This boar Mr. Griffiths secured from Messrs. Johnston Bros. & Newkirk, of Brooklyn, Iowa, who purchased him from Mr. J. A. Teter, of Remington, Ind., at the World's Fair, where this boar won first in class and junior championship, also reserve grand championship. Top Notcher Chief was also first at Wisconsin State Fair the same year, and his sire was a winner at the St. Louis Exposition and champion boar at the Illinois and Indiana State Fairs in 1903. Many readers of this paper are familiar with this boar and to those who have not seen any of his breeding the writer wishes to state that he has proven himself a very profitable sire, much of his get being found in the best herds of the country. The other boar which Mr. Griffiths is using at the head of his herd is Fancy Orion 40675. The sire of this boar was Orion Chief 13333, the first prize winner at the World's Fair and heading the yearling herd that won three firsts and grand champion herd of the entire show. The dam of Fancy Orion was Fancy Gem 30806, she by Chief Surprise 9853. This combination of breeding gives to the buyer an unexcelled opportunity to secure that which has made many of the leading herds east of the Mississippi river the records which they have today. The sows in the herd are of the show-yard type and quality, and come from the prolific families of the breed. Mr. Griffiths is fitting up an extra good show herd, which will be seen at the Illinois State Fair this year. A litter which attracted the attention of the writer was sired by Tip Top Notcher, and is out of My Lad's Goldie 95686, she by Seck's Kan't Be Beat 29913 by Kan't Be Beat 28067. This litter consists of three sows and two boars, the latter not being offered for sale at this time, but retained as special attractions for Mr. Griffiths' fall sale. At the present writing Mr. Griffiths is offering for sale some extra good fall boars by Griff's Banner, a son of Suburban Chief. They are out of Hazel 95684, she by Colonel Pearson; dam Bowen Beauty 55246 by Waneta Banker 11257; three yearling boars that should go to head some extra good herds, are sired by Van's Hero, and are out of Vanity 95690 by Perfection 10373 (A.) by Sensation 7393 (A.). Some breeder who is in need of a good herd boar will find very good ones in this herd, and Mr. Griffiths will be pleased to furnish any information regarding what he may have for sale to those who are interested. Of the spring pigs two litters are sired by Big I Am, two by Hanley, and two by Ambition, one lit-

ter by Major R., and one litter by Top Notcher Chief. Such a variety of noted breeding will give breeders an opportunity to secure some of the best stock which is offered for sale at reasonable prices. Look up the announcement on page 24 of this issue and write Mr. Griffiths if in need of breeding stock, kindly mentioning The Homestead.

NORTHWESTERN HIDE & FUR CO.

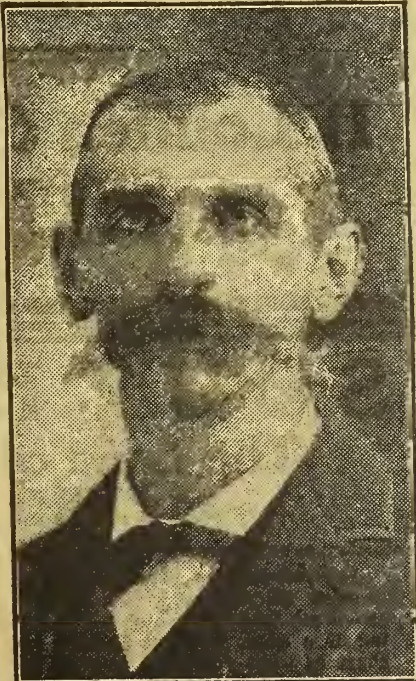

The Northwestern Hide & Fur Co. report a large increase in the sale of their Uncle Sam Sheep Dip, Cattle Wash and Disinfectant, and that most of the wool received shows an improvement in the condition over the average lots of years past, and that clips of wool from sheep that have been properly dipped bring from one to two cents per pound more than those not dipped, and the average of the fleeces one to two pounds more. This produces a double gain. The reason is that the sheep are not tormented with parasites, consequently are so much healthier, producing a larger carcass and better wool. Wool, although high, is bringing three to four cents less than the high point of last year. Best clips bring twenty-five to twenty-six cents. While this is lower than it has been it is very remunerative to the grower. We commend this old reliable firm to our readers, either for buying dip or selling wool.

A SERIOUS MISTAKE.

There are many persons who are suffering from what are termed private diseases who fail to go to a physician for treatment because of a sense of shame that they are in that condition. This is a grave mistake. Failure to go where thorough treatment can be obtained is much more disgraceful and the consequences much more terrible. Treating these diseases is the physician's business and he thinks far less of the matter than you do. The fact that you are treating with him is a professional secret that he never violates. The terrible consequences that are sure to follow the neglect of placing yourself in proper hands for treatment demand that you do so. Many a life has been ruined because of this false modesty. Men have transmitted diseases to their children, bringing disgrace not only upon them, but upon the community. They have grown old before their time and gone through life as human wrecks. It is the duty of every person who finds himself afflicted with a disease of a private nature to seek medical aid at the earliest possible moment and persistently follow up the treatment until entirely cured. Drs. Fellows & Fellows, of Des Moines, Iowa, have made the treatment of this class of diseases their specialty, and have been remarkably successful. They are gentlemen of the strictest integrity, and if they cannot cure you they will tell you so. If they tell you they can cure you they will do so. Your duty to yourself and your fellowmen demands that you keep yourself in health. If afflicted go and see or write Drs. Fellows & Fellows. If there is any cure on earth for you they will cure you. This paper recommends them. See their advertisement on page 14.

AN IMPORTANT DUROC SALE.

We wish to impress upon the Duroc Jersey breeders of the central West the fact that the offering which has been selected for the forthcoming Duroc sale of Mr. J. D. Nidlinger, of Decatur, Ind., is one of the best which has gone through a public sale ring for a number of years. When the question of holding a sale in August was first put to Mr. Nidlinger the full signifi-

MR. J. D. NIDLINGER, DUROC BREEDER, DECATUR, IND.

cance of such sale did not enter his mind. It meant that he must not show any stock at the leading fairs, which in face of the fact that his herd won more prizes at the Ohio and Indiana State Fairs in 1905 was an important sacrifice. This year Mr. Nidlinger has selected and is fitting the best stock he has ever raised. These are receiving the same treatment they would if he were to show himself, and the writer representing this paper is pleased to recommend this offering to our readers. Some breeder in the West who is short a good show herd will find this an unequalled opportunity to secure one, or make additions to the already strong herd which he may now have, as the class of stock owned and bred by Mr. Nidlinger is of strictly show-yard merit. Herd boars may also be found, both for show-yard purposes and to use in herds. In our future issues we will have more to say regarding this offering and

BEFORE YOU BUY A MANURE SPREADER

SEE that its frame and sills are made of oak; that it has a ball and socket joint on front axle to prevent racking and twisting and steel braces and steel truss rods to guard against warping and sagging. See that the apron does not run backward and forward on hilly ground but insist on a positive and continuous apron drive.

"A boy can run it"

See that it is practically automatic and so simple that any boy who can drive a team can run it as well as any man and control its every operation without leaving the seat. The

Appleton Manure Spreader

has all these improved features and many others equally important. Write to-day for free catalogue of special prices and terms.

APPLETON MANUFACTURING CO.
30 Fargo Street, Batavia, Ill., U. S. A.

would urge our readers to write early for catalogs, mentioning this paper, as the supply is limited and catalogs will be mailed in the order in which they are received. Plan to be present at this notable sale in person and select something bred right, fed right, and last, but not least, individually of the right sort. Kindly mention this paper when writing.

THE NEW SELLING PLAN OF THE AMERICAN HARROW COMPANY A WONDERFUL SUCCESS.

Probably no big manufacturing concern in the country ever scored quite as big a success in changing their selling plan as has the American Harrow Company, of Detroit, Mich., manufacturers of the American Manure Spreader, the New American Cultivator, and the Detroit Tongueless Disk Harrow. In the manufacturing of their different implements they have never sacrificed the quality for price, and their machines have always been of the highest grade. This is particularly true of their celebrated American Manure Spreader. It is not an experiment, but the finished product is the result of years of actual working tests. The American Harrow Company for many years sold spreaders through the jobber and dealer. This last year they adopted a new selling plan: The plan of selling direct to the user of the machine, on trial, and on time. Now, to the farmers who are interested in the question of fertilizing—and every thinking farmer must be interested—we would suggest that they write to the American Harrow Company and get their books, not only their catalog, but their booklet on the "Value,

Care and Application of Manure." These books are free, and will be sent cheerfully on request. You can get them by addressing the American Harrow Company, Detroit, Mich. Simply say you would like to have their catalog and literature. Their advertisement on page 11.

BLAIN'S POLAND CHINAS COMING ALONG AS USUAL.

The well-known Poland China breeder, Mr. John Blain, of Pawnee City, Neb., is having his usual good luck with his Polands. This gentleman has made his reputation on the large, growthy type, with plenty of quality and finish. His herd has afforded many herd headers of note and the writer has inspected several of his last fall output that are going to be heard from. The Blain Polands meet with the approval of the hogmen in general. Mr. Blain recently sold his great show and breeding boar, Johnson's Chief. He is now looking for a pig or hog to fill the vacant place. The man having the right hog will make a sale by letting Mr. John Blain learn of it. The Blain sale will be held on the first day of November, and you can rest assured that you will be treated to one of the best offerings ever placed in a sale by this reliable breeder. Watch for his announcements through our columns. For further information write Mr. Blain, at Pawnee City, Neb.

NEW ENGLAND AND CANADIAN POINTS. The Chicago Great Western Railway will sell round-trip tickets to the above points at very low rates on certain dates this summer. It will pay you to call on city ticket agent, 514 Walnut St., Des Moines, Iowa.

DAY BY DAY

Agricola

June 29. The weather since corn planting has been ideal for corn. Our own in forty years has never been larger at this date. Besides it is clean. It has been cultivated four times.

The rains have been seasonable, and everything that grows is on the boom. The corn blades are "crinkly" and dark green, which every country boy knows is a sure sign of rapid growth.

Potatoes of the Early Ohio variety are also large. To prevent scab we bought new, clean seed and planted in ground which had not raised potatoes in all its history. The madam is using them and reports them smooth and free from the disfiguring disease. There is a large breadth of ground devoted to the tuber in this locality.

Cherries are \$1 a bushel. It hardly pays to gather them for that price, but one does not like to see them go to waste. We have two varieties. One is the common red cherry, the other almost black and is known as a heart cherry. It is later than the red.

The madam bosses the fruit business, as do all the madams about us of whom we know anything. We gathered a crate of blackcap raspberries this morning for which we were paid ten cents a box in things from the grocery. The Kansas and the Cumberland are our favorite varieties. They are large and the plant is very hardy. If we knew of a better berry, we certainly would invest in it.

However, we have a red variety far better for our table than the blackcap. It sprouts, but does not tip. A box of them will bring more than two boxes of blackcaps. A farmer should enjoy the best of everything he raises on the farm. We don't sell this variety. We take them with good cream.

We have some clumps of service berries. This fruit sells for the same as other berries and is very prolific. The bush is a trifle taller than a currant bush. By the way, currants were so plentiful that it was difficult to find a market for them. This is a great year for all sorts of fruit that grows in this latitude. Even many peach trees are laden to their full capacity with fruit.

The late rains have assisted the meadows a great deal. We think that we shall have enough hay for the ensuing year. "Sufficient unto the day is the evil thereof." We will not worry until we are smitten with failure. It will be time enough then.

We have never seen more seasonable rains than we are having. The weather wizards, Doctors Sage and Chappel, are managing things delightfully; that is, their reports are never pessimistic. The weather reports are the first things the farmer looks for in his daily.

The good prospect for corn is having its effect on the price of old corn. Sold at the farm the other day two loads of good corn at thirty-six cents by measurement of the wagon bed. Sold oats likewise at twenty-two cents. Last year's crop was damaged to some extent.

Saw a field of pure red clover last Sunday a week ago. Was going to a country church. The clover was rank and in full bloom. Sowing red clover is our favorite method of restoring fertility to land. We have proved it successful on a worn-out field we had lately bought.

Chautauquas are much the vogue these later years. Well, we approve of them. Had you, Mr. Editor, seen the carriages around the grounds last year you would have said that the country had overflowed the ground. There is generally some liveliness about them. We need a modicum of fun in our lives.

A life of constant work is too much of a satiety. One wants a little fun here and there for a variety.

Then Agricola is strongly of the opinion that to get money is not all of man's mission here below. To view everything by what it will bring in hard cash is a species of idiocy. We believe that a bank account which will place a man above want, start his youngsters comfortably in life, with a fund to give to

worthy objects, is a happier condition than to be a Rockefeller billionaire with the worry such wealth must necessarily bring.

We read such works as Twain, Nye, and Peck as offsets to works by Drummond, Daniel Webster and the Congressional Record. This last is to us worthy of any man's while to read, for we must remember that it requires more than an ordinary citizen to reach either branch of congress.

The little, spotted ground squirrel delights in a diet of young peas. So does the English sparrow. It is rather tough on the farmer and the gardener that everything he raises has its enemy.

We have discovered a striped caterpillar eating ripe raspberries. We killed some today. They were on the fruit, not the leaves. It is the first time in our life that we have ever seen them.

However, we have measurably prevented the euculio thus far from destroying the plums. Manure from the stable scattered under the leaves coaxed all the old hens with chickens into scratching there with their broods. We have a Burbank plum tree which is a sight to look at, so heavily laden is it with fruit.

CHICAGO MARKET LETTER.

Clay, Robinson & Co. furnish us with the following resume of the markets in Chicago, date July 6th: The week's cattle supplies show a very material decrease from last week's, this being due to Independence Day falling upon Wednesday. The market has been active throughout the week, with more desirable grades making quite a little improvement. There is a strong demand at the present time for nice, fat young cattle, both steers and heifers. This is evidenced by our sale on Monday of twenty head of Short-horn yearling steers and heifers, averaging 990 pounds, at \$5.75. The same day we also sold a load of yearlings, including six steers and twenty-eight heifers, averaging 824 pounds, at \$5.35. The general condition of the trade shows great improvement, but causing stock continues to sell very badly. The packing house agitation very materially reduced the demand for this class of stock and it will be some time before the prejudice instituted against this class of meat will have died out. There has not been very much change in the stocker and feeder market this week. As is customary in July the demand is quite light, and there will not be very much active trading in this line for at least three weeks.

The hog market has, with moderate receipts, ruled strong throughout the week, although it is showing a weak close. As high as \$6.95 was paid during the week, but the top today was \$6.80. All grades, with the exception of the common packers, have been in good request and the outlook for this class of stock continues favorable.

The sheep and lamb market has also seen some improvement. Best spring lambs have sold up to \$8.25, but so far as common and medium stuff is concerned it has been very hard sledding. As yet very few grass western sheep have reached the East, but they will shortly be coming freely and will naturally affect, more or less, the natives.

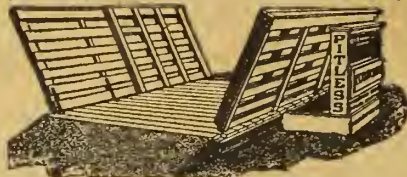

We quote:

Good to choice export wethers.....	\$6.00@6.25
Fair to good wethers	5.40@5.75
Good to choice heavy ewes.....	5.00@5.35
Choice handy-weight ewes.....	5.50@5.75
Medium ewes	5.00@5.25
Culls and tall ends	2.50@4.00

The Louden Dispersion Sale of Short-horn Cattle

At Clay Center, Neb., on July 18th.

30 HEAD OF COWS AND HEIFERS AND A FEW BULLS. 30

Royally Bred----Strong Individuality---Heavy Milkers---Good Mothers

WE have decided to offer the public the herd of cattle that has made us money. The herd has been mated with good strong bulls, being strong in the blood of some of the noted families. We offer this herd, believing them fit to go into your possession and return good results. The cows have been carefully selected. We have the heavy milking strains. Part of the cows will have calf at foot. Every animal guaranteed as represented. Sale will be held at our farm adjoining Clay Center, Neb. Catalog is now ready.

H. Louden & Sons, Props.

Clay Center, Nebraska.

T. C. Callahan, Auctioneer.

SOUTHWEST

The Land of BIG CROPS and PROSPERITY

Are you making as much off your farm as you ought? No doubt you are making all you can. The trouble is the land costs too much. It takes too much money to buy a big farm, and so you are trying to make a living on a small farm, or perhaps you are renting one and paying a good share of what you raise, in rent. Wouldn't it be better to go where the price of good land is so little that you can own a big farm—where every acre of ground is working for you and all you raise is paying you good profits?

There are thousands of acres of fertile land in the Southwest along the line of the Cotton Belt Route that can be bought for from \$3 to \$10 an acre. This land is increasing in value each year.

See the Southwest at Small Cost

A trip to the Southwest would convince you that your best interests lay in settling there. The trip can be made at very little expense. On the first and third Tuesdays of each month you can purchase a round trip ticket to any point in the Southwest on or via the Cotton Belt Route at very low rates. Stop-overs will be allowed for you to examine any locality you are interested in.

Write at once for free copies of books describing this wonderful country and for full information about cost of tickets, etc.

The New State of Oklahoma

Statehood for OKLAHOMA and Indian Territory will give this section a tremendous impetus in growth and development. Even now, the towns and cities are growing up, requiring more and demanding more pushing wide-awake citizens who see the virtue of encouraging enterprises of every kind, in needfulness of getting more and better facilities, and more hands to develop the country.

Briefly, the condition is this: OKLAHOMA is really in need of nothing save people. More men are wanted. There are vast areas of unimproved land—land not yielding the crops of which it is capable. The same thing, in a different way, is true of the towns. Few lines of business are adequately represented. There are openings of all sorts—for mills and manufacturing plants, for small stores of all kinds, for banks, newspapers and lumber yards. Mechanics and professional men both are in demand.

Your Opportunity Now

while land is cheap and the country is settling up.

On July 17, August 7 and 21, exceptionally low rates will be made to OKLAHOMA; tickets good thirty days from date of sale and permitting stop-overs at pleasure. This rate, with the stop-over privileges, will enable you to thoroughly investigate every section of the new state.

If you are interested in OKLAHOMA you should read the July issue of my free paper, "The Coming Country." Write for it today.

HORSES.

W. A. LANG & CO., GREELEY, DELAWARE COUNTY, IOWA

—IMPORTERS AND DEALERS IN— CLYDE, SHIRE, BELGIAN, PERCHERON, FRENCH DRAFT, GERMAN COACH AND STANDARD BRED STALLIONS.

WE have always on hand a good selection of the above named breeds. We give the most liberal guarantee of any firm doing business. Our horses are all the best in their class. Colors, all bays, blacks and dark grays. No old worn out pickings. We make a specialty of organizing farm companies and know how to do it and give satisfaction. We can't sell you horses unless for the reason that we don't handle them. Greeley is the great stallion center of Iowa where you can see more top horses than any other place in America. Write

Greeley Horse Importing Co.

Percherons, Belgians, Shires, Clydes, French and German Coach, Hackney and Trotting Stallions.

HAVE received 250 head since September, 1905. 100 head arrived in June. Bring cash or bankable note and buy horses at dealers' prices. Send six cents in stamps and we will mail you a beautiful six-colored, 19x24 picture of our premises, showing over 200 stallions in the yards.

A. B. HOLBERT, GREELEY, IOWA.

FOR SALE.

MILFORD STUD of Prize Winning Percherons. High class young stallions for sale at all times. Our horses are all grown in the blue-grass pastures on our own farms near Ames, the seat of the Iowa State College. In point of breeding and individuality they are the equal of the best imported stock, having won high honors in competition with prize winners of Europe. Buy a Money Maker, an American-bred horse—one that is accustomed—one that you won't have to carry at a loss for two or three years to find out whether he is a breeder or not. Long time and easy terms to responsible parties. Address S. B. FREY, Nevada or Ames, Iowa.

LAKEWOOD FARM THE GREAT BREEDING ESTABLISHMENT.

Percherons, Short-horns, Jerseys, Poland Chinas.

FREE LANDS FOR HOMESTEADERS IN THE Shoshone Reservation of Wyoming

Uncle Sam will give everybody entitled to take up homesteads a chance at these lands, comprising approximately 1,150,000 acres. It is estimated that between 300,000 and 400,000 acres are first-class agricultural lands susceptible of irrigation. The remainder are grazing, timber and mineral lands.

To secure a homestead you must register at one of the points designated by the government on any day from July 16 to 31, 1906.

The Burlington Route will sell very low-price round-trip tickets daily from July 12 to 29, inclusive. Those who make sure their tickets read to Worland, Wyo., have the great advantage of reaching the reservation over the Burlington's line thro' the heart of the Big Horn Basin. To see this rich irrigated section is worth any man's time and money.

For further information, just fill out and mail this coupon TO-DAY.

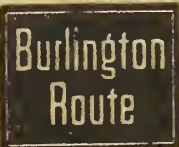

P. S. EUSTIS, 209 Adams Street, Chicago.

DUROC JERSEY HOGS.

Dispersion of the Famous Gold Dust Herd of Durocs.

HAVING decided to close out my Gold Dust herd of prize winning Duroc Jerseys, I now offer to the public, at private treaty, my entire crop of spring boars. They are sired by Tip Top Notcher, grand champion at World's Fair, acknowledged by most competent judges to be the best Duroc boar in America. Ohio Chief 11, one of the best sons of Ohio Chief; Champion Paul, a son of the noted Oom Paul; and Pacer, Ohio an exceptionally good son of the World's Fair winner, Orion Chief. I am keeping my sows and spring gilts for closing out sale on October 24, although I have received tempting offers for them at private treaty. I am keeping nothing back and my entire herd will be disposed of at private and public sale. Write for prices and descriptions at once if you want a herd boar from Gold Dust herd. Address,

GEO. W. SECKMAN,

RIPLEY, ILLINOIS.

HIGHEST auction average. Owners of the celebrated sweepstakes show sow Bessie H. and the sensational Alix II. Many other prize winning and producing matrons among which may be mentioned Miss Bob, Village Pride, Sutton Lady, Van's Lady, Lady Top Notcher, etc. Seven Ohio Chief litters growing. Six fall boars for \$25 each. Boar sale October 16, 1906.

COLLEGE VIEW, NEBRASKA.

Fall Sale Oct. 31, 1906. Spring Sale Feb. 6, 1907.

HOME OF

THE Lad For Me 10733A and his daughter, Helen Blazes 64502, the dam of the \$1,000 gilt and the \$1,910 litter, and Lib C. 67204, dam of the first prize litter at Illinois State Fair, 1905. Choice pigs of fancy breeding. Prices in keeping with quality. A great variety of the very best breeding. We guarantee satisfaction. Visitors welcome. Farm three-fourths mile from depot. Fagan, Browning, Hess & McCabe, Hersman, Ill. Sale Average \$116.48.

THE AUDITOR 34097 FOR SALE.

SIRE by Orion 5293 and out of Kruger's Maid, the \$410 sow. He is 3 years old and a good breeder. Also two young boars, also sired by Orion. Will be priced right.

A. B. Enster & Sons, Fremont, Neb.

Shamrock Herd of Duroc Jerseys

OF Prize winning sires and dams. Have a few boars left and some sows and gilts.

F. M. ERSCHEN, Odell, Illinois.

DUROC GILTS

BRED for fall farrow. Choice individuals, breeding second to none. Satisfaction guaranteed. W. S. Penn, East Lun Farm, Springville, Linn County, Iowa.

DUROC JERSEYS FOR SALE.

I HAVE for sale 65 to 70 bred spring Duroc gilts out of Buddy K IV 20861, first prize and Champion winner at Illinois State Fair, 1905. Bred to Roland 37255, as good a yearling hog as walks today. Write for catalogue. Rhode Island Red Chickens. Ed. A. Baxter, Pawnee, Illinois.

LAMONI herd of Duroc Jerseys, headed by Ben Davis, first prize boar at Iowa State Fair. Pigs sired by six prize-winners or sons of prize-winners, such as Ohio Chief, Proud Advance, American Royal and Brilliant. Pigs for sale with length and bone. Guaranteed. Write, J. S. Tenie, R. 4, Lamoni, Iowa.

FAIRVIEW DUROCS

Am offering a few choice full males and gilts. Write me if you want good ones nicely bred.

J. B. DAVIS, - - Fairview, Kansas.

CRIMSON Wonder fall boars. A few very strong full boars sired by Crimson Wonder (now dead). Boars are from best sows and pronounced herd headers. Prices right. W. A. Kirkpatrick, Lincoln, Neb.

HILLCREST Farm Duroc Pigs. Best breeding. At weaning either sex, \$6 each; pairs not nkin 11.00; trio \$15.00. Hillcrest Farm, Greenwood, Mo.

SUTTER's growthy Duroc fall males got by Neb Wonder, he by Crimson Wonder are now ready to ship. Write me. Wm. Sutter, Liberty, Nebraska

GREENBELT herd Durocs, of the most fashionable blood lines, and of superior individuality. F. H. HERRING, R. F. D. 7, Iowa City, Iowa.

MIDLAND Durocs. 60 pigs for the trade, Apr. and May farrow. Extra good in feet, back, bone. Low prices till Sept. 1st. S. J. Butts, Mason City, Iowa.

DUROC JERSEY HOGS

OHIO CHIEF 8727, THE GREATEST LIVING DUROC JERSEY SIRE. OWNED BY

R. J. Harding,
Macedonia, Ia.
PUBLIC SALE,
October 3, '06

At which time I will offer a splendid lot of Ohio Chief, Orion and Proud Advance boars for sale.

O. E. Osborn,
Weston, Ia.
PUBLIC SALE,
October 4, '06

At which time I will offer a grand lot of Ohio Chief boars for sale. Remember the dates.

STONER'S DUROC JERSEYS

200 SPRING pigs sired by Stoner's Improver, Advance Col (one of the best sons of Proud Advance), Ohio Ben, he by Chief Surprise and other noted boars of the breed. Write your wants. Description guaranteed.

T. W. STONER & SON,

HENRY, ILLINOIS

CRIMSON WONDER I AM

SOWS and gilts bred to this great sweepstakes boar for fall farrow. U. G. Davidson, Manson, Iowa.

The "Nancy Herd" Durocs

Boar sale November 8. Pigs by Orion, Junior Jim, Critic's Eda. Sow sale February 25. Inspection invited. 125 pigs. Write us.

W. A. STAPLES & SONS, - - - - GLIDDEN, IOWA.

WON more prizes at Indiana and Ohio state fairs 1905 than any other Duroc herd. Stock reserved for public sale August 8.

J. D. NIDLINGER,

DECATUR, INDIANA.

UNGLE'S HOGGETTE, THE HOG REMEDY,

Is a preparation easy to feed and the best corrector on the market for hog troubles. It is strongly endorsed by such breeders as John Blain, Pawnee City, Neb.; T. J. Congdon, Pawnee City, Neb.; J. O. Hunt, Marysville, Kan.; Geo. Briggs & Son, Clay Center, Neb.; G. Van Patten, Sutton, Neb., and many other good breeders. Herds visited at \$5.00 per visit and expenses. Wire or address,

THE UNGLE'S HOGGETTE CO., 1525 P. St., Lincoln, Neb.

SHELDON BROS.,

A NEW FIRM. BUT the same old herd. Our herd is rich in the blood of Proud Advance 2354, the greatest sire of show quality of the Duroc breed. Nothing for sale until September. We will be at all the leading State Fairs. Look for the Proud Advance herds.

Shannon City, Iowa.

Successors to H. C. Sheldon & Sons.

Bred sows that carry the blood of Gold Dust Jim, Improver 11, 2d Surprise, Red Chief 1 Am, Glendale Critic. Remember our guarantee. Dice & Garber, Beaver Crossing, Neb.

REMLEY'S DUROCS

A LIMITED number of choice gilts, bred to a son of the Junior champion sow at the World's Fair, for sale at reasonable prices. Write me at once and secure the best to be had for the money.

JOHN W. REMLEY, - - Lacon, Illinois.

12 GOOD ORION BOARS

FOR SALE. These are out of some of our very best Duroc sows and it is about the last chance to get an Orion boar. Write quick if you want one.

MANLEY & CO., LYONS, NEB.

PILOT LAD 15153.

2d prize under year Duroc boar Illinois State Fair, 2 1905, for sale. Fall boars of herd header type, also a good lot of fall sows and spring pigs at reasonable prices.

L. H. Bryan, - - R. R. 1, Neponset, Ill.

KRASCHEL'S DUROC JERSEYS

150 SPRING pigs by Mayor Jr., first prize winner Illinois State Fair, 1905, and Gold Cloud, first and sweepstakes boar Illinois State Fair, 1904, for sale at reasonable prices.

Fred Krschel & Son, Macon, Ill.

THE \$410 sow, Ding Nicely. I have decided to offer some of my choice spring pigs sired by my herd boar Aethelred by Tip Top Notcher. Others sired by Ohio Chief, Morrisons' Bell Top. Sows represent the blood of the great Crimson Wonder, and Aethelred. Some promising pigs will be priced to sell. Fall sale will be held Oct. 15th. A. Wilson, Bethany, Neb.

A Few Good Duroc Jersey Boars For Sale

MUNSON'S Perfection, a son of the sweepstakes boar, King Perfection and Orion's Model, a grandson of Old Orion. Also a few young boars. Write me at once. Address,

J. E. WEHR, PORTSMOUTH, IOWA

ULSTER PARK DUROCS

BRED sows, fall boars and gilts. I am offering a lot of young and some mature sows bred to farrow in September; few fall boars. Write,

M. M. ELMENDORF, - - Lacon, Iowa.

112 CHOICE DUROC JERSEYS 112.

SIRE by Duroc Challenger's Wonder S 34637, Crimson's Critic 40921 and Chime's Advance 32791, a son of the great Proud Advance. We have a choice lot of pigs. Write us. M. S. Moats & Son, Randolph, Neb.

PIONEER HERD DUROCS.

ECHO King 18415 and Royal Top Notcher 23639 at head of herd. We have a limited number of sows left bred to the above boars and Sire Winner. If you want the tops come to us; we have the best. Correspondence promptly attended to. Address,

Arch Brown & Sons, Waterloo, Nebraska.

WATSON BROS., CRESTON, IA.

200 DUROC JERSEYS, out of Orion Proud Advance and Advancer sows. Pigs by Proud Advance, Keep On and Addy's Choice Goods. Public sale, October 3d.

CHOICE YOUNG DUROC JERSEY HOGS

OF BOTH SEXES at reasonable prices. Address

W. J. S. Taylor, Humeston, Iowa.

GRANT HERD DUROC JERSEYS.

I AM now ready to book orders for delivery after September 1st. Carl Hansen, Herman, Neb.

WANTED: Registered cattle, stallions and jacks in exchange for Illinois, Iowa, Missouri, Kansas, Nebraska, Minnesota or Wisconsin farm.

Box 151, Independence, Iowa

LIVE STOCK AUCTIONEERS.

FRED REPERT,
DECATUR, IND.

Live Stock Auctioneer.

Am selling for the best breeders in the United States at the most reasonable prices. My large sale tent free to parties desiring it. Speak English, German, Swiss and Low German. Phones—Office, 430; residence, 312.

Sixth Term Jones' National School of Auctioneering and Oratory
Davenport, Iowa.

OPENS July 23, 1906. All branches of the work taught by special instructors in each department. Students now selling in seventeen states and Canada. For free catalog, write,

Carey M. Jones, President,
Davenport, Iowa.

GEO. P. BELLOWES

LIVE stock auctioneer. Maryville, Mo. Sales of pure-bred stock of all breeds a specialty.

Col. Judd McGowan
CLINTON, ILLINOIS.

TEN years' experience in selling for the best breeders in several states; have made sales in 11 states in past five years. Terms reasonable. Write or wire.

A LIFETIME IN THE CATTLE BUSINESS.
A GRADUATE of Iowa Agricultural College. Five years in the Auction business. Successful sales in eleven states and Canada. Yet my terms are low. Write me. R. W. BARCLAY, Live Stock Auctioneer, MASON CITY, IOWA.

C. C. KEIL, LADORA, IA.,
LIVE STOCK AUCTIONEER.

FIFTEEN years' experience and a thorough knowledge of pedigrees. Prices reasonable. Also breeder of Short-horn cattle and Duroc Jersey hogs. Write for dates, mentioning The Homestead.

JAMES P. SPEARMAN, PAPILLION, NEB.
LIVE STOCK AUCTIONEER.

THOROUGHLY acquainted with pedigree and individual merit. Write me before booking dates

WHOLE NO. 2557.

ALFALFA FOR HOGS.

According to reports emanating from various parts of the central West this year, the loss among early pigs has been unusually heavy. Upon inquiry at a recent swine breeders' convention we learned that this loss amounted to almost 50 per cent among pure-bred hogs. Of course we do not believe that the mortality will be so great among grades, as these are farrowed later. March was an unusually dark, gloomy month, and everyone knows that a little pig must have sunshine during the first few days of his existence or the struggle will be soon given up.

Strange as it may seem, many of those who have lost heavily this year have been using what one might call ideal feeding methods. They have cut out the corn and have fed concentrated meals and have given plenty of exercise, and yet in spite of this the little pigs were not strong enough to stand the siege. Professor Smith, of the Nebraska Station, in his work on feeding, makes the following statement in regard to the use of alfalfa hay as a hog food:

Wherever it is possible, a farmer who grows alfalfa should put away the last cutting for pig feeding. Late in the season there is usually less rainfall, and the alfalfa grows up with a much smaller stem and correspondingly larger leaf surface. With early cuttings of alfalfa, the excessive bulk prevents a fattening hog from getting all the protein he requires. If he is forced to consume a proportion of hay sufficiently large for protein needs—by having it first cut in pieces and then mixed with corn meal—his limited digestive capacity is such that, although he is full fed, he is undernourished. The small stem and leafy character of the last cutting overcome this difficulty. It can be fed to good advantage in the proportion, three pounds of corn to one of alfalfa, though with the rack the pigs get all they wish, which will amount to about three or four to one of corn.

Although what is said above refers to the fattening hog, we are of the opinion that alfalfa will be used more and more in the future for brood sows. It not only supplies the nutrients in well-balanced condition, but there may be some virtue in the bulk part of such a ration. Farmers here and there throughout the corn belt are putting in an acre or two of alfalfa, and we are convinced that the use of this crop, particularly in the form of hay during the winter, will do much to impart vigor to the hogs of the central West.

THE WINTER WHEAT SEED BED.

Few cereal crops are more satisfactory than winter wheat where the danger of winter killing is not too great. It is not unusual for men to raise thirty, thirty-five or even forty bushels per acre. Indeed, we know of many instances where the latter yield was exceeded this year. At prevailing prices this makes a profitable crop even on high-priced land. Furthermore, winter wheat usually produces a heavy crop of straw, and there is not a farm in the corn-belt on which there is grown too much straw, providing it is properly used.

Winter wheat usually follows some of the spring grains, either oats, barley or spring wheat. In the drier areas the summer fallow is sometimes used to great advantage. However, in discussing the preparation of the seed bed at this time we shall take it for granted that wheat is to be seeded on stubble land.

The first factor of importance is that of plowing. There is considerable advantage in getting the soil plowed just as soon as the cereal crop is removed. We well understand that soil is usually very dry and hard at such a time. Nev-

ertheless, if one has the horse power it will pay to turn it over. When the land is plowed one is then in a position to take advantage of occasional rainfalls to work it down into a friable seed-bed. On the other hand, if the land is not plowed until just before seeding time the chances are that it will be impossible to make a satisfactory seed-bed.

After the soil is once plowed the or-

the case of winter wheat than in seeding small grain. Six or seven pecks of Turkish red will usually make a satisfactory stand. In fact, we have in mind one case this year where a very heavy crop resulted from the sowing of five pecks per acre.

As the Hessian fly has given very little trouble in the corn-belt in recent years, there need be little hesitation

conduct his affairs so that his employees will prefer to stay with him rather than make a change. Few will win out in the future on the old plan of working from five o'clock in the morning until eight or nine in the evening, unless it be at exceptional times when a rush of work is on.

Some of the best farmers that we know make a practice of having not only field work but even the chores around the farm buildings completed by 6:30 in the evening. This gives everybody a long evening to spend in whatever way may be desired. These farmers have no difficulty in finding good help and in retaining them after they are found.

There is something, however, apart from the number of hours an employe is called upon to labor. An employer may do much in the choice of his machinery to make work agreeable. There is a tendency just now in certain quarters to go back to the old walking corn cultivator. While visiting an agricultural college recently we observed that the corn was being tended with walking plows. Upon inquiry we found that those in charge considered that much better work could be done with the walking cultivator, and as the experiment station was to a large extent under the gaze of the public it was thought advisable to handle the crop in the most ideal manner. It was even suggested by those in charge that farmers would find the more general introduction of the walking cultivator profitable. We do not deny that better work can be done in a corn field with a walking than with a riding corn plow, at the same time we by no means advise this step backward. A careful man will ride a corn plow all day and not destroy more than twenty plants. Surely the energy expended in walking to save these twenty corn plants would be dearly expended. It is right and proper for our stations to point out ideal methods, but it is up to the farmer to employ the most practical means of reaching these useful ends.

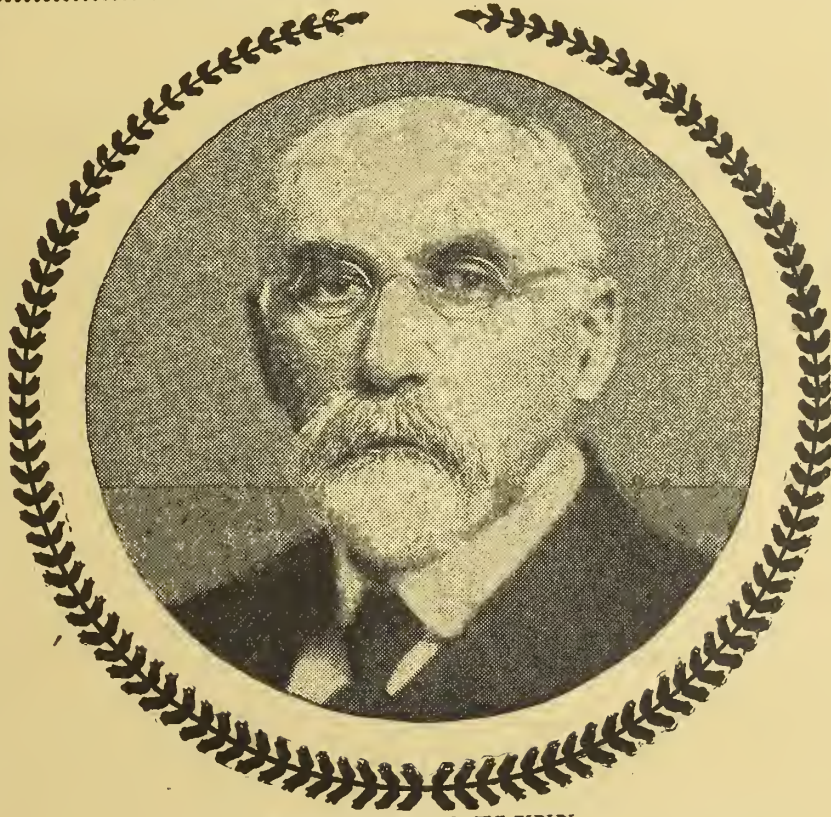

We favor riding machinery of all kinds, including plows, harrows, corn cultivators and throughout almost the entire list. We do this with a full realization of the whole situation, knowing full well how difficult it is to retain satisfactory help on the farm when you use old-fashioned machinery while your neighbors are using that which is up-to-date. It pays to do things well, and we are in favor of all the advanced methods that are advocated, but we also favor the practice of doing things the easiest possible way. The labor item of the future on the farms of the corn belt is going to amount to a problem, and we ought to begin now to solve it by planning to cut out all forms of useless labor.

PROFIT ON \$50 LAND.

A Missouri subscriber sends the following communication:

I own a 170 acre farm which would sell today for practically \$50 an acre. I am carrying a mortgage of \$3,500 and am unable to do any work myself. Do you think it possible for me to pay a man three or four hundred dollars a year to go on that farm and realize any profit? I can furnish a good work team, a pair of brood mares, fifteen cows and ten brood sows. Fifty acres of this land could be put in wheat this fall. Would you advise selling, or would you take the risk of employing a man to conduct affairs for you?

So much depends on the kind of man employed in this case that it is almost impossible to give any advice that will be helpful. By the time the owner pays

MR. MARTIN FLYNN,
Proprietor Walnut Hill Farm, Des Moines, Iowa. See page 2.

diary harrow will, if sensibly used, do the work in fitting up an ideal seed-bed. It is an easy matter to waste labor by attempting to harrow when the soil is dry and lumpy. Much more can be accomplished by waiting until the clods have been moistened. Of course if sufficient rain does not come between this date and seeding time to enable the breaking up of the clods it will be impossible to make any kind of a satisfactory seed-bed without the use of the roller. By using the roller and harrow alternately much may be done in the way of breaking down harsh lumps.

With the ordinary showers that are usually received during the next month we apprehend that there will be little difficulty, if plowing is done early, in getting the work done properly. The thing to keep in mind is to firm the soil, and the same work that brings about this condition will make it fine on the surface. Sometimes there is a little advantage if a few lumps remain after the soil is worked into a fairly good condition; that is, after there is sufficient fine soil to cover the seed. These lumps afterwards are spread out on the surface by the action of frost and in this way cover up exposed roots during freezing and thawing weather.

After going to the trouble of preparing a good seed-bed it will usually pay to use a drill to sow the wheat. This insures a perfect covering of the seed so that all grain is uniformly germinated. Much less seed per acre is required in

about sowing the crop rather early, so that it will make a good top before winter. According to our observation winter wheat is, as a rule, sown too late. One need have little hesitation about sowing sufficiently early so as to obtain a growth of six or seven inches. This means that the root will be strong and the crop will mature earlier the following year than if it were seeded late and made but a small growth in the fall.

CUTTING OUT THE HEAVY LABOR.

In the very necessity of the case farmers are obliged to put in long hours, especially so during the time when crops are being put in, tended and taken off. This fact partly accounts for the difficulty that is now experienced in getting help on the farm. Men often feel irritated over the situation and they are led to deplore the fact that the race is degenerating, inasmuch as there seems to be an increasing tendency among young men to leave the farm.

Many theories are set forth as to how to counteract the movement from the country to the city, but in many cases these miss the mark. The practical solution of the problem is to make work on the farm as agreeable as it is in the city, and the farm will hold its own. We see no possibility of always having the regular hours of labor on the farm that are employed in the city, nevertheless great improvements may be made along this line. It is up to each individual farmer who keeps hired help to

interest on the \$3,500 indebtedness, and in addition pays for the service of one man by the year and an additional man during certain months of the year, we think there is some risk to run about anything being left over for the owner at the end of the year. Then, something depends upon the productiveness of the soil. Where land will produce sixty or seventy bushels of corn it might be possible to carry a burden of this kind and yet realize some profit. If, on the other hand, one has to depend on wheat or small grain of any kind, there is small prospect of profit.

Our advice would be to try operating the farm in this way for one year. Land in the corn belt is bound to increase in value, and even should the owner not make more than expenses, a fair profit might be realized as a result of appreciation in land values.

LUNG WORMS OF SHEEP.

BY A. S. ALEXANDER, MADISON, WISCONSIN

We are in receipt of the following letter from an Iowa farmer:

I have 385 sheep, of which 176 are lambs. For some time back the ewes have not kept in as good flesh as I thought they ought, but as they were a little short on pasture I paid no particular attention to the matter. Shortly after being shorn they commenced to cough a great deal and to run at the nose. But as the weather was wet I thought they had caught cold or had an epizootic of some sort and so paid little heed to the trouble. They seemed to get no better, although the discharge from the nostrils has dried up to a great extent. I have lost five or six (all ewes) and will probably lose some more. No lambs have died, but, judging from their cough and respiration, they are troubled with the same disease which I find, by dissecting two ewes that died, to be lung worms, which are small, thread-like worms from one to three inches or more in length, white in color and all through the lungs. Part of the pasture is wet and the sheep have drunk slough water more or less. I presume this had something to do with the cause of the trouble, but I can hardly get another pasture and others here have used similar pasture without fatal results. Now, I would like to know if these worms will increase from now on until many of the sheep die or as weather gets drier will the mortality be less? I have been told to fumigate the sheep, but it is quite a task, more, in fact, than I have time for, nor have I a suitable building. Please advise how to treat the trouble, as this is something sheep have not been troubled with before in these parts.

The disease described is known as "verminous bronchitis" and is caused by a thread-like worm termed "strongylus filaria" by scientists. The eggs of this parasite are picked up by the sheep and lambs on low, wet tainted pasture that long has been used by adult sheep. The eggs pass from the body in the manure which dries and becomes spread out so that the eggs are set free to become attached to the blades of grass close to the roots. While adult sheep may be badly infested by these worms they do not always cause death but lead to a distressing cough and some emaciation. There can be little question, however, that the adult sheep carry the parasites for many months at a time and reinfest the pasture in spring as is the case with the "stomach worm" of sheep, technically known as "strongylus contortus."

Evidently then, prevention of the disease is to be sought by keeping lambs off low, wet, tainted pasture and away from adult sheep. This is the grand principle which it is necessary to follow closely in the management of a flock of sheep and as calves are similarly affected by a lung worm, known as strongylus micrurus and which is acquired in an identical way what applies to the management of sheep is equally true of the management of young calves.

In the case described by this correspondent there is no doubt that the worms were derived from the low, wet pasture and from adult affected sheep and while the disease will become less prevalent when the weather becomes dry and the pasture grasses wither it is certain that all affected lambs will be likely to die unless properly treated and especially well fed on a generous ration of oats and bran along with nutritious green stuff. The generous feeding is of the greatest importance in dealing with parasitic troubles of lambs and sheep. The parasites sap the blood and strength of their hosts and unless the latter are well kept up by good feeding they will speedily become emaciated and succumb. It is quite possible by the feeding advised to keep sheep and lambs in fairly good shape despite worms until the latter are naturally gotten rid of and in the case of lung worms the period of attack lasts from three to four months but the lambs may soon become reinfected if exposed to the necessary con-

ditions. That good feeding offsets parasitic infection is proved by the fact that thousands of sheep are affected with "nodular disease of the intestines" (knotty guts) due to the presence of a worm, yet do not show it until they are slaughtered. On the contrary, sheep affected by nodular disease emaciate or suffer from constipation, sometimes fatal, if kept upon poor pasture without additional nutritious food.

Symptoms.—Verminous bronchitis may be detected by the following symptoms: The sheep or lamb affected has attacks of distressing cough which threaten suffocation. The spells of coughing are similar to those suffered by a child affected with croup. Great difficulty in breathing is noticed and the sheep frequently rubs its head against the ground. Soon the patient becomes emaciated from lack of blood and in this condition has pale membranes and skin. The condition can readily be detected in parasitic disease by turning back the eyelids to expose their lining membranes which will be found pale in color (bloodless) if parasites are sapping the system. In bad cases the skin becomes papery and the wool tends to drop out; the breathing becomes hurried, there is a discharge from the nose in which it is sometimes possible to find the live parasites, the animals droop, quickly lose strength and die. The parasites may also occupy the intestines and in that case cause purging but as a rule where this is seen the disease is complicated by the presence of stomach worms. The disease is worse in prolonged spells of wet weather and is little seen in periods of comparative drouth.

Treatment.—The most successful method of treatment is to inject medicine directly into the windpipe by means of a hollow needle thrust between the rings of the trachea and attached to a syringe containing the medicine. An ordinary veterinary hypodermic syringe provided with a long, strong, hollow needle is suitable for the work and may be obtained from any dealer in veterinary instruments or through any druggist.

The following solution will be found effective when used with the hypodermic syringe in windpipe: Take iodine, half dram; iodid of potash two and one-half drams; distilled water three ounces. Mix this solution with two ounces of turpentine and six ounces of olive oil well shaken together. The dose of this mixture is two drams (teaspoonfuls) which are to be slowly injected into the windpipe by means of the hypodermic syringe. Repeat the dose in two or three days and again as required according to severity of case.

Gasoline or turpentine also may be given internally with good effect as so often advised here for the destruction of stomach worms. Allow free access to salt and if lambs are weak mix in their feed once daily a teaspoonful for each lamb of a mixture of equal parts dried sulphate of iron, ground gentian root and flowers of sulphur. Avoid close cropped grass and allow access to well grown rape and other tall green plants used for sheep. A liberal dressing of crushed rock salt to infected pastures is said to lessen the danger of worm invasion.

NAMING PURE-BRED STOCK.

A subscriber from LeMars, Iowa, sends the following communication:

I would like to ask what course a man who is in the pure-bred stock business should pursue in the naming of his animals. Are there any rules, framed by the record association governing that part of the business? Must a family name or that of the sire be maintained in any strain of live stock? I know others who will be glad to get light on this subject beside myself.

There are no special rules that apply to the naming of pure-bred animals. Family names may often be employed and the only restrictions that there might be in this case would be found in the matter of duplication. The secretaries of the various associations, however, will see to it that no animal is given exactly the same name as one that is already recorded. Some people seem to take delight in choosing homely names for animals, while others are specially strong in the selection of long names, the writing of which involves much labor. We think that it is possible to err in the direction of brevity, but at the same time it is the best way to err. It is not necessary to keep up the sire's name or any name that has ever been used before. Sometimes the blending of part of the sire's name and part of the dam's may, when applied to the offspring, give the youngster a good start

in life. Where sires are particularly noted it is generally a wise thing to maintain at least part of the sire's name. Take the great show bull, Choice Goods, for example. To name a choice calf by that sire Kruger would show a poor sense of the fitness of things, especially when you have access to such words as Choice Goods Prince, Choice Goods Duke, etc. Possibly the best thing for one to do who is beginning along this line is to take up a number of good catalogs and formulate your ideas after making a close study of these. Our best breeders aim to select pleasing and meaningful names.

A SUCCESSFUL LIVE STOCK BREEDER

If the factors that make up the sum total of a successful man's career are of interest to the wide-awake public, there need be no apology offered in presenting a brief outline of the life and work of Mr. Martin Flynn, of Des Moines, Iowa. His has been a somewhat notable career, inasmuch as it has been marked by wisdom and abundance of energy throughout.

As a lad of nine years he came to this country from Ireland, in 1849. Thrown upon his own resources he started at once at the lowest round in the ladder in railroading, acting in the capacity of water-boy. At that tender age he literally hitched his wagon to a star. The water business was good to start on, but something better was in sight. At ten he turned his attention to stone-breaking for the railroad company and soon became an independent contractor, who utilized boy labor.

In a few years the Flynn boy graduated with honors from stone-breaking and took up the work of railroad construction, beginning on the Iowa division of the Chicago & Northwestern. Hundreds of miles of road-bed along this line as well as on the Union Pacific, Rock Island, Burlington, and Santa Fe stand as a monument to the industry of this now famous breeder of Short-horn cattle. By instinct and experience Mr. Flynn was an unusually practical man—one who could turn his hand to any form of labor, though this was combined with exceptional executive ability. The result was he prospered—grew wealthy in fact. And his profits, where were they invested? In land—to the permanent enrichment of corn-belt agriculture and the live stock industry of the West. His acreage accumulation increased until Walnut Hill Farm, eight miles from the city of Des Moines, includes an area of 1,515 acres of ideal crop and pasture land. With the purchase of land Mr. Flynn began investing in Short-horns, his herd increasing year by year until it now numbers five or six hundred head. His interests also increased in other directions.

He organized the Peoples' Bank, of Des Moines, and became its president, which office he still holds. In addition, he engaged in the manufacture of brick on an extensive scale. But Walnut Hill Farm and the Short-horns were the pride of his heart, though his time until within the last few years was largely taken up with other matters. The responsibility of affairs on the farm for many years fell on other shoulders, but no department suffered because of that. Mr. Flynn's success as a contractor was only matched by the able manner in which things were brought to pass on the farm, the credit there being entirely due to the splendid efforts of Mrs. Flynn—to whom no one is more generous than Mr. Flynn in the giving of credit. A family of ten children came to the home, and today five stalwart sons are taking an important part in the management of the extensive Flynn interests. A recent incorporation has placed everything under the control of the Flynn Farm Company.

Although the strenuous years of Mr. Flynn's life did not associate him with the live stock industry, yet it is his record as a breeder of Short-horn cattle that stamps his name on corn-belt history. A man abounding in common sense and with almost unerring judgment, it was but natural that he should forge to the front when he took up in earnest the breeding of cattle. He became a close student of pedigree and has always been fearless in his method of mixing blood lines, without regard to the effect on pedigree. To improve the animal was his aim always, and the results attained have more than justified the means. Mr. Flynn stands today at the very top as a breeder of "good cattle." His success has done much to correct the blighting effect of the pedigree craze, and because

This Keeps Lightning Out Of Your Telephones

This is our "No Risk" Lightning Arrester. Pull the knob, and your telephone is absolutely cut out. Lightning cannot enter your house.

Protects the house, avoids fire, insures safety for the family.

Simple; positive; sure. Book FREE.

Just send your name and address. Our book explains everything—how you can try the "No Risk" Lightning Arrester FREE. Or send us \$2.00 and get the complete arrester. Fully guaranteed to protect as we say or money back. Reliable Agents wanted. One man sold 15 one day. Another 35 in 5 days.

Edith Sutton, La Russell, Mo., was instantly killed May 31st by lightning while talking over country phone.

Forty country telephones were burned out at Beatrice, Neb. in an electrical storm June 5th.

Abner Hosking, Norway, Mich., was struck by lightning June 6th while standing near his country phone.

Atlantic, Iowa, June 24.—Lightning played havoc with the rural phones in all directions.

All could have been prevented by using "No Risk Lightning Arrester."

W. E. ASHBY TELEPHONE CUT OUT CO.,
101 Square St., Chariton, Iowa.

of this alone his name will long be revered.

As a juror in the beef cattle ring no man stands higher today in the opinion of successful men than Mr. Flynn. His work in this line at the principal expositions has always borne the stamp of honesty and his decisions have always been the result of a discriminating judgment. There is no breeder of note today in America who would hesitate to compete in any company before a judge so fair and honest as Mr. Flynn. Although creeping along to the western horizon of life, he lives in the present. He fails utterly to grow old-fashioned, and especially in his ideals as to what constitutes a good animal and the methods that should be employed to produce same. He has been somewhat of a stickler over the use of good sires, not only in the advice he offered to others, but as applied to the improvement of his own herd. Although a keen student of pedigree, yet the animal itself had to be there always, as before stated, and his herd today plainly shows the effect of practicing this doctrine. There are many well posted men who hold the opinion that the Flynn herd of Short-horns is the most useful "breeding" herd in America today. To start in as a water-boy at nine and reach this distinction before the mark of three score years and ten is past is success, and confirms the sentiment expressed in the title above—"A Successful Live Stock Breeder."

This issue of the Homestead was ready for press when word was received that Mr. Flynn died suddenly on the morning of Wednesday, July 18th. For some time his health had been failing, though it was not realized that the end was so near. The story of his life as given above was prepared without the slightest suggestion that his health was so undermined. We know that thousands of his friends throughout the central West will receive in sorrow the news of the death of this stalwart pioneer.

The serial advertisement, or continued story, of The Litchfield Mfg. Co., which has been running in The Homestead now for a number of months, this week offers some fine Indian subject engravings in strong, beautiful colors, with a view of getting a little direct information from our readers. These are offered absolutely free and will be sent postpaid. We trust our readers will take advantage of this proposition, that as many of these pictures as possible may be distributed with our patrons. Read their advertisement on page 5.

CHICAGO AND RETURN					
\$8.00	\$8.00	\$8.00	\$3.00	\$3.00	\$3.00

On August 4th, 5th and 6th, the Chicago Great Western Railway will sell special round trip tickets from Des Moines to Chicago and return at rate of \$3.00. Tickets will be first class in every respect and have limit for return of August 15th. For full information, apply to E. J. Sawyer, 514 Walnut St., Des Moines, Iowa.

FISHING AND CAMPING.
Tickets are on sale daily to Madison Lake, Waterville and Elysian, Minn., via the Chicago Great Western at rate of one fare and one-third for the round trip. Full information from E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

NEW ENGLAND AND CANADIAN POINTS.
The Chicago Great Western Railway will sell round-trip tickets to the above points at very low rates on certain dates this summer. It will pay you to call on city ticket agent, 514 Walnut St., Des Moines, Iowa.

Farm Furrows

Turned by a Practical Farmer.

A man makes a mistake when he depends on a scrub bull to head his herd of cows.

One very good way to get one's nose down to the grind-stone is to stick it into other people's business.

There is more clean corn ground this year than usual. The cultivator cannot do its best work when rains are plentiful and abundant.

A man is quite liable to make a mistake when he attempts to grow three crops of corn in rotation. This is taking a step backward.

With the hay loader and the horse hay fork hay ought to go into the barn rapidly. When hay is cured it cannot be put away too fast.

"You say, Sam, that your friend was utterly prostrated by a mere case of mistaken identity?" "Yes, he mistook a toadstool for a mushroom."

In shocking grain the bundles must be set down in a vigorous manner or they will not stay. It is surprising what poor shockers we have on farms.

It has been many a year since there has been as large a crop of cherries as we have this year. I saw many baskets of cherries of twenty pounds selling at fifty cents each.

An authority on such matters claims that one-fourth of the hay crop comes from wild grass. It is a notable fact that of the wild grasses used for hay in the United States not one variety has been brought into cultivation.

Have you ever tried having summer collars for horses in summer and winter collars for winter? It is a good plan and leads to fewer sore shoulders. Horses' shoulders are not the same shape or size in winter that they are in summer.

A friend of mine who has been visiting in his old home, Maine, says there are many ox teams at work in that state. He says the rocks seem more plentiful and have grown to be mammoth in size since he was a boy in that state.

A new milker will not get as much milk as the one to which the cow has been accustomed. A cow has some rights that are to be respected. Whether she has or not she usually assumes the right to withhold her milk when she has a new milker.

I know a hired man who is up-to-date, and he commands the highest price for his labor. He takes a farm paper and keeps posted as to what is going on. His employer does not take a farm paper, and is willing to pay him for his information and experience.

No decided improvement has been made in the past twenty years in cooking for harvest hands or thrashers. The cookstove is just as hot now as it was then. The kitchen duties are just as laborious and withal the housewife's duties are very much the same.

A bill has been introduced in the German law-making body requiring automobilists to pay life annuities to those dependent on persons killed or permanently injured by motor cars. Owners of machines are held responsible and not chauffeurs. Well, that seems to be all right.

Too often do we lose sight of the value of sunshine, especially in regions where it is abundant. It is one of the great factors in producing crops and is also an essential in the early life of young stock. There is such a thing as having too much rain, but we can scarcely get too much sunshine.

I would go a great ways to see an old fashioned thrashing outfit at work. I remember that all hands had to be called to assist in unloading the horsepower, and the athletic boys of the neighborhood were called into use in driving the stakes. No self feeders, no straw stackers, no weighers or other improved attachments then graced the machinery. Men were called upon to do all within their power and progress was

slow enough. This age is too fast for that equipment.

The farmer who broke his hoe handle leaning on it was leaning on the wrong thing.

Two very good ways to market farm crops may be found in the pig skin and in the milk can.

There is a weed called "live-forever." It is claimed that some experiment stations have found a disease that, when introduced, will kill this well-known plant.

It never pays to be a next year farmer, and yet it pays as well as it does to be a last year's farmer. Don't put off any farming for tomorrow that can be done today.

The first riding implement I saw I made this remark: "When I have to ride while farming, I'll quit the farm." I afterward repented and now I have all riding implements. Can't get too many of them.

For a number of years we have had our first mess of new home-grown potatoes on June 17th and our first roasting ears on July 10th, but this year we have been able to clip off a few days of the record; had both before the dates mentioned.

Not every rich field will produce good crops; not every trotting bred horse will trot; not every drafter will escape the barbed wire; not every banker is honest; not every bright thing that glitters is gold; not every church member is a Christian.

For several years we have not heard so much of surface cultivators. I believe somewhat in surface cultivation, but there are conditions when it is not the thing. This has been a glorious season for the use of surface cultivators of various kinds.

One practice that has been so neglected as to almost be given the name of a "lost art" should again be revived. It is that of stacking grain. There are too few farmers who can build a stack of grain that will keep. The reason is easy. Thrashing from the shock does the damage.

A great many good things have to be introduced with difficulty. Some years ago when the silo was being introduced there were many that made fun of the "corn kraut," as they were pleased to call silage, but now there are many who cannot understand why there are not more silos.

Whether building a stack of grain with a fork or "kneeing" every bundle, one thing necessary is to keep the middle well filled. If this rule is followed there will be but little grain spoiled. After one has reached that point above the "bulge" it will be well to keep the middle quite full.

The Iowa weather man, Dr. Sage, says he went to the country to get away from the popping of the firecrackers and the corn was growing so rapidly that the popping of the corn kept him awake after all. He is quite patriotic, but he says the popping of the corn sounds better to his ear than the popping of firecrackers.

Nowhere does organization count for any more than it does in a thrashing club. Such clubs are advantageous in that their members know who is going to help, and when they are to have their work done. There are no laggards and every man has an interest in the work that is being done whether at home or at a neighbor's.

A lady friend writes me: "I sometimes see reference in papers made to the 'hay box.' Will you kindly let me know what is meant by it?" A "hay box" consists of a box or a keg stuffed with hay so as to retain the heat of a closed vessel containing partly cooked food. The food is boiling when placed in the box and the heat thus retained finishes the cooking.

Circus day makes a good time to cultivate corn. I know, for I have tried it. Once upon a time there was a circus in a town near my place, and all my folks (boys and all) went. The whole neighborhood went and I seemed to be the only person that was not at the circus. I was as lonesome as I could be and had to work hard to keep from collapsing. On that day I cultivated

THE NEW MOLINE THE IRONCLAD WAGON!!

Five hundred men, masters of the wagon-maker's craft, put the best efforts of their hands and brains into the making of New Moline Wagons.

With its gearing of select Hickory and tough White Oak and its box with Yellow Pine Bottom, grooved and matched, the New Moline Wagon has a foundation that will last for years.

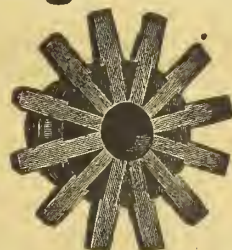

It's so strongly reinforced with extra heavy iron throughout, that farmers call it the "Ironclad" Wagon.

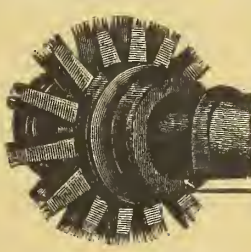

Pole, doubletrees, singletrees, gearing and box are so thoroughly protected and strongly braced with heavy ironing that its solidity and durability defy the test of time.

Its dust-proof skeins keep out every particle of dust and dirt.

Lightest Running Wagon in the World

Section Hub and Spokes.
Practically One Solid Piece.

Note Dust-Proof Skein.

The New Moline is built right, from the ground up. It's a light-running Wagon, and the longer you use it the better you'll like it, for it's got more up-to-date features, and gives more years of satisfactory service than any ordinary wagon. We've been perfecting this wagon since 1854.

We fully guarantee every New Moline Wagon that leaves our works.

The demand for New Molines is enormous—taxing the full capacity of our immense factories.

GET THIS BOOK! We want every farmer to have a copy of our wonderful Wagon Book. It don't make any difference whether you are thinking of buying, or not—send for it anyway! It tells just how the genuine "Ironclad" Wagons are made. Shows all the parts SEPARATELY; and you can SEE how they are IRONED and BRACED and DOUBLY REINFORCED, making THE NEW MOLINE the most durable as well as the lightest-running wagon on earth. The book tells you more about a wagon than any other Wagon Book in existence. It is FREE, postage prepaid by us.

SHULL BROS., GARDEN CITY, KAN.

eighty-eight rows of corn eighty rods long, something that was seldom done in that particular field.

The fairest boss a hired man can have is the one who works along with his man, for he has an idea what work is and how much ought to be performed in a given time. No one who does not work can be in sympathy with labor. The hired man of today is better paid than any other laborer of like character.

With the old fashioned four shovel cultivator I have cultivated through patches of morning glories and the vines would creep up on the gangs and finally fall off to establish new colonies and to create further trouble. One ought never to carry a vine out of the patch where it grew unless he believes in propagating them.

A magazine article gives instruction how farmers' wives can earn some spending money during their leisure moments. The leisure moments of haying, harvesting, thrashing, canning, preserving, butter-making, chicken-raising and garden-making season of the year is liable to flood the markets with the products of leisure moments.

The effects of an idle life are terrible in their destruction of the morals of men and women. Idleness is not so common on the farm, and for that reason more good citizens come from the farm than any other place. Wealth and idleness have ruined many a promising young man. Every man who has children, be he rich or poor, should remember the dangers that beset the idle.

Subscribers who handle sheep will be interested in a communication which appears in this issue on the lung worm by

Dr. A. S. Alexander, of the Wisconsin Experiment Station. Dr. Alexander is recognized as an expert in the treating of animal diseases, and what he says on the lung worm brings the matter up to date. We commend the especial attention of sheep breeders who farm low lands.

A friend asks me the origin of the name of timothy as applied to a variety of grass. The common belief is that the name was given this species because it was introduced and extensively cultivated by Timothy Hanson, a farmer of Maryland. This species is well known in England and all over western continental Europe. In Great Britain it is known as catstail grass and in our eastern states it is sometimes given the name of herd grass.

NEW HOMES IN THE WEST—SHOSHONE RESERVATION TO BE OPENED TO SETTLEMENT.

Chicago & Northwestern Railway announces round trip excursion rates from all points July 12th to 29th. Less than one fare for the round trip to Shoshoni, Wyoming, the reservation border.

The only all rail route to the reservation border.

Dates of registration July 16th to 31st at Shoshoni and Lander. Reached only by the Chicago & Northwestern Railway.

Write for pamphlets, telling how to take up one of these attractive homesteads.

Information, maps and pamphlets free on request to S. F. Miller, Assistant General Freight and Passenger Agent, C. & N. W. Ry., Omaha, Neb.

HOMESEEKERS EXCURSIONS.

The Iowa Central will sell round trip excursion tickets every Tuesday to points in Minnesota, Wisconsin, the Dakotas, Manitoba, Saskatchewan and the Canadian Northwest, and on the first and third Tuesdays of each month to points in the South, Southeast, West and Southwest. Rate one fare plus \$2. Liberal limits and stop-over privileges. For rates and further particulars call on agents or address A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

CONTROLLING THE CORN BILLBUG AND CORN ROOT-LOUSE.

Corn billbugs and the corn root-louse have long been recognized as serious enemies of corn throughout the greater portion of the corn belt. For several years S. A. Forbes, Illinois state entomologist, and his assistants have been working on corn insects in general and on practical methods of controlling these pests. In a recent study of such species of corn billbugs as breed in grasses it was found that in badly infested timothy fields from 50 to 75 per cent of the timothy bulbs were injured to some extent. In fields which had been in timothy only two years the bulbs were infested to the extent of 10 to 20 per cent. It was found that at least 33 per cent of hills of corn infested with these insects failed to form ears or filled out very imperfectly, some fields yielding only twenty to forty-five bushels per acre, where the yield should have been eighty bushels. In some localities as high as 29 per cent of the hills of corn were quite badly injured, the amount of damage naturally varying according to the nearness of the field to old centers of infestation by this insect.

The observations made on corn billbugs showed clearly a great contrast in the extent of infestation between corn grown on timothy sod plowed early in the fall and that plowed only a few days before planting. A direct test of the value of fall plowing in the control of these insects showed that the injury from corn billbugs is due almost entirely to planting corn after timothy and upon spring plowing, and conversely it appeared that the injury could be effectively prevented by early fall plowing of the timothy sod. All insecticide methods of this kind recommend themselves incidentally to farmers, since the practice of fall plowing may be beneficial from a cultural standpoint and is easy of application.

Likewise with the corn root-aphis a successful cultural remedy was found. As may be generally known, this insect, like many other aphides, is cared for by certain species of ants. The ants construct their nests in the soil and care for the aphides the year round. Experiments were undertaken to determine the amount of benefit which could be derived from breaking up these ant nests by cultivation. On one farm it was found that where the soil was disked three times and harrowed once the number of ants and aphides was reduced by 92 per cent. In fact, in one instance the insects were reduced to the extent of 89 per cent by a single treatment of the soil with a disk harrow. The disking was done on May 22 and 23, after a heavy rainfall had occurred between the fifteenth and twentieth of the month. In general, it is recommended that fields in which it is intended to plant corn should be thoroughly disked in the spring as soon as the ground is dry enough to work. Attention is likewise called in this case to the fact that "the treatment most effective for the destruction of the root aphis and its attendant in spring is, in a great measure, that which will be found most useful as a thorough preparation of the soil for corn." This method will not entirely eradicate the corn root-louse, but will reduce the numbers to such an extent that the injury from it will hardly be of economic importance.

The Litchfield Mfg. Co. are offering to give away sets of finely engraved Indian subjects, absolutely free of charge. Read their advertisement on page 5.

CHEAP R. R. RATES VIA M. & ST. L.
Every Tuesday homeseeker round trip tickets to Minnesota, North Dakota and Canadian Northwest, also first and third Tuesdays to Montana, Washington, etc., at one fare plus \$2.00.

Summer tourist round trip rates to Minneapolis and St. Paul, also to points in Minnesota and North Dakota on sale daily after June 1st, return limit October 31st.

Special round trips daily June 1st to September 15th to Portland, Seattle, San Francisco and Los Angeles.

For particulars call at the M. & St. L. ticket office, 512 Walnut St., Des Moines, Iowa.

\$5.95 TO MINNEAPOLIS AND RETURN
Via Chicago Great Western Railway, account G. A. R. Encampment August 13th to 18th. Tickets on sale after August 11th. For further information apply to E. J. Sawyer, City Ticket Agent, 514 Walnut St., Des Moines, Iowa.

SPECIAL EXCURSION RATES TO COLORADO, UTAH AND THE BLACK HILLS,
Via the North-Western Line. Beginning June 1st excursion tickets will be sold daily to Denver, Colorado Springs, Pueblo, Salt Lake City, Hot Springs, Deadwood, Lead and Custer, S. D., etc., good to return until

October 31st. Specially low rate round trip tickets to these and other points, with favorable return limits will be sold the first and third Tuesday of each month until September 18th, inclusive. A splendid opportunity is offered for an enjoyable vacation trip. Several fine trains via the North-Western Line daily. Apply to agents Chicago & North-Western Railway.

MAKES SPORT FOR ANGLERS

Government Plants Trout By the Millions.

DENVER, Feb. 15. — A statement just issued shows that over 7,000,000 young trout were planted by the Government in Colorado streams during 1905.

For a number of years fish in the mountain streams have been increasing in great numbers.

The United States Government and the State hatcheries each year plant a hundred times more fish than are taken out by hook and line.

STACKING GRAIN.

BY ANDREW BOSS, MINNESOTA EXPERIMENT STATION.

In the grain-raising sections of the middle Northwest, the matter of stacking is perhaps of more importance than many farmers believe. Where grain of high quality is desired for either market or seed purposes, it is possible to secure a much higher grade through stacking the grain than can be secured where thrashing from the shock is resorted to. It has been estimated by some that standing in the stack for six weeks or three months will raise the quality of the wheat one grade. This has been demonstrated to be true under certain conditions, though the claim is not made that it would hold in every instance. Barley that is slightly colored is somewhat whitened in the stack, and since grain must sweat either in the straw or bin, it is much safer to let it go through this process in the stack. If grain is to be stacked, it is important that it be stacked well, or the desired increase in quality will not be obtained. Poorly stacked grain is even worse off and liable to more damage than grain in well-built shocks.

In starting the stack, much the same method should be followed as in building a large round shock. The important conditions are: First, to keep the heads of the bundles of grain off the ground, thus preventing loss through wet grain. Second, to build the stack true and round, that the heart of the stack may be in the center, and danger of swinging or settling to one side reduced. Third, the center of the stack should be kept full, though during the first five or six feet in height it is not absolutely necessary that the center be kept uncomfortably full. In stacking, much loose stuff is always raked up around the wagons and stacks, and this can best be disposed of in the bottom of the stack, and should always be piled in the center, with a row of good bundles around the outside. In building the butt of the stack, it is highly important that every bound bundle should be laid with the head of the bundle pointing directly towards the center of the stack. If this point is deviated from to any extent, there will be much trouble from bundles slipping out and rolling when stepped on. The first five or six feet in height should be kept comparatively solid, and while walking on every bundle is not always advisable, it will help materially in settling the stack into good shape.

An important point in stacking is to build so as to prevent the stack swinging as it grows higher. Keeping the bottom solid and the courses level will do much to obviate this difficulty. In the bottom of the stack and until the drawing in point is reached, the bundles may be lapped just as much as is necessary to give the proper slant to the stack. If a steep center is desired, lapping the bundles clear out to the bands will raise the center. If the stack becomes too steep, the center can be lowered by lapping the bundles just over the heads of the row preceding. The steepness of the center and the lapping of the bundles in the bottom of the stack are not so important as keeping the stack level, the heart full and the bundles packed solidly together. The bottom of the stack should be regarded as the foundation, and if properly built, it will support the top without swinging. The top of the stack, if properly put on, will protect the foundation and keep the water out unless it is of faulty construction.

In stacking with a fork, especially, it is important that a generous bulge be built on the stack. This should commence when the stack is four or five feet high, building it up straight to that point.

By turning the long side of the bundle up for four or five courses, it will give a gradual bulge to the stack, which is in no danger of slipping out, if the bundles are carefully and properly placed. The best results will usually be obtained where the butts of the bundles in each row are placed half way between the heads and bands of the row preceding.

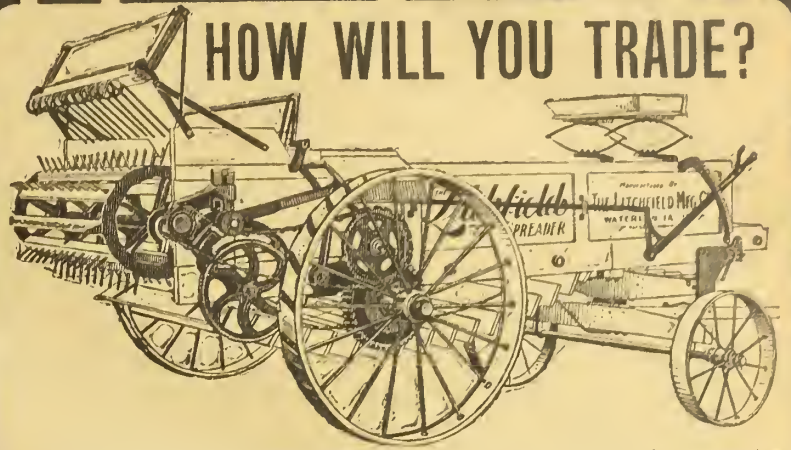

Before reaching the drawing in point, the center of the stack should be raised considerably. The drawing in point marks the shoulder of the stack, and it is at this place that more damaged grain results than any other part of the stack. The object of raising the center of the stack before drawing in is to give an opportunity to raise the heads of the bundles at the shoulder of the stack and run the water out over the bulge where it can fall clear off the stack to the ground. Instead of letting each row of bundles out near the bands, as was the case in the bottom of the stack, it will be necessary to let the butts of the second row of bundles lap just over the heads of the bundles in the first row. The bundles in the third row should be placed about four to six inches inside of the butts of the bundles in the second row, thus providing a solid place for the heads of the outside row in the next course and raising them sufficiently to carry off the water. From the third row to the center of the stack, the bundles may be placed with the butts just reaching the bands of the row preceding. As soon as the turn is made and drawing in started, the long side of the bundles should be placed down, thus drawing in the stack gradually and giving it a smooth surface which will not hold water as it falls. This method of laying the bundles should be followed as closely as possible from the drawing in point until the stack gets too small for three rows of bundles. The balance of the stack may be finished in almost any way that will permit the bundles to be laid smoothly with the heads pointing up.

The very top of the stack is not nearly so important as that part just above the drawing in point, and even if it becomes slightly wet, will dry out. The important consideration is to so fill the center and slope the bundles on the out-

side that any water that should penetrate for a little distance will run out just as on a shingled roof.

While each man who stacks grain will gradually develop a method of his own, it is believed that if these general suggestions are followed, but little damaged grain will result.

As a matter of convenience in stack-

HOW WILL YOU TRADE?

TO find out just how many readers of The Homestead have been perusing these weekly stories and who may be interested, we propose to ask every reader to at least drop us a postal card.

Will you tell us if you expect to be in the market for a spreader (a good one)? If you are not expecting to buy a machine at some future time, will you extend us the courtesy of such information as you may have about others who are?

We do not want something for nothing, but if you haven't the time, just let the son or the daughter make up a list of all the friends or acquaintances you have who are considering the purchase of a spreader. Please give names and addresses plainly written.

We want to trade with you and for these names we propose to give you a set of Indian pictures that are worthy of a position anywhere. These are 8x10 inches (unmounted) and cover different Sioux, Ogalalla, Brule and Crow subjects.

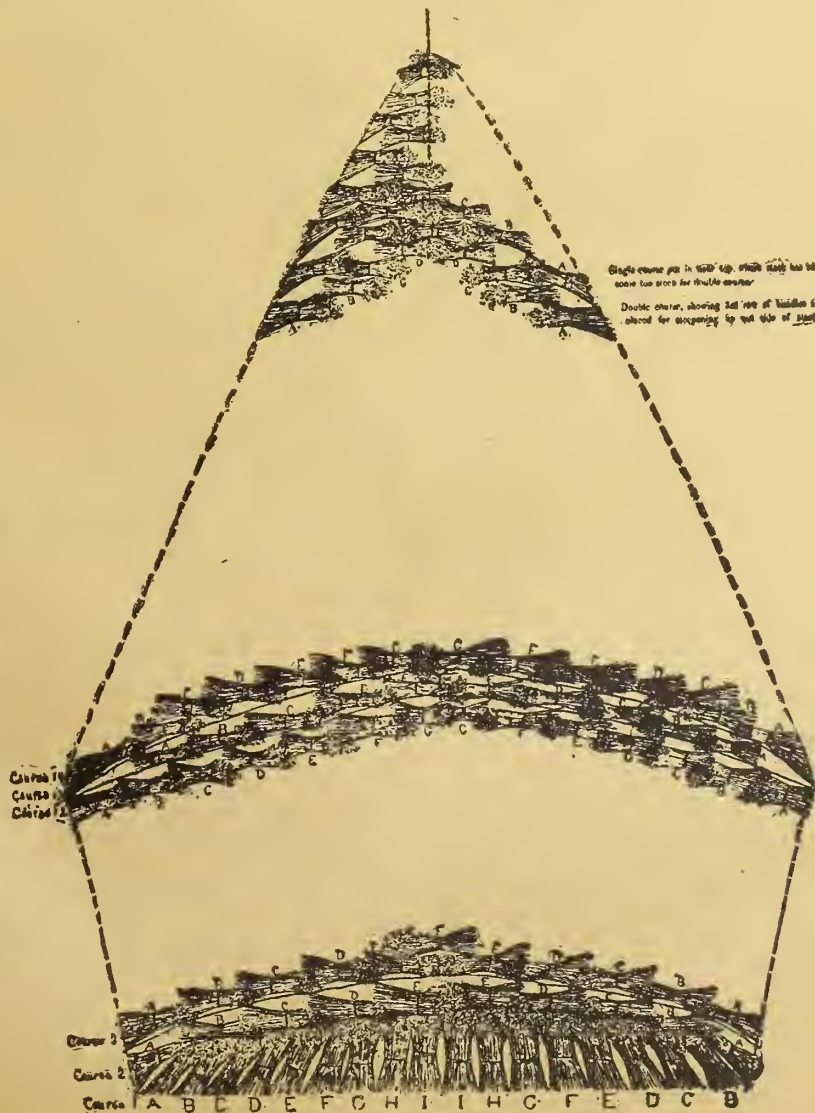

We will appreciate a very full and complete list of your acquaintances who are going to buy and will return the favor promptly. Write now, before you forget it, and help the good work along. A spreader that is guaranteed for five years and sold as cheap as we sell the Litchfield is something that your friends ought to know about. A machine with all the modern, up-to-date ideas and improvements, such as are embodied in this 1907 spreader (now ready for the market) will do your friends good, make them money and they will thank you for putting them in touch with such a machine.

We wish to hear from just as many of our readers as possible this week and if you are in the market please give us this information and also give us the names of as many others as possible. We want to trade these elegant Indian subjects for information and will "trade fair."

It makes no difference what part of the country your acquaintances may be in, as we sell the Litchfield Spreader in all parts of the United States. Our 1907 machine, which is now ready for the market, will be placed with those customers who desire it this fall and is a "winner" to the trade. It exceeds by far any other spreader that has ever been offered and is doing this on its own strength and its own merits.

Ask us any questions you desire and they will be cheerfully answered and we will give all information that may interest you. Write at once and read this space next week.

THE LITCHFIELD MFG. CO., P. O. Box A388, WATERLOO, IOWA

HOW SHEAVES IN STACK ARE PLACED.

ing and for the protection of the grain, fork stacking is strongly advised. In building the bottom of the stack, it is permissible to walk on every bundle as laid. After beginning to draw in, the stacker should not step on the first and second rows of bundles. From the third row in, however, the solidier they are packed, the better. The center of an ordinary-sized grain stack will be eighteen or twenty feet in height. The weight in the center, therefore, is much greater than on the outside at the bulge, where it is only eight or ten feet in height. The center will, therefore, settle much more in proportion unless kept packed more solidly. The bulge of the stack permits the outside to settle in proportion to the center and maintains the proper slant to bundles throughout the stack. It is for this reason that fork stacking protects the grain better than the old-fashioned method of stacking on the knees. In addition to the benefits in protecting the grain, fork stacking is easier on pitcher and stacker, which is a point well worth considering.

SUMMER VACATION IN COLORADO. LOW RATES VIA ROCK ISLAND LINES.

Colorado, as a place for recreation, is the choice of many thousands of summer tourists.

Colorado is a land of clear, pure air and golden sunshine. It is a land of sparkling mountain streams and glassy-surfaced lakes. There are more enjoyable things to do, more grand sights to see in Colorado than any other place under the sun.

From June 1 to September 30 Rock Island Lines will sell summer tourist tickets at rate of \$21.75 from Des Moines, Iowa, to Denver, Colorado Springs or Pueblo and return. Return limit October 31. July 10 to 15, inclusive, the special round-trip rate of \$19.25 from Des Moines, Iowa, is effective.

This latter rate is authorized on account of the Elks' Annual Meeting at Denver July 16 to 21. Tickets limited to return to August 20.

Very low rates will also be in effect to Glenwood Springs, Colo., Salt Lake City and Ogden, Utah, Yellowstone National Park and to the Pacific Coast, with cheap rates for side trips to nearby points of interest en route.

New and improved train service via the Rock Island is an important feature for the Colorado traveler to consider.

Full details of rates, routes, service and any information desired will be gladly furnished by the Rock Island Ticket Agent at 423 Walnut St., Des Moines, Iowa. Geo. R. Kline, C. P. A.

HOMESEEKERS' RATES.

Every Tuesday, via the C. & N.-W. R'y, until December, 1906, to authorized home-seeker points in Wisconsin, northern Michigan, Minnesota, South Dakota east of the Missouri river, North Dakota, Alberta, Manitoba, western Ontario and Saskatchewan. Full information at C. & N.-W. passenger station or 401 Walnut St.

SANDWICH

HAY PRESS

The Baler for speed. Bales 12 to 18 tons a day. Has 40 inch feed hole. Adapted to bank barn work. Stands up to its work—no digging holes for wheels. Self-feed Attachment increases capacity, lessens labor, makes better bales and does not increase draft. Send for catalogue. Sandwich Mfg. Co., 143 Main St., Sandwich, Ills.

CURRENT EVENTS AND COMMENTS

The revelations made by the investigating committee appointed to examine into the Chicago packing houses appeared to be especially revolting to the British people. Now comes the report that the inspector of factories in England finds conditions even worse than they were in Chicago. Dirty factories and disgusting methods were the rule instead of the exception, as was the case in this country. The inspection abroad dealt with bakeries, fruit factories, sausage plants, etc. It is surely a case where the pot cannot call the kettle black.

That there were rank extravagances in the management of insurance companies before the period of investigation is indicated by the fact that the present management of the Mutual Life Insurance Company is making a daily saving of \$3,000 compared with the record made one year ago. This is the result of reducing the salaries of officers and employees and also cutting down the expenses of the home office building.

State fair managers throughout the entire corn-belt are of the opinion that the greatest series of fairs in central West history will be held this fall. Entries compared with former records in nearly all classes are much more numerous. Crop prospects at present also indicate that the attendance at state fairs will be of record-breaking character.

Secretary Wilson, of the department of agriculture, spent last week in Chicago, examining into the condition of affairs in the packing houses. Before leaving for the West he made the following statement:

I have met the inspectors in charge of federal reconstruction from the different cities of the country. They report that conditions are improving everywhere. I told them that inspection under the new law will be established immediately in those houses where the sanitary conditions which affect the food product justify it. I also told them that no inspection will be given to establishments where the sanitary conditions which affect the food product are now perfect.

President Roosevelt has recently had occasion to re-affirm the statement made at the beginning of the present term, to the effect that he will not be a candidate for office to succeed himself. His secretary, in response to numerous inquiries, was instructed to say: "The president meant exactly what he said on the night of his election, that he would not be a candidate again for the office. That statement is irrevocable."

Independent oil men are jubilant over the action of western railroads in their recent decision to assume pro rating arrangements with eastern railroads. This will have the effect of materially reducing rates on oil and its products from the eastern oil fields and refineries to all points west of Chicago. It is claimed that this will be an important factor in enabling independent concerns to compete with the Standard Oil Company.

Mayor Schmitz, of San Francisco, has recently had grave charges preferred against him by the San Francisco police commissioner. He has been charged with forcing saloons, restaurants and resorts to pay for police protection and immunity. One case is cited where a woman paid \$600 for the privilege of dispensing wine where the sale or giving away of liquor was prohibited.

Liverpool prices of meat have recently made considerable advancement, a fact that would indicate that American meats are bound to remain popular for

some time to come in spite of the revelations made by the investigating committee who examined into the packing house affairs. The fact that the seven cent mark was reached last week in the Chicago market indicates that there is a good outlet somewhere for pork products.

The supreme court of France recently announced its decision annulling the condemnation of Dreyfus without retrial. The effect of the decision means the complete vindication of Dreyfus, entitling him to restoration of his rank in the army as though he had never been accused.

Echoes From a Kansas Farm

By Henry Hatch

"Just two more rains at the right time and the corn crop will be made." We observe that most folks are always wanting either two more rains or two weeks of dry weather.

Is it best to ridge up corn at the last cultivation? As far as the crop is concerned, we never could see that it made much difference, but sometimes a lot of weeds can be smothered by ridging.

Since building room for hay, we have been able to get as much good feeding out of eight loads put in the barn as from ten stacked in the field. In an ordinary wet fall and winter, about two loads in each stack is spoiled or badly damaged.

So far this has been just as busy a season as any that has gone before, if the weather has been favorable for field work most of the time. More farmers are getting along without hired help than formerly, and are making more money by it, but at the expense of having no time to spare.

The packing house investigation is still a subject of interest, especially to the raiser of a large number of beef cattle. Just what the outcome will be, is hard to surmise, but the man who has fat cattle almost ready for market is wondering where the income will be, too. It seems that everything has worked against the cattle raiser for the past three years.

With harvesting, tame hay making and corn cultivating coming all at once, then grain stacking or thrashing and plowing coming right after, few of us have made much of an onslaught on the weeds around the buildings yet. We have kept the weeds down, or from making seed, around these buildings for ten years, still they are as thick each season. Where do they all spring from?

He who fights to the end is the man who wins, whether at farming or at anything. A man came here last spring and bought an eighty-acre farm. He put out forty-five acres of corn and had it all but laid by when the notion to sell took a firm grip on the wandering one. Farm, crop and all were sold at a figure that let the seller out even. He will land where he came from a little worse off than when he started. That forty-five acres of corn shows good for fifty bushels to the acre now.

One thing calls for another. If the farmers hereabouts are going into small grain raising as extensively as there is promise of, it will take more machinery. More self binders will have to be bought. This year many fields of grain stood until over-ripe because of lack of machines. Many took contracts to harvest 200 and 300 acres, and those who had to wait until the last lost by it. The man who expects to raise small grain should not depend upon others to harvest it.

There has not been a lick of road work done within five miles of this farm yet this season, as far as we know. There has been some of the money used in making grades in other parts of the township, but this corner has received none of it, though paying fully as much of the tax as any other section. Here is the flaw in paying road tax in money; one end of a township is liable to get it all. It seems hard to treat all alike in the matter of road making and repairing.

It has been a year now since we put in our water works system, and in this time it has not been a cent of expense to us. Besides a lot of our own hard

Five First-class Newspapers and Magazines for

\$1.25 a Year.

COMPRISING OUR MAGNIFICENT RED LETTER COMBINATION FOR 1906.

Delightful Reading Matter for the Farmer and his Wife, Sons and Daughters--Something Good for Every Member of the Family.

1. The Homestead, universally recognized as the foremost agricultural weekly published. Every issue worth the price of a year's subscription to the practical farmer.

2. The Chicago Weekly Inter Ocean, a large family newspaper of twelve pages, with abundance of fine literary matter, prose and poetry, reliable market reports, etc.

3. The Kansas City Weekly Star, one of the ablest general newspapers in the West.

4. The Farm Gazette, a monthly magazine of profitable agriculture, printed on fine, heavy paper, with elegant illustrations and a cover in colors.

5. The Homemaker, a delightful monthly magazine for farmers' wives, daughters and children; enlarged, improved and full of good things.

All of these valuable periodicals for the low price of \$1.25 a year, if ordered within a reasonably short time, as for sufficient reasons, we must reserve the right to withdraw this unusual offer at any time.

To secure this great bargain you must clip out the following coupon:

Date 1906.

Homestead Company, Des Moines, Iowa:

Enclosed find \$1.25, for which please send the following five newspapers and magazines for one year to my address: Iowa Homestead, Chicago Weekly Inter Ocean, Kansas City Weekly Star, Farm Gazette and Homemaker, as per your special offer to Homestead readers.

work, the whole thing cost us less than \$175.00, but it will not be long until it will save us that amount. The pond, the source of the water supply, is now full, which means plenty of water all through the coming winter. Ponds can be made an almost sure source of water supply if they are only dug deep. It is not the amount covered by water, but the depth of it, that tells.

How the weeks do fly! It will soon be time to think of corn cutting. Two and three years ago there was a good deal of prejudice against the corn binder, on account of its knocking off ears, but a few being injured in each county by the knife-sled cutters has done much to make the corn binder popular. We know of several who have been permanently injured by being caught in front of the knife on the sled cutter, or being thrown there by a quick jerk of the horse. We often hear folks say they never have yet been hurt with a sled cutter, just as if that made it safe for them to keep on with one, but just

once is enough, and no man can tell just what moment that "once" is going to happen. We have a sled cutter in the machinery shed, but it is going to stay there as far as we are concerned.

THE SKIM-MILK CALF.

Mr. Eugene Secor, writing in the Northwestern Agriculturist, gives the following views on the skim-milk calf:

If one were to judge by calves on a majority of farms, one would conclude that the only calf worth notice is the calf getting its nourishment in the way Nature provides. Calves that run with their dams usually are nice. They ought to be if the mothers give more milk than a goat. But that is not the only way to raise good calves. I am sure that as good ones can be raised by hand if one will only give the young things a little attention for the first few weeks. I have seen skim-milk calves that would weigh 800 to 1,000 pounds at twelve months, and the last six months of that period they would outgrow the calf that sucked and ran with the dam for six months.

But to raise good skim-milk calves they need intelligent feeding. The milk must not be warm one day and cold the next. The calf must not have two quarts one feed and six the next. The milk must not be sweet one time and sour the next.

There is more danger of overfeeding than underfeeding. When a calf runs with its mother it gets a little at a time and often, but it is not necessary to follow nature in this respect. Twice a day is sufficient. The calf must not have all it wants. It always wants too much. Two quarts are better than an over feed.

I have had good success in feeding two to three quarts and supplementing the skim-milk with a handful of flax meal. The calf may soon be taught to eat shelled corn and oats. I like corn better. Begin with a handful, increasing slowly as the calf gets older. I don't like to give them all they will eat. The get satiated and stop eating. I like to see them clean up everything. Then all the nice tame hay, clover, if you have it, that they will eat. You can raise a dandy calf by hand with a little attention.

I don't care if a calf never sucks the mother. Take it away at once. Feed new milk. A couple of quarts is enough until the mother's milk is fit to use. Put it onto skim-milk gradually, and add a little oil meal or some substitute for the cream removed until the calf gets to eating shelled corn. My experience has been with Short-horns, and I find them so intelligent that they will drink out of a pail without the finger the third or fourth feeding. Winter calves are preferable. One can get them to eating sooner, and by the time they should be turned out to grass they are about as good as yearlings.

We heartily agree with this writer in the statement that there is more danger of over-feeding than under-feeding. It is surprising after a calf is two months old what can be accomplished by way of making gain in the feeding of not more than three or four quarts of milk twice a day if, in addition to this, a liberal ration of grain is also used. It is some trouble to warm milk, but in our opinion it pays to warm it until the calf is weaned in cold weather and until the calf is at least three or four months old in warm weather.

We also indorse the idea that the young calf intended to be raised by hand should never suck the mother. Let it go for a period of twenty-four hours after birth without trying it with the pail and you will not lose five minutes' time in teaching it to drink.

COST OF REARING CALVES.

Mr. R. M. Washburn, Missouri State Dairy Commissioner, makes the following statement regarding the profit derived from veal calves by the too common methods employed:

It was a small gathering, a bad day and only five present. One of these was a slender boy of nineteen. He listened attentively and asked a few plain, pointed questions. We had been discussing the raising of calves running with cows, feeding skim milk and shelled corn. I had asked those present to be honest with themselves and test the matter. This boy went home and did so. His father, an intelligent, well-read man and a successful farmer for forty years, had never calculated the cost of raising a veal calf although he raised from fifteen to twenty-five a year. Several months ago this boy sent me his figures which are as follows: Those that ran with the cow. No. 1, made a net profit of \$1.73; No. 2, \$1.68; No. 3, a net loss of 33 cents, and No. 4, a net loss of \$1.84.

He had figured the butter fat consumed at the price paid at the local creamery and the milk at 20 cents per hundred pounds. On the four there was a profit of \$1.24.

The young man then tested the matter of making veal of skim milk and grain. No. 1 gave a net profit of 44 cents, No. 2, \$1.42. The calves were Short-horn-Holstein cross, ran with mother for three days, then were gradually changed onto skim milk and grain. The grain was corn, oats and speltz, equal parts, same as fed to milking cows. He says he is well enough pleased with this method to continue because it leaves the cows in so much better shape for continuing in the working dairy. If the calf is allowed to run with the mother for five or six weeks the mother usually becomes so much attached to her baby that when it is sold away the cow will cry and roam about for about a week holding up her milk and eating little. I have seen many cows injured and a few ruined by this unkind method of handling.

Certainly the practice of allowing the calf to run with its dam for three or

four weeks is to be condemned. It has always been our opinion that where this is done a cow will never come to her maximum capacity during that lactation period. Of course where the whole milk is fed to the calf considerable labor is involved, at the same time when one considers the effect on the cow we believe that it is profitable labor.

\$4.50 TO ST. PAUL AND MINNEAPOLIS.

The Chicago Great Western Railway will have a popular excursion from Des Moines to St. Paul and Minneapolis and return, leaving Des Moines at 9:30 p. m., July 28th, by special train at rate of \$4.50 for the round trip. Sleeping car berth rate \$1.00 and seats reserved in Special Coaches for ladies and gentlemen without additional charge. Tickets good to return on all regular trains leaving the Twin Cities Sunday and Monday following. For full information call on E. J. Sawyer, C. T. A., C. G. W. R'y, 514 Walnut St., Des Moines, Iowa.

SUMMER TOURIST EXCURSIONS

Via the Chicago Great Western Railway to points in Alberta, Arizona, British Columbia, California, Idaho, Montana, Oregon, Washington, and Mexico City. Stopovers and side trips allowed. Tickets on sale daily to September 15th. Final return limit October 31st. For full information apply to E. J. Sawyer, City Ticket Agent, 514 Walnut St., Des Moines, Iowa.

LOW RATE EXCURSIONS.

The Missouri Pacific Railway and Iron Mountain Route will sell round trip tickets to points in Texas and Louisiana for \$20.00 from St. Louis and \$25.00 from Chicago on the first and third Tuesday of each month. Proportional low rate will apply from other

points; also one fare plus \$2.00 to points in Indian Territory, Arkansas and Missouri, and \$25.00 from Chicago to Pueblo, Colorado Springs and Denver with limit of Twenty-one days except to points in Louisiana, Arkansas, Texas and Indian Territory which are limited to thirty days, stop-overs going and returning.

Mexico: Less than one fare for the first and third Tuesday. On certain dates, one fare, long limit, stop-overs going and returning.

California: One fare for the round trip on sale certain dates.

Hot Springs, Ark.: Commencing June 1st to September 30th, one fare plus \$2.00, good thirty days, on sale daily.

Remember the Missouri Pacific Ry. and Iron Mountain Route reaches the principal points in the above named states without change of cars.

For descriptive literature and other information, address Ellis Farnsworth, D. P. A., 186 Clark St., Chicago, Ill.

\$3.50 TO ST. PAUL AND RETURN, FROM DES MOINES.

Via the Minneapolis & St. Louis R. R. Correspondingly low rates from intermediate points. Tickets on sale July 24th, 25th and 26th; return limit July 30th. Limit will be extended to August 15th on payment of fee of fifty cents. For further information please call on or address W. K. Adams, D. P. A., or D. B. Ransburg, C. P. A., 512 Walnut St., Des Moines, Iowa.

ST. PAUL AND RETURN.

On July 24, 25 and 26 the Chicago Great Western Railway will sell round trip tickets to St. Paul and return at rate of one fare plus fifty cents, account of the Biennial Saengerfest of the Saengerbund of the Northwest. Complete information can be obtained from E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

VETERINARY MATTERS

PROFESSIONAL veterinary advice through this
department to regular subscribers only. We do
not answer veterinary inquiries for the benefit of
"neighbors." Parties desiring information will be
required to send their names in full with their ad-
dress. No question will be answered by mail unless
accompanied by a fee of \$1.00. In order that correct
information may be given, the symptoms should be
accurately described, stating of how long standing,
together with color and age of animal, and what
treatment, if any, has been resorted to. All veteri-
nary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT

LEMENESS.

I have a mare that has deep cracks in the
front foot on each side of frog. That makes
her limp when turning short, but does not
interfere when going straight ahead. Veteri-
narian says cracks are the cause of the
lameness.

It is highly improbable that cracks
are causing the lameness. If the trou-
ble is located in the feet, she will thrust
them out in front of her when standing
still. As she flinches when turning we
suspect shoulder lameness, so your veteri-
narian should make another and more
careful examination.

PARALYSIS.

I have forty-nine springs pigs about three
months old, and a few days ago one was
stiff in his legs and could not get along
very fast. The next day there was another,
one the same way, only worse, and I have
noticed that others seem to be affected the
same. I have been feeding them a bucket-
ful of shelled corn (soaked) twice a day and
the same amount of soaked oats, and about
six bucketfuls of slop of skimmed milk,
ground feed, and tankage each day.

See recent answers on this subject.
The trouble is due to overfeeding and
especially to use of corn which is unfit
for young pigs. Use lime water freely
and turn pigs out to grass to get all
the exercise possible. Stop use of soaked
oats. They too, are unsuitable. Continue
slop of milk, middlings and tankage.

PAMPERING.

I have had rather a peculiar experience
with my hogs this year. I fed my sows be-
fore farrowing on cooked feed, composed of
equal parts of corn, wheat, oats and bran,
about 10 per cent oil meal and a small quan-
tity of soluble blood flour, with sweet corn
fodder for roughness. Sows were in very good
flesh at farrowing time. Three of the sows
refused to own their pigs, and one killed
hers by biting them through the back. When
pigs were three or four weeks old the sows
began to get weak in the back and to lose
flesh. The pigs are doing nicely now, but
two of the sows do not improve.

There is nothing "peculiar" about the
experience and all of the trouble is due
to pampering the sows with cooked feed
while allowing too little exercise. Stop
the cooked feed; it never is necessary
and always is unnatural. Leave corn
in any form entirely out of the ration
of pregnant and nursing sows and do
not give it to the young pigs. It is the
cause of the paralysis complained of and
its use will induce same trouble in pigs.
The other foods you mention are suit-
able.

LOSS OF FOAL.

I have a mare five years old that was
due to foal on the 1st of May, but did not
foal until the 10th. About six weeks be-
fore she foaled she commenced to lose her
milk. She did not make any bag like a
mare in good condition ought to have done,
but the milk ran in streams from her. The
colt, when it came, was dead, and nothing
but skin and bones. Do you think the foal
starved on account of the mare losing her
milk? The mare was well fed and did light
work every day. Would it be of any use
to try to raise colts from this mare now?

The foal was ready to come when milk
first was seen to flow from the udder
and had an examination been made at
that time the mouth of womb doubtless
would have been found open and foal
might have been removed at once by
breaking the water bag so that labor
would follow. The foal died about that
time and came away later. The mare
should again be bred on a guaranty that
the foal is to stand and suck and if she
is properly cared for, worked up to time
of foaling and fed to keep bowels regu-
lar but not fatten her unnecessarily she
should have no trouble at next foaling
time.

PARALYSIS.

Please tell me what is the matter with my
pigs. I have a litter of seven farrowed on
the 15th of April. They were fed as soon
as they could eat and drink, milk with oats,
wheat, and corn, equal parts ground togeth-
er, until I turned them out to pasture of
oats which had a fine growth, and then
fed them sparingly ear corn and milk. They
have always been strong and healthy and
look well now, but cannot use their hind
legs to walk. They stand on them some
while eating. They are all affected; are
nine weeks old, and have been lame three
weeks.

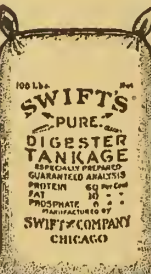

For answer see almost any back num-
ber of the paper so often have we re-
plied to such an inquiry. The trouble
is a form of rickets due to overfeeding
young pigs that have inherited the sus-
ceptibility to such disease from pam-
pered corn-stuffed ancestors. Corn
should not be used as food for young

**Swift's
Digester
Tankage**

—for Newly
Weaned Pigs

The digestive organs of
newly weaned pigs are so
delicate that coarse, bulky,
irritating meals cannot
be fed with safety. Swift's
Digester Tankage, appetiz-
ing, concentrated and
nutritious is indispensable.

It Keeps Them Growing

Tankage-fed pigs keep right on growing. They are
not troubled by Thumps, Ricketts or Rheumatism.
They look well, grow well and PAY well. We give
facts and figures in our booklet, "Protein for Profit."

Swift & Company, U. S. A.

Animal Food Department, Desk 6
Union Stock Yards CHICAGO

pigs or breeding stock and the wheat
was unsuitable. Feed middlings, milk,
dried blood meal or tankage and mix
limewater freely with all food and drink.
Allow free range on green feed. The
idea is to gradually grow a muscular,
strong-boned pig rather than a fat,
pudgy, soft, flabby-muscle weak-boned
pig such as always is taken with this
form of rickets or paralysis.

NAIL PRICK.

I have a black mare five years old that
ran a nail in her foot about the 15th of
April, 1906. The nail was removed as soon
as she showed lameness, but an abscess
formed under the frog, making her very
lame; so lame that she did not use her
foot any for about a month. She has been
using it now for some time, and has shed
part of the frog, but the foot seems to
be pretty tender yet. Have done nothing
but wash it with carbolic acid and water.
Is there anything I can do to hasten a com-
plete recovery?

All loose and under-run horn should
be removed; then swab raw parts with a
saturated solution of corrosive subli-
mate and put on a dressing of one part
iodoform and six parts boracic acid on
cotton batting held in place by means
of bandages. Renew dressing daily un-
til wounds are covered with new horn.
If the horse is then lame clip hair from
hoof-head and blister repeatedly with
cerate of cantharides. As soon as sole
will stand it put on a dressing of oakum
and tar covered with a pad of thick sole
leather and over that a flat shoe.

BRITTLE HOOF.

I have a German Coach mare six years
old that has poor feet. When I bought
her about four months ago I removed her
shoes, as it was muddy, and I thought it
a good idea to take her shoes off for a
time. Later, on using her once on a dry
road, her hoofs broke off above the soles
of her feet. I have not used her on the
road since, but have used her some in the
field and notice that she shows a tender-
ness in the feet when walking over hard
dry places. The hoof, which is very thin,
seems to part from the foot before it gets
below the sole, and on paring the rough
edge of the hoof a streak of dirt is shown
pressed in between the foot and the hoof
a little above the sole, and consequently
it seems impossible to get the hoof to grow
low enough to admit of shoeing. Can you
tell me whether this is a disease or a weak-
ness, and also if there is a remedy?

She may have been foundered, but the
hoofs should grow so they will stand
shoeing if you remove hair from cor-
nets and blister well every three weeks
with cerate of cantharides. Turn her out
on low pasture after washing off blister
at end of two days each time it is used.
She will have to run barefoot the entire
season, but may be used on soft ground
if not lame or too sore.

"The Greatest Annual Live Stock and Industrial Exposition on Earth"

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

OUTLAWED NOTE.

A Subscriber, Pocahontas, Iowa.—B. gave to A. a promissory note dated June 1, 1894, due October 1, 1894. Can A. collect the same by law by beginning suit against B. at once?

Answer.—He cannot if B. defends the suit, and pleads the statute of limitations. The note was barred in ten years after it was due.

PARTITION FENCE—TRESPASS.

A Subscriber, Deerhead, Kan.—A. and B. own adjoining farms. The county line divides them. In A.'s county stock is allowed to run at large, and crops are fenced, while in B.'s county the herd law is in force restraining stock, thus making it unnecessary to fence crops. A. and B. came to an agreement about a partition fence between their pastures, and each one built half of it. Afterwards B. grew a crop on his land, and notified A. to buy his part of the fence or he would remove it. A few days after this notice he did remove the fence and allowed A.'s stock to damage his crop. (1) Can B. recover damages for the injury to his crop? (2) Can A. compel B. to replace the fence? (3) What remedy, if any, has A.?

Answer.—(1) We think not, because his removal of the fence appears to have been made without giving the notice required by law. Section 19 of Chap. 153 General Statutes of Kansas, provides: "When any party shall desire to throw his land open and leave it uninclosed he shall not take away any part of the partition fence belonging to him and adjoining the next inclosure, if the owner or occupant of such inclosure will within two months after the same shall be ascertained, pay therefor such sum as the fence viewers shall in writing under their hands determine to be the value of such partition fence belonging to such party." This must mean that the value of the fence is first to be fixed by the fence viewers; then the other party has two months thereafter to say whether

he will pay or not. (2) We think not. (3) The whole matter ought to be submitted to the fence viewers.

ADVERSE POSSESSION.

A Subscriber, Grand River, Iowa.—A. and B. own adjoining lands. The division fence is a hedge, owned by A. He set it out about thirty years ago. At that time he did not know exactly where the division line was, so he set it in such a way as to be sure that it was on his own land. It has since been ascertained that the hedge is actually over on A.'s ground from ten to twenty-five feet. Can A. recover the strip of ground on B.'s side of the hedge if B. objects to it?

Answer.—If B. has occupied the land on his side up to the hedge fence, claiming to own it for more than ten years, A. cannot recover the strip, because possession of land with a claim of ownership for ten years as against the original owner gives title by what is called adverse possession, under the laws of Iowa.

EXTENDING PUBLIC ROAD.

A Subscriber, Hamilton, Iowa.—A public road runs by the houses of A., B., C. and D. in Monroe county. It runs north to the county line and stops with no outlet. Less than a quarter of a mile north is a public road. How can the Monroe county road be extended through to the one last mentioned and who must pay the expenses of opening it?

Answer.—It can be done only by the regular proceedings to establish a road, namely, petition to board of supervisors of the county where the road is to be opened, filed in auditor's office with a bond for expenses in case petition is not granted. The auditor then appoints a commissioner to examine and report on the expediency of it. If objections are made, or claims for damages, appraisers are appointed to assess damages, and finally the whole matter is determined by the board of supervisors.

EASEMENT BY PRESCRIPTION.

A Subscriber, Fon du Lac county, Wis.—I have a lane along one side of my farm which I and other people have used for the last sixteen years. There is a gate at each end of it. There was never a sign "private road" put on the gates, and I never objected to others using the lane. Can I lawfully shut up the lane and forbid others using it? (2) For the last thirty years I have driven over a neighbor's land without any written contract or lease. He did not object to it, and had no sign up indicating that it was a private road. Have I acquired a right of way over the land, or can the owner now prevent me going over it?

Answer.—(1) You can. Sixteen years' use of a way over a man's land does

not give the users title to it. (2) You have not acquired a right of way on your neighbor's land. You have merely used it by the owner's permission, not as a matter of right. To acquire such a right requires twenty years' use by one claiming it as a right against the owner.

DRAINAGE LAW.

Mr. C. E. Geeseman, Sutherland, Iowa.—I have been informed that if a land owner wants to drain his land by a tile drain, and has no outlet he can force the man below him to put in a tile drain on his land to furnish such outlet. What is the law upon this subject?

Answer.—Your information is not correct. The law of 1904 provides—"Owners of land may drain the same in the general course of natural drainage, by constructing open or covered drains discharging the same into any natural water course, or into any natural depression, whereby the water will be carried into some natural water course, and when such drainage is wholly upon the owner's land, he shall not be liable in damages therefor, to any person or persons, or corporation."

PASTURING STOCK ON HIGHWAY.

An Illinois Subscriber.—(1) What is the law in Illinois in relation to pasturing stock on the public road? (2) Is there a stock law in Illinois?

Answer.—The owner of the land over which a public road is located, may pasture stock on the roadside, provided he keeps the stock under control and does not in any way impede or hinder the public in the use of the road. And so he may on his side of the road, where his boundary line is in the middle of the road, but he must not in either case permit his stock to run at large on the road. No one but the owner of the land on which the road or part of it is located, has any right to pasture stock on it under any conditions. (2) There is a stock law in Illinois. Live stock is prohibited from running at large in the state.

PARTITION FENCE—TIMBER LAND.

Mr. J. P. Williams, Fayette, Iowa.—A. and B. own adjoining tracts of land. A.'s tract is cultivated and improved. B.'s tract is unimproved timber land, and he does not use it otherwise than for the timber thereon. A. wishes to pasture his land for a part of each year. B. refuses to help build the partition fence, and insists that A. shall keep his cattle out of his (B.'s) timber lot. (1) Can A. compel B. to help build the partition fence? (2) Is the exclusion in Sec. 2355

Code of 1897, general, applying to all timber land, or is it to be construed with the preceding clause in such a way as to make the exception apply only to the line between adjoining timber tracts?

Answer.—(1) He cannot so long as B. uses his land only for the timber thereon. (2) The exclusion, or exception, is general; it is not limited to partition lines between lands, both tracts being timber land; but is applicable to a line where one tract is cultivated and improved, and the other is used only for timber.

COMPANY TILE DRAIN.

A Subscriber, Radcliffe, Iowa.—I have an interest in a large tile drain which runs through three farms and empties on the fourth farm. It is a company drain. It is necessary at times to have the drain examined near the outlet. (1) Can the party at the lower end lawfully refuse to allow other interested parties to go upon his premises for the purpose of such examination when necessary? (2) Can one of the parties owning the drain leave a hole in it on his own land, or an opening down to it, without the consent of the other parties?

Answer.—He cannot prevent other parties interested in the drain with him, from going upon his premises to examine it, but if he refuses, it will be necessary to engage a lawyer and have him enter proper proceedings in court to accomplish the purpose. (2) On general principles, no, but much depends upon the kind of contract or agreement entered into between the parties who own the drain.

ANOTHER "HISTORIC EAST" PARTY.

From July 31st to August 31st the F. & L. Excursion Company will conduct another party from Des Moines to Chicago, Detroit, Buffalo, Niagara Falls, Toronto, Lake Ontario, Thousand Islands, St. Lawrence River, Montreal, Quebec, White Mountains, Portland, Boston, Plymouth Rock, Newport, New York, Hudson River, Philadelphia, Washington and Deer Park. Stops at all of above points from few hours to five days. Total expense of trip, including transportation, herths, hotels, meals and side trips, \$155. For full particulars and itinerary, address E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

LOW EXCURSION RATES TO NEW ENGLAND AND CANADIAN POINTS VIA THE C. & N.-W. R.Y.

Tickets on sale daily until June 30th; also on July 4th and 18th, August 8th and 22d and September 5th and 19th at one fare plus \$2 for fifteen-day tickets, or one fare plus \$4 for thirty-day tickets. Stopovers allowed at Detroit, Niagara Falls and other intermediate points. Full information at 401 Walnut St., or C. & N.-W. passenger station.

WITH THE EDITOR.

A SUNSET THOUGHT.

The sun is burning with intensest light
Behind yon grove, and in the golden glow
Of unconsuming fire it doth show,
Like to the bush in which to Moses' sight
The Lord appeared, and O am I not right
In thinking that He reappears 'e'en now
To me in the old glory, and I bow
My head, in wonder hushed, before His
might.

Yea! This whole world so vast to Faith's
clear eye
Is hut that burning bush full of His power,
His light and glory, not consumed thereby,
But made transparent till in each least
flower,
Yea, in each smallest leaf, she can descry
His spirit shining through it visibly.

—Henry Ellison.

Among Ourselves there has been some talk of opening the windows of our home that the breath of God's out-of-doors may be wafted in upon us these summer days. I thoroughly approve of the idea. I mean to do what I can to further such a laudable undertaking. I begin by bringing the above suggestive and beautiful lines inspired by the setting sun, and an extract from "Miss Murdock—Special," by F. Hopkinson Smith, in July "Success." I had planned giving the preface to VanDyke's "Wood Magic," when in an idle hour I read about an old man who seems to me to have eaten the berries of which VanDyke wrote: "If you find them it is your fortune; if you eat them it is your fate."

Old Jonathan lived in a cabin—a slant of logs with a stone chimney. The cabin was in Franconia Notch, in a little hollow under White Face and below Bog Eddy.

"Every morning the smoke would curl straight up from the rude chimney, catch a current of air from the valley, and stretch its blue arms towards the tall hemlocks covering the slope of the mountain. Joe knew these hemlocks—loved them—had hugged them many a time, laying his plump, ruddy cheek against the cool moss velveting their sides. 'Nothin' like trees,' his old father had told him—'real human when ye know 'em.'

"Dogs and trees, my son, will never go back on ye like some folks I've hearn tell of. Allers find 'em the same. See that yaller birch over thar? Well, I've knowed that birch over forty-two year and he ain't altered a mite, 'cept his clothes ain't as decent as they war, and his shoes has give out round the roots. You kin see whar the bark's busted 'long 'round his toes, but his heart's all right and he's alive, and peart, too. You'll find him fust tree out in the spring—sometimes 'fore the sugar sap is done runnin'. Purty soon, if you watch him same's me, ye'll see him begin to shake all over—kind o' shivery with some inside fun; then comes the buds and fust thing ye know, he gives a little see saw or two in the warm air and out busts the leaves, and he a-laughin' fit to kill. Maybe the birds ain't glad, and maybe them squirrels that's been snowed up all winter with their noses out o' that crotch, ain't jes' holdin' their sides, and maybe, too, them little sunbeams don't like to sneak in and go to sleep on the bark all silvery and shinin' like the ribbon on Sis' hat. They're human, them trees is, I tell ye, son, real human!

"And ye want t' treat 'em with some perliteness, too. They're older'n anything 'round here 'cept the rocks, and they've been holding up the dignity of this valley, too—kind o' 'sponsible fer things. That's another thing ye mustn't forget. And see how they treat their brothers that git toppled over and are done fer—by a windlash maybe, or lightnin' or a landslide, or some such cussed thing. Ain't more'n a year or two after they're down 'fore they git 'em kivered all over with leaves, and then they git tergether and hev a quiltin' party, and purty soon they're all over blankets o' green moss, and the others jes' stand 'round solemn and straight like's if they was mountin' guard over their graves.

"It's wicked to kill most anything less ye got some use—and a good one, too—for the meat, but it's a durned sight meaner to cut down a tree that took so long to grow and that's been so decent all its life, less ye can't do without the stuff ye git out of it."

Oh, yes; I certainly think old Jonathan had tasted the berries of "Wood Magic." You'll agree with me when I tell you what VanDyke says of that wonderful forest vine—that will be next week. There is so much going on Among

The Farmer Boy of Today is The Business Man of Tomorrow

It's an undisputed fact that the men at the head of the largest mercantile businesses in the United States are men who were "boys from the farm." The boy on the farm has greater opportunities to become great in the business world than the boy in the large cities, if he will but grasp them. A business college education is the passport to success. If obtained at the proper school it can be easily, quickly, economically acquired. We have graduated thousands from

THE GEM CITY BUSINESS COLLEGE

and they are making both fame and fortune. We give you an actual, practical business education that fits you to step right into the business world and go right ahead. Our college is a typical big mercantile house. You learn to transact business just as it is actually transacted. It is not a mere book knowledge we teach. Our students come in actual contact with actual business conditions and methods so that when they have qualified for a position they step out of our business house (college) into the real business office, ready and capable for the work they have chosen. Our course comprises Bookkeeping, Banking, Shorthand, Rapid Calculation, Penmanship, Business Management, Accounting, in fact every phase of business work. Personal instruction. A \$100,000 College Building. Twenty expert business teachers. Good home boarding places at reasonable rates. Just write for 64-page illustrated free catalogue; mention the line you wish to study and let us convince you that we offer the most practical business education at modern cost obtainable. The Gem City Business College, 205 Musselman Bldg., Quincy, Ill.

HOME AND HOME MAKING.

LITTLE HELPS BY THE WAY. CHARACTER BUILDING.

We are building every day
In a good or evil way,
And the structure as it grows
Will our inmost soul disclose.

Till in every arch and line
All our faults and failings shine.
It may grow a castle grand
Or a wreck upon the sand.

Do you ask what building this
That can show both pain and bliss,
That can be both dark and fair?
Lo, it's name is character.

Build it well what e'er you do;
Build it straight and strong and true;
Build it clean and high and broad;
Build it for the eye of God.

"As a graceful mosaic is made by the tasteful inlaying and cementing together of an almost infinite number of little stones, so is a saintly life made up of an unbroken chain of small acts of virtue."

WIVES AND HOUSEWIVES.

A writer in The Gentlewoman has the following to say on the subject: A good wife should be a good housewife, out a good housewife is not necessarily a good wife. We know, according to the cynics at least, that the best way to a man's love is through his digestive organs. Be this true or not, it must be confessed that a bad dinner is a trial to a man's affection, especially if often repeated. But no one with any idea about his own comfort likes the wife to be entirely merged in the housewife—the woman he has chosen as a companion and friend to be wholly given over to the work of the house without any time or thought for anything else.

The happy medium is what is wanted. The wife that is a sufficiently good housewife to make the daily wheels run well and smoothly, and yet one who has time to spare, at least for her husband, from her housekeeping affairs. No man likes to be set aside for the things which make for his own comfort, and the woman who is always busy when her husband wants her, who is always occupied and must not be disturbed when he would take her for a walk, is running a great risk of alienating his affections, and of sending him to seek his pleasure elsewhere. Just give a little heed to the matter I hint at here, and it may be for the good of many estimable women who are not quite living the best life possible for them because they are wrapped up in "the trivial round, the common task."

FRUIT PRESERVING.

The first step in the process of preserving is to secure fruit of uniform ripeness and at the height of its flavor, and cleanliness must be as much a part of the regular routine as the selection of the best materials.

By a very simple contrivance an ordinary wash boiler may be converted into an excellent fruit steamer, one that will do the work as well as an expensive sterilizer. Take a piece of board about one-half inch thick and of a size to fit loosely into the bottom of the boiler. Have the board perforated with holes an inch in diameter and with a space of two inches between each. On the underside of the board nail cleats six inches high, one in the center and one near each

An All-the-Year-Round Country.

IF you wish a profitable location in a climate pleasant the year through, where you can make every day count on the farm, where you can find the best farm bargains, where crops yield abundantly, markets are good and all conditions combine to give greater profits per acre than in any other section of country and absolutely the best returns for money and labor, select a new home district in the South, in the territory of the Southern Railway and Mobile & Ohio Railroad. SPECIAL ANNUAL

Atlantic City, N. J., and many
other seashore resorts
EXCURSION,
THURSDAY, AUGUST 2, 1906,
VIA
BIG FOUR ROUTE
New York Central Lines.

RATE \$19.50 for the round trip from Peoria. Return limit fifteen days including date of sale. Stop-overs will be allowed on the return trip at Philadelphia, Baltimore and Washington within limit of ticket. Special fast train of standard sleepers and coaches will leave 12:00 noon running through without change. For further particulars call on nearest Big Four agent or address

H. R. Daly, T. P. A., 325 Main St., Peoria, Ill.

end. These serve a double purpose, primarily to keep the board above water, also to prevent it from warping. Put water to the depth of four inches into the boiler, put in the board and the steamer is ready. On the board the jars are placed, filled with raw fruit, covered with a rich sirup. Have rubbers adjusted and lids screwed on loosely. Cover the boiler closely. If the lid does not fit, lay under it a thick cloth, so as to prevent steam from escaping.

Bring the water to the boiling point, and boil from ten to twenty minutes, according to the nature of the fruit. Berries require steaming ten minutes, peaches and apricots fifteen minutes, while pears and such fruit must be steamed longer. When done, screw the lids tightly on the jars and set on table to cool. By this method not only is the flavor of the fruit retained, but the shape is preserved, and the ease with which the work may be done is also worthy of attention.

RASPBERRIES AND CURRANTS.

Jam.—Allow equal weights of sugar and raspberries, and cook them together, stirring frequently, for one hour. It should not be boiled rapidly, but allowed to simmer very slowly on the back of the range. Seal while hot in glass fruit jars, screwing the covers on tightly at once, and again when cold.

Currant and Raisin Conserve.—Cut in halves and seed two pounds of large raisins, put them in a quart of water and simmer slowly for an hour. At the same time stem and wash seven pounds of currants and cook in a jar set in a pan of hot water until they are soft. Now add the pulp, peel and juice of two oranges and half a lemon (the peel and pulp minced fine) to

the currants and raisins, together with six pounds of sugar. Boil gently to a jam, and put up in small glassos, covered with paraffin. This is an excellent relish to serve with cold meats.

Equal quantities of raspberries and currants make excellent jam. Pound for pound of sugar and fruit. Less sugar will do.

JUNKET JOLLYS AND JUMBLES

Are a summer dessert ideal, fun to make and more fun to eat.

Allow a quart of new milk, warmly fresh if you can get it, to become lukewarm, pour it into a glass dish, sweeten to taste, flavor with lemon, pineapple, strawberry, vanilla or almond. Add, stirring slightly, one rennet tablet, which you can get at a drug-gist's, or three-quarters of a tablespoonful of liquid rennet. Set it away to cool and do not jar it. If stirred or jarred while cooling it will get tough with whey or with curds and whey, instead of its natural velvety delicacy.

For a fancy jolly or jolly fancy, mix to a smooth paste one tablespoonful each of grated chocolate and granulated sugar with a nip of salt and two tablespoonfuls of milk. Cook these over the top of a tea-kettle filled with boiling water until thick and glossy, then add a pint of lukewarm milk, stir until smooth and turn into a glass dish; add the rennet tablet, stir until dissolved, and set away without disturbing. Serve with thick, rich, sweetened cream and jumbles, and your summer soul will be sweetly refreshed.

AMONG OURSELVES.

Before introducing new topics for discussion let us have a word on two which have been under consideration latterly. Mrs. J. F. S. rises to reply to Mrs. McKerie, and Mrs. Polly to relieve her mind on the subject of borrowing:

My attention has been called to the article by Mrs. McKerie. It is rather difficult to compare men and women. Men know right from wrong as well as women do, and as for going to heaven on the merits of mother or wife, well, that is only a joke. Tasting of forbidden fruit and casting the blame on others has its root in human weakness and is as common to women as to men. 'Tis only too true that some men go where they ought not and sell their birthright for a mess of sin, but, alas, have not some women done the same? And I wonder if there is not some truth in that "she had better stay at home." Not that she should always literally stay within the four walls, but home is the safest and best place after all; at least a good home is that. In the struggle and scramble for a job or for a footing in the business world men are by necessity called away from home more than women, and their hours are sometimes irregular, but not so from choice. Some women wonder why their husbands do not tell them everything. Be worthy of being trusted and you will be told all that is worth knowing. It is not always that he is ashamed of telling that is the cause of his silence. Yes, some men are very agreeable when away from home, but I regret to have to say that some women are not quite as nice or agreeable when away from home, nor at home, as they might be, but it is generally laid at the door of nerves. Now, please do not misinterpret me. I simply mean all men are not bad nor all women good. If men expect us to be all that we ought to be and all that we might be perhaps it is because they feel we are the magnet that has the power to hold them to higher ideals and to all that is best in them.

I have been annoyed so many times by the chronic borrower that I am prompted to speak. Now, don't think I have very disagreeable neighbors, for I have some of the best and pleasantest ones I ever knew, but I have lived next to the chronic borrower often enough. Now, I am just as free-hearted as can be and always cheerfully and willingly loan, but I have been imposed upon so many times by very well-meaning people that I have become hard-hearted and often refuse when I could just as well as not. Mrs. B. sends her little boy over to borrow a bar of soap. You only have two and have a big washing Monday, and live four miles from town. You cheerfully loan her the soap. Mrs. B.'s husband goes to town two or three times a week, and perhaps it is two or three weeks before that soap comes back. Next it is sugar, lard or butter, and maybe you can't spare either very well, but you do it, and when it comes back perhaps it is only half quantity or poor, or, alas, maybe it just slips their mind and never comes back. I have loaned many things I could ill afford to lend which were never returned, and the borrowers were called honest people, too. I once loaned a white fascinator to a girl, who wore it until it was nothing but rags, and then coolly returned it. I was so angry I rolled it up in a ball and tossed it back to her, telling her it did not belong to me any more. It was a keepsake, too, as it had been given to me by a very dear friend, and I was going to keep it always to remember the donor by.

I thoroughly agree with all Mrs. Polly has said, but I confess to a desire to cross swords with Mrs. J. S. F. I would yield to the temptation perhaps if there were not several even now on their feet waiting to catch the eye of the president. Probably some others feel as I and we shall hear more on the subject. Meantime Mrs. H. E. F. comes with an interesting set of questions:

I am an interested reader of the Home Department. I would like to tell of a little incident that came to my notice a short time ago, and also would like to hear some of the opinions of the Home Department readers. A young married couple, living on a farm near by, have one child, a boy, a little over three. He is quite a well-behaved little fellow, but, of course, has his naughty times the same as any child. One day they entertained at dinner the grand-

parents on the paternal side of the house. As they seated themselves at the table the boy, whom we will call Harold, was guilty of some action which his mother thought should not be allowed to pass unpunished. She took him from the table and placed him in a small room, told him, when he could be a good boy he might come to the table. She then closed the door and left him. When she returned to the table she was greeted with several remarks from the grandmother, which showed that she was in sympathy with the child. To these the mother paid no attention further than to remark that she wanted to teach Harold to be a good boy. At the end of about ten minutes the grandmother got up from the table, went to the sewing room where the boy was confined, brought him to the table, held him on her lap and petted and loved him up in great style. This being most too much for the mother's patience she made the remark that "she did not think it right for her to do that way." At these words the grandmother showed signs of injured feelings, pouted all afternoon and as far as I know has not yet recovered. I would like to know what others think was the best thing to do. Did the grandmother do right to interfere? Did the mother do wrong in resenting the interference?

Apropos of these questions, here is a clipping from a daily paper of recent date: "A story which is going around tells of a reporter who interviewed thirty prosperous business men concerning their boyhood and found that every one of them had been thrashed frequently and hard. He then investigated concerning thirty loafers and found that twenty-seven of them had been mammas' darlings and the other three had been raised by grandmothers."

With some diffidence I permit what is practically an arraignment of old people, of some old people that is, and yet E. E. H. is perfectly justified:

I am a newcomer, knocking for admittance, with a subject that has given me food for thought for a number of years. We see year after year old people who have become unable to care for themselves any longer, who for lack of maintenance, sometimes from choice, go to live with their children or some other kind relative and soon they seem to be unwelcome. You say it ought not to be so, and it is true, but the question in my mind is, whether or not these old people are not many times most to blame. A family of younger persons, born from twenty to fifty years after the old people above referred to, ought not to be expected to live and have the same as the grandparents did at their age and time, nor should they be continually reminded of how "we did when we were young," with the implied impression that as they did is the only right way. Grandparents have learned by experience, it is true, and the young can do the same. It is irritating to be dictated to too much. With great respect for the aged I mention personal cleanliness. Hawking and spitting is very disgusting, even sickening to some persons and there are ways of getting along with such things that seem to come to nearly all persons with age if not in early life in a neat and less disgusting manner than is sometimes the case. In fact, grandparents are never too old to exercise self-respect by respecting those with whom they are surrounded and one of the best methods of doing so is to willingly allow the young to perform the labor and bear all responsibilities, think the old memories and not put them into words, never let go of the lever of the drive wheel and contemplation of the release just beyond. Inquisitiveness is not an essential virtue in old age, but courtesy is. It may be that if the old people could conform more to others who live in other homes than their own they would be more welcome than they many times are.

Old age should command respect, admiration, love; but when it does not what then? Should the younger generation stifle its ambitions, suppress its likes and dislikes? In a word should it make itself subservient to a generation which has had its day? Answer, please, you who approach the end of the journey, and you, too, who having ascended the hill of life have begun the gentle descent toward the valley of old age.

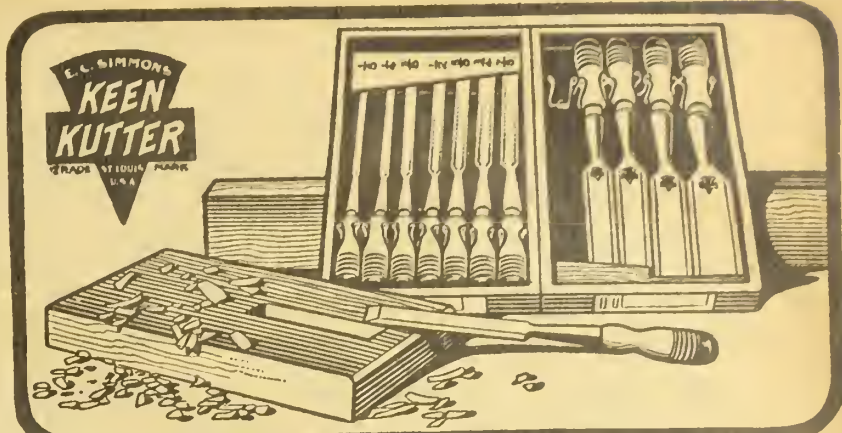

Dressmaking and Millinery—No. 525.

Sylvia Silverthorne, Muscatine, Iowa.

[All inquiries and remittances for patterns described in these articles should be addressed to Sylvia Silverthorne, Muscatine, Iowa, and not to the office of this paper nor to the editor of 'the Home Department.]

Among the many devices that are an aid in the adjustment of the small belongings of dress I have noted nothing that is a greater boon than the simple little collar supporters, intended to keep lace and other band collars from being crushed into a "string" when the wearer drops her head forward. Few of us but bemoan such fate for our collars of this class, and various forms have been tried as a remedy, but these seem to answer the purpose without being in the least conspicuous. They consist of a metal bar, on the two ends of which are short pins that are pushed through the openings in the lace work or embroidery of the collar, then jeweled screw tops are adjusted. One may purchase these at almost any price, making her selection as she would her set of shirt waist pins, paying much or little for them as she feels able, for like the pins they may be had in the "real" or the "imitation." They come in pairs on a card, with illustration showing how to adjust them, and may be found at the novelty stores or counters, or for a finer quality look at the jewelers.

In our changeable climate we do not find

SUCCESSFUL TOOLS

These Chisels have carved their way to fame. To-day, those who know tools pronounce the Keen Kutter the perfect Chisel Success. Tempered nearly to the handle; hand whetted; sharp and ready for use; handles of selected white hickory with leather heads.

KEEN KUTTER

QUALITY TOOLS

are all successful tools—tools that have won their way by hard, honest, true work. Every step in their success has been reached by sheer force of merit and quality. Keen Kutter Tools include—Saws, Chisels, Bits, Gimlets, Awls, Planes, Hammers, Hatchets, Axes, Drawing-knives, Pocket-knives, Screw-drivers, Pliers, Glass-cutters, Ice-picks, and a full line of Farm and Garden Tools. For 37 years Keen Kutter Tools have been sold under this mark and motto:

"The Recollection of Quality Remains Long After the Price is Forgotten."

SIMMONS HARDWARE COMPANY, St. Louis and New York, U. S. A.

SOUTHWEST

The Land of BIG CROPS and PROSPERITY

Are you making as much off your farm as you ought? No doubt you are making all you can. The trouble is the land costs too much. It takes too much money to buy a big farm, and so you are trying to make a living on a small farm, or perhaps you are renting one and paying a good share of what you raise, in rent. Wouldn't it be better to go where the price of good land is so little that you can own a big farm—where every acre of ground is working for you and all you raise is paying you good profits?

There are thousands of acres of fertile land in the Southwest along the line of the Cotton Belt Route that can be bought for from \$3 to \$10 an acre. This land is increasing in value each year.

See the Southwest at Small Cost

A trip to the Southwest would convince you that your best interests lay in settling there. The trip can be made at very little expense. On the first and third Tuesdays of each month you can purchase a round trip ticket to any point in the Southwest on or via the Cotton Belt Route at very low rates. Stop-overs will be allowed for you to examine any locality you are interested in.

Write at once for free copies of books describing this wonderful country and for full information about cost of tickets, etc.

L. E. SAUPE, T. P. A., Cotton Belt Route, St. Louis, Mo.

the time that some sort of wrap is not needed, whether for children or the older ones, and at this season some new designs

in No. 5397. The fronts and back of the coat are tucked lengthwise, the tucks at the front being strapped back in effect at

[5397—Girl's Tucked Coat, 6 to 12 years.]

[5391—Girl's Dress, 6 to 12 years.]

are being given out from time to time, these being especially adapted to the light weight materials, in color or in white, and one of the prettiest seen recently is that shown

least by means of fancy tabs. These may be used or omitted and any mode of decoration used that is liked. The collar is scalloped and its edge is trimmed with a

frill of narrow ribbon, but this last touch would be omitted if the coat is of material that is to be laundered. Or if liked, a frill of lace may be used and so joined that it may be removed for laundering. The sleeves are full and have turn-back cuffs. The coat is in three quarter length, but one may easily add to the length if a long coat is desired. Pattern No. 5397 is cut in sizes for girls of 6, 8, 10 and 12 years.

One of the very cutest designs for a child's dress seen in a long time is that pictured in No. 5391, and although the garment seems to be in one piece as to length it is in fact a skirt and waist joined at the belt. The bertha and plastron are cut in one and are so adjusted that they seem to form a broad panel with the front pleat of the skirt. This is the novel and at-

tractive feature, and yet so simple that it does not call for much extra work in the making, nor is it at all difficult to launder when necessary. The design is suitable for general wear and is also quite charming enough for the very best dresses. There may be short or long sleeves, high or low neck, and the waist may be laced or not as liked. The seam joining the waist and skirt is concealed by the belt that may be of any kind liked for the purpose. In the illustration it is pictured made of the embroidered banding used to trim the bertha. The pattern No. 5391 is cut in sizes for girls of 6, 8, 10 and 12 years of age.

Send eleven cents in money (not stamps) for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

Pleasant Fields of Holy Writ

SAVE for my daily range
Among the pleasant fields of Holy Writ
I might despair.

THE INTERNATIONAL SUNDAY-SCHOOL LESSON

Third Quarter. Lesson IV. Luke XI, 1-13. July 22, 1906.

Jesus Teaching How to Pray.

"Lord, what a change within us one short hour spent in Thy presence will prevail to make!" —Trench.

The apostles observed Jesus in the act and attitude of prayer. In some oratory of nature, perhaps, they saw Him kneeling with upturned face. His glowing lineaments showed the bliss of communion with God, or repose after wrestling, and the conscious obtaining of the thing desired. A goodly sight! No wonder it provoked the question how they could learn to pray after such a fashion.

The universal Teacher taught through these supplicants all who would afterward learn of Him concerning this supreme act of the soul. He first gave the model of prayer—the ideas, the words. The Paternoster is an epitome. Here are the needs alike of the race and the individual in miniature. It is the alphabet, the numeral system out of which prayer of every description can be spelled and figured. Analytically, in its separate parts, it illustrates the components of a true, rounded, acceptable prayer. Synthetically, there is in it a tenor, a spirit—a cumulative power unmatched in written language. It is the chief ornament of every ritual. Its perpetual repetition worries no one. It is suited alike to child and adult.

The Lord's Prayer is a fine example of the avoidance of many words which Jesus on another occasion insisted upon. The equilibrium between comprehensiveness and condensation is maintained. The exordium is a reverential address to the Deity, in which His existence, unity, and paternal character are adoringly recognized. The "kingdom of heaven" will be found to be the solvent of the prayer. The coming of the kingdom will insure the hallowing of the Divine name, and the doing of the Divine will, as in heaven, so on earth. The coming of the kingdom insures absolution, reduces temptations, and consequently delivers from evil. Criticism has fairly established that the ascriptions of kingdom, power and glory was not a part of the prayer as originally given. But the lofty doxology echords so perfectly that it will probably continue in use forever. The prayer can be divided into two parts: The first relates to the Father, and contains three petitions; i. e., concerning His name, His kingdom, and His will. The second concerns ourselves, and is

comprehended in the words bread, forgiveness, and deliverance. Rudolph Stier says in his "Words of Jesus," "All the tones of the human breast which go from earth to heaven sound here in their keynotes."

From this matchless formulary Jesus passes to the spirit which should characterize the suppliant. To set this forth, He uses a homely domestic incident. We must transfer ourselves to the Orient to appreciate it. There was no mail or time table to apprise the host of the hour of the guest's arrival. It would like as not be late at night, as travel was ordinarily continued then, to escape the heat of the day. The guest would be downright hungry, as there were no facilities of the modern restaurateur. The host's larder would like as not be empty, the climate making the preservation of edibles difficult, and leading them to live from hand to mouth. Borrowing would be the next thing in order. What a touch of nature in the ehurlishness of the half-awakened neighbor! To him the getting up from his warm bed, and the stumbling over his children as they lie hit and miss upon their tiny mats about the floor; the taking down of the heavy bar across the door; all seem to his drowsy powers a superhuman exertion. Yet there comes at length a point where it is easier far for the sleepy niggard to get up and have done with the matter, than to be periodically roused by the persistent knocking and calling.

The force of the parable is in its contrasts. God's eye is never closed in slumber. God's self is love. His treasures are inexhaustible. He delights to give. There is no indifference or disinclination on the part of God which must be first overcome by man's importunity. The delay in answer, if there is any, is for the recipient's own highest advantage; that he may study anew his supposed needs, may analyze his motives, may review the promises, so that when at length the answer comes, he may be in a state of mind and heart to avail himself of the blessing to the uttermost. Postponement is for the advantage of the receiver, not the Giver.

The Paternoster is still in Jesus' mind. Earthly fathers have judgment to discriminate between good and evil gifts for their children. They have natural affection enough to incline them to bestow only the good. If that be so—and who denies it?—how will not the Heavenly Father, infinite in wisdom, power and love, bestow that all-inclusive gift, the life and light of the soul, the Holy Spirit, to those who, out of the vocabulary of the Paternoster, and in the spirit of the parable, ask Him?

Weatherproof CONGO ROOFING

Congo is a ready roofing that outwears any other. When once on, it is there to stay and requires no repairs, no paint or any other attention for years. Any one can lay it by simply following instructions.

Analysis and Key.

1. Request for form of prayer natural. John Baptist's precedent. Jesus Himself observed in prayer.
2. Jesus' divine answer. Universal teacher gives universal form.
3. Analysis—First part relates to the Father—His name, kingdom, will. Second part relates to man—bread, forgiveness, deliverance.
4. From form to spirit of prayer. Illustrated by parable. Its contrasts, the force of it.

The Teacher's Lantern.

"Our Father in heaven, we hallow Thy name; May Thy kingdom holy on earth be the same;
O give to us daily our portion of bread, It is from Thy bounty that all must be fed;
Forgive our transgressions, and teach us to know

YOU CAN RESTORE YOUR HEARING AND EYE SIGHT AT HOME IN FIVE HOURS.

THESE BOOKS ARE FREE!

WRITE today and read of the remarkable cures being made by this new system. 100,000 patients have used it.

I WANT every person afflicted with Cross Eyes, Cataracts, Granulated Lids, Wild Hairs, Glaucoma, Ulcers, Inflamed or Sore Eyes, Scum, Films, Weak Eyes, Falling Eyesight or Blindness from any cause, to write me for my big free 80-page book on Eye Diseases.

And those afflicted with Deafness or Falling Hearing, Head Noises, Ulcerated or Throat Disease, to write for my free 64-page book on Deafness and Ear Diseases.

These books explain how people afflicted with the above named diseases may cure themselves in five hours by following my advice.

Are You Coming to the State Fair in DES MOINES, AUGUST 24TH TO 31ST? If You Are, Write for One of My Books.

I will send you a consultation card which will entitle you to free examination at my office during State Fair week. I usually charge \$5 for examination at office but that week it will be free.

I make no charge for consultation by mail.

Write me for either book you wish and specify which book you want. Also write me a description of your case. I will send my opinion and book absolutely free.

CROSS EYES Straightened Quick. I will straighten any case of Cross Eyes during State Fair week for \$25. No matter how badly Crossed or how long they have been. I do it in five minutes without pain or chloroform. Write me. Address,

DR. W. O. COFFEE,

Peoria Tent and Awning Co., 117 Main Street, Peoria, Illinois.

The humble compassion that pardons each foe;
Keep us from temptation, from weakness, and sin;
And Thine be the glory, forever. Amen.

Form and fervency! Their juxtaposition here is no accident. It is designed to teach us that they are not inimical; that the importunate soul can express itself in the phrase of the Paternoster. Phillips Brooks poured out his great heart in the prayer of St. Chrysostom, and other "forms" of the prayer book. Moved himself, he moved all who heard him.

The golden mean is to be maintained, however, between a too rigid adherence to form and a persistence in extemporaneous prayer.

John Baptist would likely give his disciples a form of prayer. He gave minute and practical directions to each class of his converts, the people, the publicans, the soldiers. He would hardly omit teaching them how to pray.

Jesus is our standing pattern in prayer. He enforced His precept with His example. Twenty-one instances of His praying are noted in the Gospels—secret, public, at meals, long prayers, ejaculatory, intercessory for friends and enemies; all are recorded. The fervency of His prayer is described in the Epistle to the Hebrews. His supplications were offered with "strong cryings and tears."

We are to pray without ceasing. The bird is not always literally flying, but it is ready to fly on an instant. So our souls should be ready to spread their pinions, and mount to the mercy-seat on short notice.

You can no more find a Christian without prayer than you can find a living man without a pulse. Prayer is a state rather than a specific act. Benefit depends upon continuity. One must have the aptitude.

Prayer-wheels turned by water power are numerous in India. The prayer pasted on the wheel is thought to be said with every revolution. Those who laugh at the crudity of the device ought to ask whether in the average Christian prayer there is not some meaningless iteration. God does not need to be instructed or aroused.

Luther is said to have exclaimed, "I have so much to do I cannot get along well without three hours a day praying." Daniel was a busy statesman, but amid the cares of office he found time to pray three times a day.

When the whole number of the sons of God shall have reached this goal, a pure doxology will arise in heaven: Hallowed be the name of our God! His kingdom is come. His will is done. He

has forgiven us our sins. He has brought temptations to an end. He has delivered us from the evil one. He is the kingdom and the power and the glory forever. Amen! (Bengel.)

Our Father, God, who art in heaven,
All hallowed be Thy name;
Thy kingdom come, Thy will be done
In heaven and earth the same.
Give us this day our daily bread;
And as we those forgive
Who sin against us, so may we
Forgiving grace receive.
Into temptation lead us not:
From evil set us free.
And Thine the kingdom, Thine the power,
And glory ever be. —Judson.

CHILD'S AWFUL SKIN HUMOR.

Screamed with Pain—Suffering Nearly Broke Parent's Heart—Speedily Cured by Cuticura.

"I wish to inform you that Cuticura Remedies have put a stop to twelve years of misery I passed with my son. As an infant I noticed on his body a red spot, and treated same with different remedies for about five years, but when the spot began to get larger I put him under the care of doctors. Under their treatment the disease spread to four different parts of his body. The longer the doctors treated him the worse it grew. During the day it would get rough and form like scales. At night it would be cracked, inflamed, and badly swollen, with terrible burning and itching. When I think of his suffering, it nearly breaks my heart. His screams could be heard down stairs. The suffering of my son made me full of misery. I had no ambition to work, to eat, nor could I sleep. One doctor told me that my son's eczema was incurable, and gave it up for a bad job. One evening I saw an article in the paper about the wonderful Cuticura and decided to give it a trial. I tell you that Cuticura ointment is worth its weight in gold; and when I had used the first box of Ointment there was a great improvement, and by the time I had used the second set of Cuticura Soap, Ointment, and Resolvent, my child was cured. He is now twelve years old, and his skin is as fine and smooth as silk. Michael Steinman, 7 Sumner Avenue, Brooklyn, N. Y., April 16, 1905."

ROUND TRIP SUMMER RATES VIA RAIL AND BOAT LINES.

The Minneapolis & St. Louis Railroad will sell excursion tickets via rail lines to points in Minnesota, North Dakota, Manitoba, Montana, Oregon, Washington and California. Also, via Great Lakes route to eastern points. On sale daily with return limit October 31st, or until navigation closes. For further information call on or address W. K. Adams, D. P. A., or D. B. Ransburg, C. P. A., 512 Walnut St., Des Moines, Iowa.

SCOTCH Collies. Beautiful pups ready for shipment. Also very fine Blood Bitches for sale. Pedigree with each sale. S. W. Harr, Riverside, Ia.

When writing to advertisers please mention this paper.

POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

STATE INSTRUCTION ON POULTRY RAISING.

The board of trustees of the Iowa Agricultural College has recently made an addition to the animal husbandry department of that institution by appointing Mr. Howard Pierce, a graduate of Cornell University, to take charge of poultry work. Plans are now being prepared for the erection of a modern and complete poultry plant, and in the near future the work of instruction and investigation along this important line will be under way. The intention is to devote considerable time during the next few years to the study of economical feeding for egg production and of fattening chickens for market.

We believe that this new department will be of immense service to the people of the state. Poultry, as a rule, is handled in a sort of haphazard manner, though in spite of this handicap the industry is a profitable one. The new work at the station through the medium of farmers' institutes and bulletins will, no doubt, contribute much in the future toward making the industry more profitable in the future than it has been in the past.

FEATHER EATING.

"What is the cause of and cure for feather eating, a habit my chickens have fallen into? What is the cure for cholera?" P. A. N.

Honey Creek, Pa.

This is more of a habit than a disease and it is well to kill all birds that have formed the habit. It is due largely to idleness and a lack of animal matter in the ration. Feeding meat scraps will sometimes cure the habit.

Feather Picking

Feather picking is more prevalent among birds that are closely confined; those having their liberty, with freedom to wander at will over arable land and pasture rarely contracting this complaint. Considerable difficulty is often experienced in determining the cause of this ailment, because birds of varying ages, kept under totally different conditions, and in locations quite dissimilar, are equally liable. As a rule, it mostly affects adults, and generally commences during the molting period, when every temptation is put in the bird's way. Chickens seldom acquire the habit, but once they do so greater difficulty is experienced in effecting a speedy and permanent cure. If a bird can be detected in the act, and it is merely a common one, kept solely for egg production, it is better to immediately kill it, because the habit is one that is easily and quickly acquired by the other fowls. If, on the other hand, the bird is of value, it is worth while taking time to cure it, but a good deal of patience and trouble may be required in so doing.

Idleness is one of the predominating causes of feather picking, and this explains why it is more prevalent among birds kept in confinement. Those at liberty are kept busily employed scratching about for worms, grubs, insects, etc., but those in runs have no such occupation, and thus frequently get into mischief. There are several methods of overcoming this idleness, and so removing the exciting cause. If there is a scratching shed available for the birds, the floor should be littered with straw or chaff, and the grain scattered thereamong. A good plan is to only feed half rations of soft food first thing in the morning, following this about 8.30 with some grain, which will keep the birds busily occupied until 10.30 or 11 o'clock. About midday green food should be supplied, and rather than throw it on the ground, as is usually done, it is a good plan to suspend it from the roof, just out of reach of the birds, so that each time they want any they have to jump up for it. If green food is scarce, a mangel, swede, or turnip hung up in a similar manner answers well.

The remedies for feather picking have been suggested in stating the causes; firstly, by giving the birds more occu-

pation; secondly, by exercising the utmost cleanliness; and thirdly, by generously supplying the birds with animal food. There are, however, one or two so-called cures which have from time to time been advocated, but in these I have little faith, the better plan being to remove the cause, thereby effectually overcoming the complaint.—Farm Poultry.

Iowa Climate and Crop Bulletin.

The following climate and crop bulletin is issued by the United States Department of Agriculture, Iowa Section, from the central station at Des Moines, Iowa, for the week ending July 16, 1906:

From Monday to Saturday the average temperature was about the normal for the mid-summer period. The cool wave Saturday night and Sunday afforded agreeable relief from oppressive warmth and humidity. The rainfall was variable, ranging down from a trace at many stations to copious showers in widely scattered localities. Generally the rainfall has been deficient for the first half of July, but the supply of moisture in the soil is ample as yet for corn and small grain crops. The corn crop has made rapid growth in all districts. The more advanced fields are showing tassels at the normal height, and even the late plantings give promise of a good crop.

The hay harvest is well advanced, and conditions have been generally favorable for securing an extra quality of forage. In the southern part of the state the harvest of oats, rye, and winter wheat is nearly completed, and in the northern half early oats and barley are ready for the reapers. Spring wheat is ripening, with variable condition as to stand and damage by rust. Potatoes, vegetables and the late berry crops are doing fairly well. The apple crop is about as previously reported.

"How Will You Trade?" is the subject of The Litchfield continued story this week on page 5. They offer to trade a set of beautiful Indian subject pictures in exchange for a little information which will be very easy for most of our readers. We suggest that this liberal offer, which probably will not appear again, be taken advantage of.

EXCEPTIONALLY LOW RATES TO BRIGHTER POSSIBILITIES

The Southwest is the land of possibilities. The opportunities of men of average means are brighter here than elsewhere—you can get more for your labor or your investment. The opportune time is now while the land is cheap. The country is settling up. If you purchase land now you will soon see grow up around you a community of prosperous energetic men who like yourself have seen the brighter possibilities of the Southwest, and have taken advantage of them.

Along the line of the Missouri, Kansas & Texas R'y in Indian Territory, Oklahoma and Texas are vast areas of unimproved land—land not now yielding the crops of which it is capable. The same thing, in a different way, is true of the towns. Few lines of business are adequately represented. There are openings of all sorts for you. If you're in any way interested in the Southwest, I'd like to send you a copy of my free paper, "The Coming Country."

August 7th and 21st

you can make a trip Southwest exceptionally cheap. Round trip tickets, good thirty—30—days, will be sold by all lines in connection with the M. K. & T. R'y at not more than one fare plus \$2.00; in many cases— from Chicago to San Antonio, e. g., the rate is \$25.00, from St. Paul, \$27.50, from St. Louis and Kansas City, \$20.00—the rates are considerably lower. The tickets permit of stop-overs in both directions, via M. K. & T. R'y.

If your nearest railroad agent cannot give you the rates, write me for particulars.

W. S. ST. GEORGE

General Passenger Agt., M. K. & T. R'y.

State Map 125.

MINNESOTA ACRE BONDS

The Opportunities Offered by Cass County Minnesota Farm Lands Are Drawing Thousands of Families to That Section. The Lands Are Being Rapidly Taken Up And It Will Be the Same Here As It Was In Iowa, Nebraska, Kansas And Other States, Values Are Going UP/UP/UP. Lands Can Be Bought Today by the ACRE BOND PLAN for \$10 Per Acre, But They Will Not Remain Long at that Price.

THE ACRE BOND PLAN

is beyond any doubt the Easiest, Safest, Most Desirable, Most Honest and Straightforward ever invented. It enables you to buy a farm just as you can afford to buy. You can pay for your land one acre at a time if you wish. And you are not obliged to pay at any set times or in any set amounts. *No forfeits. No chance under any circumstances to lose even one single payment.*

How This Plan Differs From Buying Land On Installment Payment Plans—and Why It Is Better.

Suppose you want to buy a farm of forty acres, and you want to pay for it at the rate of \$10 per month. Under the old installment plan you would enter into a contract to buy the forty acres. You would begin making payments—but you would **NOT OWN ANY LAND** until you had paid for the entire 40 acres. If, for any reason you could not keep up your payments you would lose whatever you had paid in. Now, under our plan—the **ACRE BOND PLAN**—you would **not** enter into a contract. You would begin paying \$10 monthly or any other way. And every time you paid \$10 you would receive **A BOND ON ONE ACRE OF LAND**—and that bond would at once begin earning you 5 per cent interest. When you had made 10 payments you could [if you wish] exchange them for a **WARRANTY DEED** to 10 acres of land. That land would **BELONG TO YOU**. Then you would accumulate 10 acres more in the same way—and so on until you had your 40. While you are buying it you are running no risk of losing a dollar. You can stop payments any minute. You still have your bonds or your land. **There are no forfeits of payments already made.** In other words you **GET YOUR MONEY'S WORTH FOR EVERY PAYMENT.**

On the Acre Bond Plan YOU CANNOT LOSE.

On the Installment Payment Plan You Lose All You Pay In Unless You Are Able to Continue Paying to the End.

Growing Corn in Cass County.

The Reason Why This Land Can Be Bought So Low

Do you know that lands in Southern Minnesota and Iowa now worth \$75 and \$100 per acre sold for \$4 and \$5 per acre not more than 20 years ago. The same is true of the timber lands of Southern Wisconsin. These Cass county Minnesota lands were until very recent years covered with forests. The lumber companies in some instances owned the land. It was only a short time ago that these lands were available for farming purposes. Now they are known as "cut over" lands—meaning the land from which the timber has been cut.

A large part of this country needs to be cleared of the stumps left from the cutting of the timber. Energy is needed—nothing else—to make a farm here worth just as much as a

farm in any of the older settled parts of the country. The soil is very rich. It is a sandy loam with a clay sub soil. There is plenty of water, the rain fall being about 40 inches. It makes the best dairy land in America. No one will question this statement who is at all familiar with this section. Clover and the tame grasses thrive as you never see them grow in Iowa or further south. Vegetables of all kinds grow so large that the counties of Central Minnesota always take the prizes at the State Fair.

Anyone at all acquainted with soils will realize how rich this land must be when he considers the fact that it was formerly covered with maple, elm, poplar, pine and basswood timber.

The forest fires have done much toward making the land easy to clear. There is just enough wood left for fencing and local uses.

There is never a crop failure in the timber country.

The lands lie in the famous Park Region which has been talked of for several years as the location for a National Park. There are no swamps or marshy lands. The drainage is excellent.

Facilities for marketing vegetables, produce and crops are exceptionally good. Railroads run all about and through this land and there are numerous settlements. Land values are advancing very rapidly. Our advice to you would be to get started to

buying your farm just as soon as you can.

We prefer for you to come and look the lands over. But as there are many who cannot come at once we have arrangements to describe and picture to you just what we have. If you have friends in Minneapolis, ask them to pick out your land for you—or ask them what kind of land we have. If you wish, we will pick out your land and hold it for you subject to exchange if not your preference. Our booklets which we send you free will tell you all about the farms, what is raised, how much and what kind of grain is grown on our lands and give you lots of other valuable information.

Don't Overlook the Splendid Investment Features of Acre Bonds. Your Money Secured by Real Estate and Drawing 5 per cent Interest. Even Though You May Not Want to Buy a Farm, You May Never Have Another Such Opportunity for a Safe Investment.

We have valuable and instructive booklets, maps, photographs, etc., etc., which we will be glad to send you. Write today—right now while you are thinking about it. Better still, send a first payment of \$10 and begin buying a farm now. We will send you a Bond on an Acre of land for your \$10 payment. There will never be a better time for you to begin on this plan to accumulate.

Wheat Growing in Cass County.

OUR SHEEP DEPARTMENT

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep to this office.

BABY MUTTON OR SPRING LAMB.

Spring lamb is an article of food that has sprung up only in recent years, but it becomes more popular each year and the demand now is large. At first spring lamb was in demand only in a few eastern markets, where a taste had been cultivated for this most excellent morsel, but later it spread until now baby mutton is found in all the large markets of the world. In speaking of the growing demand for this product the Shepherd's Criterion says:

"The proportion of lambs received at Chicago the first five months of the year was much greater than usual and is believed by many to be close to 80 per cent of the supply. At times it was much higher than that. This is indicated by the average weight of sheep and lambs as given out by the stock yards company. This weight was only eighty-three pounds for the five months, which was decidedly lighter than any previous year. Ten years ago the average for the same period was ninety-one pounds.

"The fact of the matter is the average weight has been steadily decreasing for a number of years because the proportion of lambs has been growing larger and of sheep smaller. This is certainly the age of baby mutton as it is of baby beef. Years ago there were no lambs received at this market at all except after the spring crop was available and as soon as they were exhausted everything was sheep. Now, lambs are greatly in the majority and are vastly better in quality than they were twenty years ago. If the consumption keeps growing in the future as it has in the past it will keep sheepmen busy getting enough lambs to fill the demand."

EXTERNAL PARASITES.

Sheep, like some nations, have their troubles without as well as within. They have external parasites as well as internal. Some have an opinion that ex-

ternal parasites only bother sheep that are poor or when they have run down in condition. Others think they only trouble sheep in the summer time. This is a mistake.

Three parasites trouble sheep externally. They are the scab mite, the sheep tick and the sheep louse. The first parasite mentioned is very small and can scarcely be observed by the naked eye. This parasite burrows under the skin and causes what is known as the scab, which is identical to the itch in the human family. No scab mite, no scab. No amount of neglect or ill-treatment can cause the scab unless the scab mite is present.

The tick is almost always present in flocks where dipping is not regularly attended to. Lice are not so plentiful as ticks, but when they are present they cause a great deal of uneasiness and irritation.

These parasites are all kept in check by resorting to a thorough system of dipping in the best commercial dips. Our best flock owners dip twice annually, once soon after shearing and again in the fall of the year. In some instances it is necessary to follow up the first with a second dipping about ten days after in order to get any parasites that may have hatched out after the first dipping. In dipping for scab it is most necessary to do the work in a thorough manner, as the scabs are thick and afford a safe hiding place for the mites. Lice and ticks are not so difficult to eradicate, although thoroughness in dipping will pay always.

A Book on Insects.

Prof. J. W. Folsom, of the University of Illinois, has recently prepared a comprehensive work of 500 pages on the subject of insects. This book is designed specially for students, but it will interest practical men who desire specific information concerning the structure, character and habits of insects. The table of contents will give a fairly clear idea as to the character of this book, one chapter being devoted to each of the following subjects: Classification, Anatomy and Physiology, Development, Adaptations of Aquatic Insects, Color and Coloration, Origin of Adaptations and of Species, Insects in Relation to Plants, Insects in Relation to Other Animals, Inter-relations of Insects, Insect Behavior, Distribution, and Insects in Relation to Man. This book comes from the press of P. Blakiston's Son & Co., Philadelphia, Pa.

LAKE AND RAIL TRIPS.

During the summer months the Chicago Great Western Railway sells tickets via all steamship lines on Great Lakes in connection with their line to Chicago, or St. Paul and Duluth. From this time until September is the time to sail the lakes and see Duluth, Superior, Isle Royale, the Copper Range, Sault Ste Marie, Mackinac Island, Detroit, Toledo, Cleveland, Erie, Buffalo, Niagara Falls and other points of interest. Call or write for full information. E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

HOMESEEKERS' EXCURSIONS.

CHICAGO GREAT WESTERN RAILWAY.

On the first and third Tuesdays of each month until November the Chicago Great Western Railway will sell homeseekers' tickets to points in Arkansas, Kansas, Missouri, western Louisiana, Mexico, New Mexico, Oklahoma Territory and Texas at rate of one fare plus two dollars for the round trip, except that a maximum rate of \$23.00 from Des Moines will be in effect to above territory with the exception of Mexico. Stopovers will be allowed in both directions. Limit thirty days, stopovers both ways.

On the first and third Tuesdays of each month until November the Chicago Great Western Railway will sell homeseekers' tickets to points in Arizona, Kansas, Missouri, Nebraska, Nevada, Utah, Wyoming, Alabama, Florida, Georgia, Kentucky, eastern Louisiana, Mississippi, North Carolina, Tennessee and Virginia at rate of one fare plus two dollars for round trip. These have limit of twenty-one days to return and allow stopovers on going trip.

On the first and third Tuesdays of each month until November, homeseekers' tickets will be on sale to Denver, Colorado Springs, Pueblo, at rate of \$23.00 from Des Moines and to Ogden and Salt Lake City at rate of \$29.50. Other Colorado points in proportion, all having limit of twenty-one days to return and allowing stopovers on going trip.

To points in Idaho, Montana and Washington homeseekers' tickets on sale the first and third Tuesdays of May, June, September, October and November at rate of one fare

Jayne's Tonic Vermifuge

gives rosy cheeks and active health to pale, sickly children.
And it is good for their elders, too.
Ask your druggist for it.

A DURABLE ROOFING

One which perfectly excludes water and wind, which is easy to lay, and lasts longer than others is the kind of roofing you want. Shingles are high priced and getting higher every year. Tin roofs. The best roofing is that made of felt and asphalt—but there is a great difference in how this felt and asphalt is combined. In

Huttig's Rubber Roofing

the felt is thoroughly saturated with Trinidad asphalt—more thoroughly in fact than any other having 150 per cent saturation as compared to 104 per cent in the best brands of other roofing. This thorough saturation makes Huttig's Rubber Roofing non-absorbing, impervious to frost, and a non-conductor of heat and cold. Keeps buildings warm in winter—cool in summer. Once laid, there is no deterioration or necessity for repairs for years. Anyone can lay it, as nails, caps and cement are packed in each roll. We make this roofing in four grades as to weight, but all of one highest quality.

WE WANT YOU TO KNOW ABOUT OUR ROOFING

You can use it not only for roofing, but also for the sides as well. Don't do any building this year until you investigate this roofing. It's sold by the best lumber dealers everywhere. Don't let your dealer give you something else "just as good." Insist on seeing Huttig's Roofing before you buy. If it isn't sold in your town write us for sample, and we'll see that you get our goods. We'll be glad to tell you about it and its uses. Address,

HUTTIG MFG. COMPANY,
MUSCATINE, IOWA

It comes in rolls with caps, nails and cement inside. This is it.

WE CURE
ALL MEN'S
DISEASES

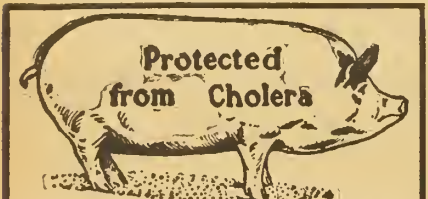

Reliable Doctors

WE are the oldest established firm of Specialists in all diseases and weaknesses of men in the west. We cure after others fail. This is why men travel across the continent to consult us. FIELD NOTES.

Ohio Chief pigs are offered for sale by Mr. F. A. Strong, of Orient, Iowa.
 Some good Duroc Jersey fall and spring boars are offered for sale by Messrs. A. B. Easter & Son, of Fremont, Neb.
 Two good Scotch Collie pups are offered for sale by Mr. E. Funke, of Greenfield, Iowa. The first man sending \$5 gets the choice.
 A sale of Poland Chinas is announced to take place at Maxwell, Iowa, on February 19th by Messrs. J. E. Hull and J. O. Thompson.
 Anyone wanting to engage the service of a competent and wide-awake auctioneer had better write Col. Geo. P. Bellows, of Maryville, Mo. He has a few fall and spring dates open yet.
 Hydrocarbon, for killing prairie dogs, sold by the Omaha Gas Company, of Omaha, Neb., at \$2.50 for half barrel, \$4.25 per barrel, does the work and the cost is so low that any farmer afflicted with these pests can afford to buy.
 Mr. Chas. M. Hulbert, of Oakland, Neb., the well-known Poland China hog man, has about the best lot of fall boars that he has ever raised. If any of our readers want a well-bred Poland China boar they should correspond with him at once.
 Messrs. A. B. Easter & Sons, of Fremont, Neb., advise us that they have sold their herd boar, The Auditor, to Mr. D. R. Cash, of Colon, Neb. They write that they still have two yearling boars by Orion for sale, and that their pigs are doing well.
 Messrs. Malcom V. Bolton & Co., of Cedar Rapids, Iowa, want a reliable, experienced land and exchange man to take charge of their farm and exchange department. Their advertisement offering a profitable position appears on page 14 of this issue.
 Read the Duroc Jersey advertisement of Mr. J. S. Teal, of Lamoni, Iowa, if you want the tops. He has pigs by Ohio Chief, Proud Advance, Ben Davis, first-prize Iowa State Fair boar, and other good sires. Write him at once, as the call is getting pretty brisk.
 The well-known Chester White breeder, Mr. J. S. Kennedy, of Blockton, Iowa, has an excellent crop of pigs this year. While not large in numbers, they make up in quality, and he will be in position this fall to cater to those who want a good Chester White pig.
 Mr. E. Z. Russell, of Blair, Neb., will make a public sale of Duroc Jerseys at his farm, near town, on October 1st. He will include two extra good yearling boars, besides a good lot of spring pigs. It will pay breeders to pay attention to his sale, as he will have some of the choice things of the season.
 Mr. Henry Dorr, of Remsen, Iowa, announces a Poland China bred sow sale for February 5th. He writes: "My hogs are doing fine. I never had a more even hunch of spring pigs at this time of the year. I will have fifty hogs for sale, fourteen of which are fall boars, and the remainder spring pigs."
 Mr. A. Edgar Davis, of Lincoln, Neb., notifies Homestead readers in his advertisement on page 14 that no matter where located, he can sell their farm, home or business and that he can do this in less than ninety days. He also asks that readers of The Homestead write, giving description and cash price of what they have for sale.
 Mr. F. A. Ham, of Saronville, Neb., is a breeder of Duroc Jerseys. This gentleman has had very good luck with his spring pigs and will now offer them to the public through our columns. You can expect good pigs when placing an order with this breeder. His hogs represent the blood of the noted families. Look up his advertisement and write for prices.
 An excellent place to secure Angus cattle is the Rosengift herd, at Kelley, Iowa. Quality Laddie and Keillor Victor 3d head the herd. Cows may be had in calf, also heifers and young bulls are ready to go. Better write today for the prices of Messrs. Rosengift & Siverly. They make them as low as consistent. Orders are carefully filled and satisfaction is their motto. On page 22 is the card. Look it over, Mr. Angus Breeder, and if in need of something good write this firm, mentioning The Homestead.
 Mr. Hugh Bates, of Orient, Iowa, one of the old-time Short-horn breeders who closed out his herd a few years ago, has again gone back to his first love and has about thirty head on hand headed by the Scotch bull, Golden Champion. This splendid breeding bull formerly headed the herd of Mr. Ernest Funke, of Greenfield, Iowa, and was considered one of the best bulls ever used in the herd. Mr. Bates has secured some very excellent females and it is his intention to have one of the very best herds in the state.
 With this week's issue of The Homestead begins the Duroc Jersey advertisement of Mr. F. A. Strong, of Orient, Iowa, one of the rising young breeders of the state. We have watched Mr. Strong's buying since he went into the business and have noticed that he invariably purchased the good things. At the Harding sale he bought Valley Lady, a daughter of Reed's Banker, and she farrowed thirteen pigs by Ohio Chief and saved ten. He therefore has some good Ohio Chiefs for sale and he would price one of these to any one who may write him. He also has litters by Keep On, the third-prize boar at Des Moines, and by Proud Advance and by W. L. A's Choice Goods. He has one litter by Parnell Banner, his present herd boar, out of Minnie Advance, a daughter of Proud Advance. Minnie Advance is out of Minnie Orion, a sow that Mr. George Estes paid \$205

SPENCER'S LATEST HAY PRESS INVENTION

Makes a 100-lb. bale with 2 feeds in less than a minute. A 14x18 Box Press—one feed to the circle. It cannot in a short test double the capacity of any other firm's make of two horse perpetual press making two or more feeds to the circle, no sale and freight required. Write for our free catalog.

J. A. SPENCER, Dwight, Ill.

for. Mr. Strong will make a public sale on October 5th, but anyone who wants a pig by Ohio Chief, Proud Advance or Keep On will do well to get in touch with him at once.

The firm of Messrs. C. Moore & Son, of Kellerton, Iowa, will make a public sale of Duroc Jerseys at their farm near town on October 12th. This firm have achieved considerable notoriety as successful corn breeders and have produced some new varieties that have met with favor. They have pigs sired by Proud Advance, and have an Ohio Chief sow in the herd. We will tell our readers all about their offering in a later issue.

Mr. Carl Hansen, of Herman, Neb., writes: "While I have nothing to sell at present, I am ready for orders to be delivered in September. I think the present crop of pigs are the best I have ever raised. Will be pleased to entertain visitors any time. I claim February 15th as my date for a bred sow sale." Mr. Hansen is one of the popular young Duroc Jersey breeders and has produced some good stuff, some of which have been prize winners at the state fair.

Mr. Fred Ruebush, of Good Hope, Ill., breeder of Chester White swine, whose advertisement appears on page 21, writes: "My herd is good and healthy, and doing well. I have some choice September and October boars for sale, and also several winter male pigs. I also have sixty head of March and April pigs now ready to ship. Could make some good selections from them. Have several yearling sows bred for September farrow; they raised good litters last year and proved good brood sows."

Mr. W. W. Wheeler, of Harlan, Iowa, writes: "I have decided to sell my Poland China herd boar, Surprise Wonder 5th 10367, bred by Mr. Peter Mouw, farrowed Nov. 20, 1904. He was sired by Surprise Wonder 4th 58993, dam Miss Longfellow by Chief Price, the 1,000-pound boar. He is a large, massive fellow, in good, thrifty condition and a great sire. I have a splendid crop of pigs by him, and if anyone wants size and bone they can get it in this boar. He comes from a strain of large Poland Chinas and his ancestry were all noted for their size, bone and quality. The first man to send \$50 gets him."

Mr. Howard Chandler, of Chaudier Bros., of Kellerton, Iowa, writes us from England that he is now getting ready to return with his purchases of Shropshire sheep. He writes that he has secured a majority of the winners at the Royal and other shows, in all classes, besides a large collection of breeding sheep of a much higher type than usually seen in America. Mr. Chandler is of the opinion that in recent years there has not been an importation to America which has included as many Royal winners as the importation he is now making. Shropshire breeders will hear this matter in mind and watch for the showing at various fairs by Messrs. Chandler Bros.

Messrs. Manlove Bros. and J. H. Norris, breeders of Duroc Jersey swine, of Bowen, Ill., have a new advertisement on page 20 of this issue of The Homestead. They announce that their spring crop of pigs are now moving out, and that they weigh about 125 pounds, and are in growing condition. These pigs are sired by Big I Am, Tip Top Notcher, Perfection Chief and other good boars. They also have Scotch Collie puppies for sale that are ready for work. They invite Homestead readers to write for description and prices, or they would prefer for those in need of Duroc Jersey pigs or Scotch Collie puppies to visit them and spend the day. See what they have to offer.

Two good Scotch bulls are offered for sale by Mr. G. P. Simpson, of Blockton, Iowa. One of these will be two years old next August, and is named Lancaster Lad 262183. He is a son of Baron Godoy and has for a dam Lancaster Belle by Bampton Bud. He traces to Imp. Mary Ann of Lancaster by Royal Lancaster, one of the best families known to Short-horn breeders. He is a red bull with a little white, is of the low-down, hocky type so well known to this family, and can be bought for \$150. Considering his breeding and individual makeup he is cheap, indeed, and he should make a good breeding bull. He also offers another young Scotch bull for sale, sired by Baron Godoy and out of a daughter of Scottish King. This calf is just turned a year old and belongs to the noted Daybreak family. Should any of our readers want a Scotch bull, they will do well to write Mr. Simpson at once. The latter bull is a deep red and if taken soon will be priced at \$125.

Messrs. Peterson Bros., of Lamoni, Iowa, will make a closing out sale of Short-horn cattle at Mt. Ayr, Iowa, on Thursday, September 27th, at which time they will dispose of one of the best herds in southern Iowa. This sale is made necessary because one of the brothers has disposed of his farm and in order to close the existing partnership they concluded to sell the entire herd. There will be over fifty head in the sale, including two imported cows, as well as several head of pure Scotch cattle. One of the best cows that will go into this sale will be Imp. Crescent 5th, bred by Mr. W. S. Marr and imported by Mr. W. D. Flatt. Her sire is Prince of Fashion, the pick of the 1902 crop of calves at Collyne, and he was sired by the great Scottish Archer. She is a grand, good cow and will sell with cow calf at foot by the pure Scotch bull, Stakeholder 163697. There will also be a yearling heifer in the sale out of her and sired by Stakeholder. The other imported cow is Princess Fame, bred by Mr. Wm. Ross, of Aberdeenshire, Scotland, and sired by Pride of Fame (195714). She will also sell with calf at foot

by Stakeholder Boy. The majority of the cows will be bred or will have calf at foot by Gay Hampton 212202, a son of the great Hampton's Best. This bull will also be included in the sale, as will also a pure Bates bull and several younger bulls. It will be a good offering throughout and we will notify our readers in due time of the various good things that will be sold in this dispersion.

Mr. Howard A. Chandler, of the firm of Messrs. Chandler Bros., of Kellerton, Iowa, sailed from Glasgow, Scotland, on July 7th, with sixty head of the choicest rams and ewes that have ever been imported to this country. There are thirty of each sex, among which are an excellent lot of Minton ewes, and the Nock ram lamb that was first in pen of five in the greatest show in Scotland. He also got the choice of the Cooper yearling ewes. In fact, he is bringing with him the pick of five of the best and most noted herds in Scotland. Messrs. Chandler Bros. have about eighty head of rams and ewes at home, among which are some that are good enough to go into any herd. If any of our readers want a good ram or a few good ewes they should write to the above firm at once. Kindly mention The Homestead when writing.

Mr. Ira A. Merritt, of Kellerton, Iowa, is one of the well-known Polled Durham, Short-horn and Poland China breeders of Ringgold county. He has some good spring pigs this year sired by M.'s Perfection and out of Columbia 5th, a daughter of the great sow, Columbia 2d. His fall pigs are sired by Black Tecumseh Jr. 97111. At the head of his Polled Durham herd stands Buttonwood Marshal 10th 235011, a son of the noted bull, Field Marshal, and out of the \$600 cow, Ohio Duchess, which was also the dam of Ruby of Buttonwood 1st and Ruby of Buttonwood 2d, that were winners wherever shown. He is just turned two years and is a bull of great scale and should round out into a 2,600-pound animal when matured. Mr. Merritt has about fifty head in the herd and he nearly always has something to offer for sale. He will be pleased to hear from any of our readers at any time.

The firm of Messrs. Peterson Bros., of Lamoni, Iowa, will make a public sale of Short-horn cattle at Mt. Ayr, Iowa, on September 27th, at which time they will offer fifty head of the tops of their two herds. The above is one of the most reliable Short-horn firms in southern Iowa, and we trust our readers will remember them on sale day. They will put cattle into this sale that any of our best breeders can afford to buy, and we will take pleasure in giving our readers a complete description of them in due time. One of the members of this firm also breeds Poland China hogs. He has a splendid crop of spring pigs, and he will be pleased to fill an order for a boar pig at any time. He has a grand lot of brood sows of the best strains now known to the breed. If you want a boar pig or a few choice gilts, just correspond with Messrs. Peterson Bros., and you will be treated right.

Mr. J. B. McAllister, breeder of Poland China hogs, of Palo, Iowa, writes: "The Poland China hogs are coming on fine. I have eighty head of spring pigs all sired by my great 800-pound hog (in show shape), K. S. T. C.'s U. S. 55611; his sire, T. C.'s U. S. 55609; his dam, Beauty 11736, by Bigger Lad 33989. He was used for four years in the fine herd of Messrs. Hokes & Son, of Williamsburg, Iowa, and has sired more prize-winning pigs than any one hog in Iowa county. His pigs have great, deep, broad hams and shoulders, besides excellent length and bone. Also will have between 300 and 400 Barred Plymouth Rocks of the celebrated Eclipse strain to offer Homestead readers. My advertisement in The Homestead the past winter was a profitable investment, as I sold clear out of Poland China gilts and male pigs and had to return orders that I was unable to fill. One man who saw my advertisement in The Homestead came and saw my pigs and bought eight head of bred sows before he left."

Mr. Robert Pritchard, of Carroll, Neb., the man who paid \$275 for a son of Combination at the W. A. Kirkpatrick sale last fall, points with pride to sixty good pigs sired by this hog this year. He christened him Welsh Vanderbilt 40567. He is a grandson of the noted Belle's Chief. One of the best litters by the above boar is out of Lady Macbeth, a daughter of Olympus, the boar that won first at both the Iowa and Minnesota State Fairs in 1899. There were twelve pigs in this litter and she is raising ten. State Maid, a two-year-old daughter of Ohio King, and out of the sweepstakes sow, W.'s Choice, has six pigs by Gay Advance, and another good sow called Pritchard's Choice has eight good pigs by Golden Star. He also has two good daughters of old Pericles, one with a litter by Cedar Lawn Model, and the other with a litter by King James. Mr. Pritchard will make a public sale at his home near Carroll on January 22d, at which time he expects to put in only the best of this year's crop of pigs, together with six good brood sows. Our readers will do well to remember him on sale day, because he will have something good to offer.

That old, reliable breeder of Short-horn cattle, Mr. E. Funke, of Greenfield, Iowa, has been kept pretty busy this season caring for as good a crop of calves as were ever dropped on the farm. These are mostly sired by Golden Champion, his former herd bull, now at the head of the herd of Mr. Hugh Bates, of Orient, Iowa. His new bull, Nonpareil Perfection 206667, has matured considerably since Mr. Funke purchased him. While not carrying as much flesh as when he bought him, he is nevertheless developing into one of the great bulls in the state of Iowa. He is a dark roan and is a son of the great Nonpareil Victor and is therefore a half brother to the noted prize-winning bull, Nonpareil of Clover Blossom. This grand young bull was a winner at the leading fairs last fall and was afterwards sold to Mr. Funke at just around the \$1,000 mark. His first calves will be due in a couple of weeks and his owner expects great things of them. One of his sons is in another leading herd and bids fair to be out at the shows this fall. He is a richly-bred bull and belongs to the well-known Nerissa family that has produced so many good show cattle. Mr. Funke has a grand lot of females in his herd, and is particularly strong on Victorias and Acanthas, besides having a number of Orange Blossoms, Lavenders and other good

Scotch tribes. He recently purchased two good cows at the Lowden sale, one in calf to the great Ceremonious Archer. He has a splendid young Victoria bull for sale, a son of Golden Champion and out of Victoria Funke 2d. He is an excellent calf, being one of the best-quartered calves we have seen this season. He is for sale if anyone wants him. Write Mr. Funke about him or go and see him.

The experience of a prominent breeder of Hereford cattle near Attica, Ind., may prove of interest to many other stockmen. This gentleman for a number of years has used a Bowsher "Combination" belt power mill at his home farm and ground all the feed for his cattle. Last winter he fed 100 head of cattle at a farm some twenty miles distant from his home farm and attempted to do it on whole grain. He writes us that he fed 2,500 bushels of ear corn with practically no gain. He then put in a No. 19 Bowsher Geared Sweep Mill on this distant place, and had a gain of 185 pounds per steer in the next forty-five days. He put off buying the mill until April, and his experience is a pretty conclusive evidence of the value of ground feed. If anyone cares to have the name of the feeder to make certain that these statements are correct, they can secure the address by sending to the E. N. P. Bowsher Company, South Bend, Ind.

Mr. Ed. Holmes, of Bedford, Iowa, the well-known Poland China breeder who, it will be remembered, showed the great boar, Mo. Perfection at the Iowa State Fair last year, has a nice crop of pigs again this season and he will make a public sale some time in September. The majority of his pigs are sired by Big Shamrock, a son of the noted boar, of Mr. Harvey Moats, of Villisca, Iowa. He has litters by Mo. Perfection, Giant Killer, a son of that famous old brood sow, Giantess, and by P. W. Perfection, as well as several litters by R.'s Claud, one of the best-known boars in southern Iowa. Many of the breeders will remember Mo. Perfection at the state fair last year. He was barred from showing because of a severe freezing he received during the winter, and the judge said he would rather bar him from showing than to give him a poor ribbon, as he considered him one of the greatest hogs ever seen on the Iowa State Fair grounds. He has reduced him in flesh and has been using him and anyone can see his pigs that will go to the farm. Mr. Holmes will be at the fair again this

fall, and a number of his get. I will also include a few choice spring hogs of February and March farrow by Perfection I Know 2d, the second-prize under year pig at Des Moines last year. Keep your eye out for this fellow in the junior yearling class at Des Moines this fall. He will make the boys go some. Tell all the boys who want to inspect my show herd that I will be found in barn No. 1 where I will be glad to give them all the glad hand and show them what I have."

Mr. Z. I. Grout, of Tingley, Iowa, is one of the progressive young Duroc Jersey breeders in the southern part of the state, and he has a splendid lot of spring pigs, numbering about 120. Nearly all of his stuff is sired by Proud Advance and Perfection Chief, two of the best-known boars ever shown at the Iowa State Fair. Mr. Grout has a bunch of pigs that are going to attract the best breeders this fall, and we do not hesitate to say now that his fall sale will contain some choice plums. He will be at the fair this fall, where he will show a daughter of Proud Advance that is one of the most perfect and one of the best daughters ever sired by him. This sow is one of the "peaches and cream," as Mr. Frank Iams would say, of the season, and she will undoubtedly get a pleasant look when the ribbons are passed around. He also has a good two-year-old sow that he will show, and he may take along a few pigs. Mr. Grout will make a public sale on October 17th, at which time he will sell the tops of this year's raising, and any who want Perfection Chief or Proud Advance sows and boars will get a chance to buy one in this sale.

MORRIS' DUROCS.

One of the younger breeders of Duroc Jerseys is Mr. W. E. Morris, of Dwight, Ill. He has selected some very good sows from the different herds in his section of the state and has a nice lot of spring pigs. At the head of his herd he is using a boar called Sir Thomas 44997 by Ely's Choice 26005 by International 8795 (A.), dam Lucy D. 24776 by Red Cloud B. 5971. This boar has proved a very potent sire and the spring pigs sired by him will go into good herds. A litter by him that should attract attention is out of Alberta 88610, sire by Roderic 13149 (A.), dam Villa V. 70034 by Warren Wonder 12249. There are five boars and two sows in this litter. A sow by Frank's Choice (a boar used at the head of Mr. Frank Erschen's herd) and out of Nellie B. 105734

WANTED

SOME CASES of LUMPY JAW

A NEW and effective remedy has recently been discovered for Lumpy Jaw in Cattle. In order to give it a more thorough trial the name and address of parties who have Lumpy Jaw in their herds is desired. The first ten applicants will be furnished free treatment. Address,

LOCK BOX 1120, DES MOINES, IA.

fall with some good show sows and he will be pleased to meet the boys there. He is a good feeder and a good care taker and he always puts up a good offering and his September sale promises to be one of the good ones of the fall season.

Mr. C. F. Robe, of Jesup, Iowa, in sending in change for his advertisement which will be found on page 22 of this issue of The Homestead, writes: "I have some very choice broad-backed, long-bodied, heavy-boned, smooth fall gilts and a few top males yet for sale. Also some good spring pigs of the same kind that will do some one good and will be sold worth the money. Have a few good bull calves for sale, sired by Archer 209427 which I am offering for sale. He is four years old, weighs over 2,300 pounds in his present breeding trim. He is a pure Scotch bull and good enough in breeding and individual merit to head almost any herd. I have used him as long as I profitably can and will sell him worth the money. Come and see them. You will not be disappointed."

The old, reliable firm of Messrs. Jordon & Dunn, of Central City, Iowa, place a card in our Short-horn columns this week of the Maine Valley Scotch Short-horns. This is the establishment that bred and furnished the nucleus of all the famous Nerissa family of Short-horns in America. Mr. H. D. Parsons' \$4,000 Nonpareil King was of this family; in fact, the granddam of Nonpareil King was bred by Mr. Chandler Jordon. Among the earlier great Cruickshank bulls used at Maine Valley were Imp. Stanley, Imp. Confessor, Imp. Lauderdale and Imp. Anchorite. After the use of these bulls came several American-bred Scotch bulls, and now Imp. Golden Fame is doing most excellent service. At this writing only four bulls of serviceable age are on hand. All are pure Scotch, however. One is three years old and is a splendid bull. He was sired by Prince Nonpareil and is out of a Mina cow. He is all right in every way, but many of the breeding cows are his half sisters, hence Imp. Golden Fame must be used to the exclusion of the Mina bull. He is held at \$500. The other three bulls are yearlings and all are reds.

Mr. Geo. H. White, of Emerson, Iowa, one of the foremost breeders and show men in the state, writes: "I had very bad luck last spring on account of wet and cold weather, but I saved thirty-five pigs and they are doing fine. I also have twenty fall sows of August, September and October farrow and they are doing well. I also have three good fall boars as I have ever raised, sired by a son of Corrector, and their dam is a daughter of old Chief Tecumseh 2d. These three boars will be included in the White-Metzger sale at Council Bluffs, Iowa, on September 15th. Both Mr. Metzger and myself are putting in twenty-five of the tops of our herds in this sale. I am putting some of the best hogs I have ever sold into this sale. Among them will be Contractor, the third-prize under year boar at Des Moines last

fall, and a number of his get. I will also include a few choice spring hogs of February and March farrow by Perfection I Know 2d, the second-prize under year pig at Des Moines last year. Keep your eye out for this fellow in the junior yearling class at Des Moines this fall. He will make the boys go some. Tell all the boys who want to inspect my show herd that I will be found in barn No. 1 where I will be glad to give them all the glad hand and show them what I have."

One of the best and one of the cheapest paints ever used on the farm is refined tar, manufactured by the Omaha Gas Company, Omaha, Neb. For dipping fence posts or shingles, painting barns, poultry houses, hog and cattle sheds, iron tanks of any kind, it has no equal. It destroys all disease germs and is a great aid in keeping live stock in a healthy condition. A barrel only costs \$4.25; half barrel, \$2.50. Write the Omaha Gas Company, Omaha, Neb., for further particulars and please mention this paper.

F. ALLDRITT OFFERS ROYALLY-BRED DUROCS.

You will notice the advertisement of Mr. F. Aldritt, of Friend, Neb., on page 20. This herd represents the blood of some of the richest families of the breed. The owner has about 150 pigs sired by such boars as Ohio Chief, Billy K., Higgins' Model, a full brother to Crimson Wonder, Improver 2d, and many more of the royally-bred ones. Mr. Aldritt has given his pigs the necessary care and has them in fit condition to give the purchasers good results. These pigs will be priced worth the money and you can expect fair treatment. He also has a few good fall boars that will be priced very cheap in order to close them out. If you want the good blood lines you can find them here. Mention The Homestead when writing.

PREVENTING DISEASES IN LIVE STOCK.

The attention of our readers is called to a booklet recently published by Parke, Davis & Co., of Detroit, Mich. It deals with the prevention of live stock diseases by the use of a scientifically prepared disinfectant. This firm manufacture Kreso Dip, a product well known by a very large number of subscribers. It is a coal tar product, but does not contain carbolic acid and therefore is never corrosive or irritating. A 1 per cent solution of Kreso Dip will destroy lice, mange and all skin diseases, and in addition it tones up the skin and contributes to health generally. It contains soluble sulphur and practically every live stock man is somewhat familiar with the virtues of sulphur. It is doubtful if any single element that enters into the composition of foods or medicines possesses the virtues of sulphur, and as Parke, Davis & Co. have been able to bring it into soluble form and to hold it in solution they have placed themselves in a position to supply to the public an invaluable

Horse Owners! Use GOMBAULT'S Caustic Balsam

A Safe, Speedy, and Positive Cure

The safest, Best BLISTER ever used. Takes the place of all liniments for mild or severe action. Removes all Bunches or Blemishes from Horses and Cattle. SUPERSEDES ALL CAUTERY OR FIRING. Impossible to produce scar or blemish. Every bottle sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars. THE LAWRENCE-WILLIAMS CO., Cleveland, O.

PILES

AND FISTULA

NO MONEY to pay UNTIL CURED.

I TREAT and cure permanently by mild and painless methods, all diseases of the Rectum, such as Piles, Fistula, Fissure, Ulcer, etc. I do not use the knife nor put you to sleep with Chloroform or Ether.

I guarantee a cure and take no money until cured and satisfied.

Protection for Life—Every case when cured and discharged is given a written "Legal Guarantee" of cure which provides for Free Treatment at any time during life, should further treatment ever be needed. In other words, "I agree to keep you cured."

Write me full description and I will send New Illustrated Book Free. Also letters from hundreds of cured Iowa patients.

Write these cured patients:

product. Many diseases of live stock are discussed in this booklet, notably worms, ringworm, contagious abortion, destruction of lice, calf cholera, mange, thrush, galls, etc. This booklet will be furnished free to all of our readers upon application to Parke, Davis & Co., Detroit, Mich., mentioning The Homestead.

GLENGARY HERDS.

We present this week a fair likeness of Mr. John Schrotberger, of Gardner, Ill., the senior member of the well-known firm of Messrs. John Schrotberger & Sons, breeders of Red Polled cattle and Duroc Jersey hogs. Quality and not quantity has been the basis upon which the Glengary herds were founded, and have been maintained. We wish to speak first of the Red Polled herd. The foundation was well laid along correct ideas, stock from the

MR. JOHN SCHROTBERGER, GARDNER, ILL., BREEDER OF RED POLLED CATTLE AND DUROC JERSEY HOGS.

best herds being secured of the fashionable, profitable families. At the head of the herd is the yearling bull, Josephus 3d. At eleven months of age this bull weighed 1,000 pounds. He has plenty of size, combined with smoothness and quality. His dam has a record of fourteen pounds of butter in a week. Something of the prolificacy of the females in the herd is seen in the get of Ohio Miss 6613 (P. 6). There are in the herd from this cow two heifers and a bull calf, and one of the cows out of Ohio Miss has a heifer calf and is due to drop a heifer calf at once. One of these heifer calves Messrs. Schrotberger intend to show. She is by Commodore 11373, second-prize bull as a yearling at the International in competition with seven others. This calf will if properly fitted bring much credit to the herd. An extra good bull calf out of Ohio Miss by Commodore is offered for sale. He is the making of an excellent herd bull and should not be overlooked by some breeder in search of a herd bull. Messrs. Schrotberger will be pleased to have breeders inspect their herd of Red Polls. The Duroc Jerseys represent the blood of the most popular families. The herd boar is called Perfection J. K. 32105. He was sired by Allison Jr. Perfection 9783 (A.), dam Owaneco Belle 70362 by Gold

PILES

FISTULA--NO MONEY TILL CURED

MR. STEPHEN KNIGHT, COLUMBUS JUNCTION, IA., WRITES: "I was afflicted with Piles for twenty years and five years of that time was not able to work. You treated me for this trouble about five years ago and I am now perfectly well."

All diseases of the rectum treated on a positive guarantee and no money accepted until patient is cured. Send for free 352 page book, a treatise on rectal diseases and hundreds of testimonial letters, valuable to anyone afflicted. Also our 132 page book for women. Both sent free. Chief 18937. This sow is a half sister to the first and championship boar at Illinois State Fair 1904, Gold Cloud, both being sired by Gold Chief. All of the spring pigs are by this boar. Fannie Beatty 116752 by Gem's Top Notcher 34039 by Top Notcher's Rival 13593 (A.), dam Fanny 83808 by Thornton's Choice 25293 is the dam of a very good litter of six, four sows and two boars. Binnie D. by My Michigan 17409, dam Lady Dwight 44582 by Improver 14125 has a nice litter of five extra good pigs. A daughter of Binnie D., called Amelia 75284, has a very good litter of seven. Although Messrs. Schroterberger lost this sow they saved seven out of twelve pigs farrowed. A good fall boar by Perfection J. K. and out of Amelia is offered for sale at a reasonable figure. Two litter sisters to this boar are also offered at this time. Messrs. Schroterberger will be pleased to have breeders inspect their herds and will price their stock worth the money, considering breeding and quality. Write for prices and other information, kindly mentioning The Homestead, as per the announcement on page 24 of this issue.

DOUBLE STANDARD POLLED DURHAM CATTLE.

Our readers are always interested in knowing where to buy the best cattle and, for that matter, the best of everything. The firm of Shaver & Deuker, of Kalona and Wellman, Iowa, are unquestionably well prepared to supply the ever-popular Polled Short-horn or Double Standard Polled Durham, as they are generally known, cattle that can be recorded in the Polled Durham Herd Register and in the American Short-horn Herd Book. Since the consolidation of the Shaver and Deuker herds Iowa commands a rank second to none in America and is in fact headquarters for strictly first-class cattle of this very popular hornless breed. A large percentage of the herd are Scotch cattle, including Imp. Scotch cows, one of which is by the champion bull, Marengo. This firm will be at Iowa State and other western fairs with an aged herd this fall. Roan Hero, the winning bull calf and yearling, is now a worthy candidate for two-year-old honors and if he is not successful the West will see a better two-year-old than has yet been shown. Arcadia Duke 3d will show as a calf and is a hard nut to crack. He is a rich dark red roan, chock full of feeding quality. He was sired by old Tippecanoe 44th and out of a Bates Duchess cow. He is about right all over and weighed 960 at eight months old. The best yearling Scotch Polled Durham bull of the entire eastern lot of great bulls has been purchased for delivery September 1st. This gives this firm three of the best bulls of the breed. In addition they have a large number of their 100 cows bred to Athenian Prince and the Scotch bull, Secret Knight. Recently they have made heavy shipments to Nebraska and South Dakota.

TIP TOP NOTCHER SELLS FOR THE RECORD-BREAKING PRICE OF \$5,000.

Readers of this paper interested in Duroc Jerseys will be pleased to know that Mr. Geo. W. Seckman, of Ripley, Ill., has sold Tip Top Notcher, his noted herd boar, to Messrs. Fagan, Browning, Hess & McCabe, of Hersman, Ill., and Messrs. Thomas & Hogsett, of Golden, Ill., for the record-breaking price of \$5,000. The following letter was received from Mr. Seckman during the past week: "Ripley, Ill., July 7, 1906. Homestead Company, Gentlemen:—I have today completed the sale of the greatest wonder of the Duroc age, the most phenomenal Duroc Jersey boar, both as a breeder and a hog, living or dead. Tip Top Notcher 20729 sells for \$5,000, the highest price ever paid for a Duroc Jersey. He goes to head the great herds owned by Messrs. Thomas & Hogsett, of Golden, Ill., and Fagan, Browning, Hess & McCabe, of Hersman, Ill. Those high-minded, enterprising gentlemen believe in planting the seed of champions and raising grand champions, and the purchasing of the grand champion, the premier hog of the breed, Tip Top Notcher, places their herds at the head of the list of the Duroc world, and had it not been my intention, as previously announced, to close out my entire herd and retire from the breeding business, a much larger sum would not have bought this great sire. The record made by Tip Top Notcher as a show hog, a breeder and in weight has never been equaled by any hog of any breed, living or dead, and I predict, never will be approached. Tip Top Notcher in 1903 won first at Springfield and American Royal when under one year old, then at the great St. Louis World's Fair in 1904, when matured as a yearling, weighing 1,120 pounds, in the greatest show ever seen in the history of the world, he won first in class, champion boar and grand champion boar. On him and seven of his get I won twelve prizes—nine class prizes and three medals and diplomas, including champion herd of Illinois. In 1905 Tip Top Notcher sired five pigs that were good enough to go into five state fairs and win eight blue ribbons. He sired the first Duroc sow to ever sell for \$1,000, and also sired the highest-priced litter ever produced of the breed; and as has often been said before, Tip Top Notcher is a wonder in a class by himself. As premier hog of the breed he has the size, quality and finish, and transmits it to his get. The world's greatest live stock artist and expert judge, Mr. Harry Spurling, says of Tip Top Notcher when sketching him at my farm June 23, 1906, 'He is the best Duroc Jersey boar I ever saw, having more quality, style and size, and as a sire of first-class stock.' Nothing more for sale now. On October 24th I will close out my entire herd of over 200 head, the cream of the breed. I give every breeder, every lover of high-bred stock, a special invitation to visit me on or before this date and inspect my herd and spend a day at the Gold Dust Stock Farm." These two firms of Duroc breeders are to be congratulated upon such a valuable addition to their already strong

herds. They deserve the support of every breeder and farmer throughout the middle West who is interested in Duroc Jerseys.

CURED SPAIN OF TWO YEARS' STANDING.

Mr. S. O. Tynes, of Moorings, Va., writes the Dr. B. J. Kendall Company, of Enosburg Falls, Vt., as follows: "I have used your preparations and have been well pleased with them. I had a horse with bone spavin of two years' standing. I used one bottle of your spavin cure, and he has not been lame in three years." See advertisement on page 8.

F. A. EDWARDS SELLS A GREAT BULL.

Mr. F. A. Edwards has recently sold to Mr. F. P. Helmick, of Webster City, Iowa, the exceedingly good Cruickshank (Broad-horns) bull sired by Duke of Oakland 2d. The dam of Mr. Helmick's purchase is Imp. Fair Duchess, the best cow at Bluffview, and one of the very best in America. She is of the same family as the great Imp. Lovat Champion, now owned at Flynn Farm, Des Moines, Iowa. Mr. Helmick is to be congratulated on the wisdom of his purchase, and Mr. Edwards on producing such a bull.

TAFF CAN SELL YOU A DESIRABLE FARM.

On page 14 will be found the initial advertisement of Mr. David P. Taff, the land man of Topeka, Kan. Mr. Taff is today one of the large real estate dealers in America and with his system of co-operation with real estate dealers throughout the United States he is in a good position to handle large volumes of business. He is energetic and up to date and makes a business of selling land and furthermore he sells it. If you want to buy or sell property or business of any kind, anywhere in the United States, it will pay you to write him.

A GOOD SCOTCH HERD BULL FOR SALE.

Messrs. G. P. Tyrrell & Son, of Oxford Junction, Iowa, are offering a strictly choice red Scotch bull called Eureka. He weighs nearly 1,200 pounds, was sired by Sittytton Sort and out of a splendid cow that traces to Mr. Cruickshank's famous Flora family. He carries some of the best and most fashionable blood known to the breed, and with all is a grand, good individual. He is priced at \$400, which is a reasonable considering the breeding and intrinsic worth. They have a splendid red roan Scotch-topped bull of the Nelly Bly family at \$125 and some good red yearlings at \$100 each. This firm can boast of having 150 early Duroc Jersey pigs for the market. They are all pedigreed stock. Messrs. Tyrrell will be pleased to answer all our readers' questions concerning any and all of this stock.

PROTECTION FOR LIFE.

Many people who are cured of disease afterwards wonder if the cure is permanent and if perhaps some time in their life they will not be troubled again with the dread disease which they have been cured of. To such of our readers who are troubled with piles we would ask that they read the advertisement of Dr. Josiah Johnston, on page 18 of this issue, in which he agrees to give a written legal guarantee to cure all his patients and keep them cured for life, and his guarantee is good. Dr. Johnston tells us that out of 700 cases which he has cured he never has had but two who have even come back to him for further treatment. This certainly speaks well for his methods in curing piles, and any of our readers so afflicted will find it to their interest to write Dr. Johnston at 512 West Walnut St., Des Moines, Iowa, for full particulars as to his methods of treatment.

KNOCKS OUT LIGHTNING.

No one likes to take chances with lightning. It is better to be safe than to be sorry. A new danger from fire has been introduced by putting telephones into so many farm homes. But this danger is entirely overcome by the "No-Risk" cut out, manufactured by W. E. Ashby Telephone Cut Out Company, of Chariton, Iowa, and advertised on page 2 of this issue. This simple device attaches outside the house and by pulling out a small rod that runs through the wall the telephone is cut out as absolutely as if the line didn't come within a mile of the house. Its slight cost makes it the cheapest kind of insurance. Severe thunder storms are so prevalent at this time of the year that no one having a telephone in the house ought to take any chances. Refer to the advertisement and write today to W. E. Ashby Telephone Cut Out Company, Square street, Chariton, Iowa, and mention this paper in doing so.

AN OPPORTUNITY FOR YOUNG MEN ON THE FARM.

To the young man on the farm who is anxious to make a place for himself in the world; to advance from drudgery to a position of dignity and good pay: We wish to call your attention to the advertisement of the celebrated Gem City Business College, found on page 10 of this paper. This noted educational institution has been in successful operation and under the same management for the past thirty-six years and has been counted as one of the leading commercial schools of America. Its success is largely due to the fact that its graduates are ready for actual business when they leave this school. This comes from the fact that they have acquired their knowledge by actually performing business work and not by memorizing text books. All over the country are to be found graduates from this school in good paying positions because they are qualified to fill them. If you are interested in securing a business education that is thorough and at a moderate cost, you should send for their sixty-four-page catalog published by this school. In their advertisement you will see they teach all the modern business branches. Suppose you write today to Pres-

ident Musselman, 205 Musselman Building, Quincy, Ill., for their catalog and see how easy it is to get a good business education at this school.

DISINFECTING DAIRY QUARTERS.

Unless special precautions are taken to make dairy cows comfortable during the next two or three months there will be but a small profit realized on their products. If for any reason cows are lousy or their skin is unhealthy the food consumed is practically wasted. A 2 per cent solution of Zenoleum; that is, two parts Zenoleum to 100 parts warm water, will immediately destroy lice and contribute to general healthfulness of the skin. It will also kill contagious and infectious disease germs, such as cause abortion and other diseases in cattle, as well as scours and white cholera in calves. Zenoleum ought to be used around dairy barns at least once a week. It kills foul smells, purifies the air and leaves the atmosphere fresh and sweet. Forty-two agricultural colleges and experiment stations, as well as numerous veterinarians, stock breeders, dairymen and farmers have found Zenoleum to be an effective lice killer and germ destroyer. All druggists sell Zenoleum.

OSBORN'S DUROC JERSEYS.

Among the many breeders in the state of Iowa who have been rapidly coming to the front is Mr. O. E. Osborn, of Weston. Few breeders have enjoyed a better reputation and his straightforward and business-like way of dealing with his patrons has won for him an enviable reputation among all with whom he has come in contact. He has been seen at the leading fairs the last few years where he has secured a fair share of the prizes. His great sow, Red Lady, was a winner of first and sweepstakes at the Iowa State Fair in 1904, and he also won out in several other classes. His reputation, however, has become widespread because he now owns a half interest in the great boar, Ohio Chief (the other half being owned by Mr. R. J. Harding, of Macedonia, Iowa, and he is today considered one of the greatest boars known to the Duroc Jersey breed. Sows bred to Ohio Chief in the last Osborn sale averaged \$300, which testifies to his merits as a sire, and to Mr. Osborn's good judgment in the selection of a boar to head his herd. He has about 100 pigs now on the farm and a goodly portion of these are Ohio Chiefs. Among the number are two litters that he will fit for the fairs and the boys will have an opportunity of seeing them at the fall shows. Mr. Osborn has another good boar in Crimson I Am, a son of Crimson Wonder, that in some respects will beat his illustrious sire. He has some pigs by this hog, some by Indicator, Top Notcher Again, Briggs' Prince and Carroll Boy. The two best Ohio Chief litters are out of Nancy, the dam of his best litter last year, and the other out of Lady Harris, a daughter of old Duroc Challenger. He has forty-five head of fall stuff, among which are some good things. He will be out with a show herd and says to have them all be sure to come around and see what he has at fair time.

NOTABLE NEBRASKA SALES OF SHORT-HORNS.

As announced, Mr. W. C. McGavock, of Springfield, Ill., will sell Short-horns at Geneva, Neb., on Tuesday August 7th, and at Grand Island, Neb., Saturday, August 11th. Mr. McGavock has had more experience in selling pure-bred cattle than any man in America. He has a most extensive knowledge of pedigrees and is a practical cattleman in every sense of the term, having performed every part of the business. He has been herdsman, herd manager, breeder and salesman and no one is stronger equipped for the work he is carrying on. He has made record-breaking auctions, selling a bull for \$9,100 and a heifer for \$6,300, and averaging on some forty head the splendid price of \$1,177. Mr. McGavock claims that he has never sold such an offering of Short-horns as will go under the hammer at Geneva on August 7th. The fifty head he includes have all been personally selected by him and as he is thoroughly posted on type and sale ring requirements, no man is better fitted to do it. Twelve of the fifty head are Scotch cattle and of the best Cruickshank families, and eleven of these Scotch cattle are superior cows and heifers and the other one is the grand show and breeding bull, Bapton Glover 213104, bred by Mr. J. F. Prather, of Williamsville, Ill. He is a three-year-old, sired by Imp. Bapton Sovereign and out of a dam by the famous Forbes stock bull, Baron Glover. A dozen of the get of this bull will be sold with him, and it is rare that such a bull and his get are included in an auction. Mr. I. W. Baughman, of Edinburg, Ill., consigns the bull to the auction because he is dispersing his herd, and Mr. McGavock has secured the tops of it for this auction. Four of the cows and heifers included are Cruickshank Orange Blossoms and the others are of standard families sired by such bulls as Imp. Sovereign and Imp. Bapton Sovereign. A number of the females were bred by the noted breeder, Col. T. B. Hart, of Edinburg, Ill., and they would simply not be for sale but for the fact that Mr. Baughman is closing out his herd and leaving the farm. One of the choicest consignments ever sent into a sale ring is that from the herd of Mr. C. H. Giller, of White Hall, Ill. There are sixteen head of very superior young cows and heifers, six of which are Scotch, descending from the Cruickshank Butterly cow imported by the illustrious James I. Davidson, of Canada, and topped out with the most noted of Scotch hulls. There are some splendid show cattle in this consignment and grand show herds, both old and young, can be picked from this Geneva auction. Useful cattle will be the rule in the Grand Island sale. The hulls will be good and strong, with the bone and scale required by western cattlemen, and the cows and heifers will be of same type. Mr. Edward N. Hurley, of Wheaton, Ill., is sending the best of his herd

to this auction including fourteen cows and heifers and his stock bull, Diamond Jim, by the celebrated bull, Bapton Diamond. Mr. McGavock will take pleasure in mailing catalogs to all applicants.

TAYLOR'S DUROC JERSEYS.

Mr. W. J. Taylor of Dwight Ill. has made a good start in the breeding of Duroc Jerseys. He has not tried to raise a large number of pigs, but what he has bred for has been the growthy, uniform, quick-maturing sorts. At the head of his herd he is using a boar called Sport 47339, he by Big King 12641 (A.), the boar used with much success by Messrs. E. H. Deal & Son and Fred Schweizer, of Elwood, Ill. The dam of this boar is Jennie Lind 33252 by Paul Kruger 6147. This boar was out of a litter of twenty-one farrowed. Lady Alice 119228 by Proud Advance 23549, dam Amy W. 70906 by Orion 5293 has a fine litter of ten, five boars and five sows, by Sport. An examination of the pedigree of this sow shows that no better blood can be found than she possesses. Two daughters of this sow, sired by Dumont, a prize-winning boar at the Illinois State Fair, have good litters by Sport. Mr. Taylor will be pleased to furnish prices and descriptions of the boars in his herd of spring farrow to readers of The Homestead, and we are pleased to recommend his herd to our readers. In writing please mention The Homestead.

THE BOTNA VALLEY HERD OF CRIMSON DUROCS.

One of the most conspicuous herds of Durocs today, and one of the most noted in the United States, is the Botna Valley Herd, owned by Mr. R. J. Harding, of Macedonia, Iowa. This herd has been made famous because there stands at the head the greatest boar of the breed, the king among kings, Ohio Chief 41419. Here is also owned the noted sweepstakes sow, Nebraska Belle, for which Mr. Harding paid \$600 and afterwards refused \$2,500. Then he also owns Proud Lady, for which he had to put up \$1,275, and she stands today the highest-priced sow of the breed. She is a daughter of the great boar, Proud Advance, and she has one of the great litters of the year by old Orion. She is conceded to be the greatest sow ever sired by Proud Advance. She was shown last season at the Iowa State Fair in the six months and under year class. She was three days too old to show in the six months' class and therefore had to show against sows twice as old as she, and in spite of this great handicap she got third prize. Ohio Chief is assisted by Brighton Wonder 34723, a full brother to Crimson Wonder, Belle's Perfect King, a son of the great Nebraska Belle and Addy's Top Notcher. Mr. Harding has a splendid lot of pigs this season by Ohio Chief, Orion, Proud Advance, Glendale Critic, Brighton Wonder, Indicator, Belle's Perfect King, Addy's Top Notcher and a few litters by other well-known boars. He has unquestionably the best lot of pigs he ever raised, and his sale on October 3d promises to be one of the greatest of the year. There will be no sale this fall that will have such an array of breeding and Mr. Harding authorizes us to say that he will guarantee every hog sold in his sale. Breeders who want a boar this year should remember Mr. Harding and his sale on October 3d. He will have some of the top pigs of the year.

GEO. L. BELCHER TO DISPERSE SHORT-HORNS AND TROTTER-BRED HORSES.

On account of the health of his family, Mr. Geo. L. Belcher, of Carrollton, Mo., one of Missouri's most enthusiastic breeders of Short-horn cattle and trotting-bred horses, finds it necessary to leave the state and quit a business that he is especially adapted to and in which his faith has ever been strong. Mr. Belcher, like all good breeders, was always ready to back his judgment and when laying the foundation of his herd and stud he selected the animal and bought regardless of the price. This shows the true breeder's spirit and it is to be regretted that the change will take from Missouri one of those the breeding fraternity can ill afford to lose. Mr. Belcher will on the morning of Wednesday, August 8th, at 10 o'clock, sell his trotting-bred horses. These are largely the get of Norberry 23743 with a record of 2:17 1/4, and Atora 2:09 3/4, sire of the dam of the great mare, Maud S. They are an unusually good lot of useful horses and mostly young. The brood mares have been regular producers and mares will be shown that have produced a colt regularly each year for the past five years. Norberry was a great performer and was raced in 1902, 1903, 1904 and 1905 and was then retired to the stud. He has shown miles in better than 2:12 1/4 and should have retired with this record. Norberry comes of a family of speed getters, as he was got by Blazeberry, he by Roseberry with a mark of 2:13 1/4 and sire of Strathberry with a mark of 2:04 1/4. Roseberry was got by Strathmore and it was the Strathmore-Wilkes cross that has made so many good crosses and producers of speed. In the afternoon, commencing at 1 o'clock, the sale of Short-horns will take place. Few breeders can show fifty head that have all come from four families and so many bred by the owner. Two cows, Serephina and Belinda Barrington, are females that Mr. Belcher bought when founding the herd in 1897 and from them and their daughters over half of the herd have been raised. In 1898 Simplicity was bought for \$330, a long price at that time and probably the highest price of that year for a heifer. Some of the best breeders in America were bidders on her, but Mr. Belcher had made up his mind to buy her. She has proven a wonderfully good producing cow and a milker. Mr. Belcher says she has given as high as sixty pounds of milk per day. The entire herd is a most useful one, all being regular producers, and he regrets that he must sell now, as he has brought the herd to a point where it would show a nice profit each year and that the efforts of nine years' work had not been

vain. The sale will be held on the farm, near Carrollton, and all who are interested in good Short-horns and trotting-bred horses should not fail to write Mr. Belcher for a catalog of both the horse and the cattle sale. See page 24 for advertisement and when writing kindly mention this paper.

A WELL-KNOWN CHESTER WHITE HERD.

Chester White breeders all over the state and many of the surrounding states are well acquainted with the E. L. Nagel & Son, Deep River, Iowa, Chester White herd of swine. This firm have not changed from one breed to another, as has frequently been the case with many breeders. They have always admired the Chesters and they know how to raise the prolific kind. A record of thirteen years at the business is in itself proof of their success as breeders of good individuals. Shipments of their Chesters have been made to various states and in every instance so well satisfied have the purchasers been that other orders were placed. A Homestead representative recently saw this herd of swine and was not disappointed with this season's crop. Pioneer by Iowa Eclipse 10211 by Eclipse Jr. is the chief herd boar. He is a massive individual, and now weighs in breeding condition 900 pounds or better. Seldom is an animal of this size seen that carries himself so well. He is as active as a yearling. This, however, is easily accounted for, as he has the bone to carry his weight and also is in a thrifty, healthy condition. Pioneer sires pigs of quality. Until recently he was assisted by Webster, tracing to Colonel C. and out of dam known as Pride by Census Jr. Pigs sired by either of the above boars may be had. None will be found undersized. Messrs. Nagel & Son at Des Moines State Fair in 1905 won first on gilt under six months, fourth on senior yearling, also junior yearling; fifth on young herd and fifth on get of sire. This without any special fitting. They will be found on deck again at the coming state fair. Any of our Chester fanciers desiring a serviceable type of hog will find this firm entirely reliable and will also be satisfied with their purchase. See card on page 21 and mention The Homestead when writing.

DUROC BREEDERS, ATTENTION!

Again we wish to remind readers of The Homestead of one of the most important Duroc Jersey sales of the year to be held by Mr. J. D. Nidlinger, of Decatur, Ind., on Wednesday, August 8th. The writer, representing The Homestead, has recently inspected this offering and is pleased to recommend it to our readers. From time to time he has visited this good herd and noted the progress and improvement made. Mr. Nidlinger will go down in Duroc history as an improver of the breed, for from his herd have come such noted boars as Echo King, Hauley, Stoner's Improver, J. B. J. and other boars of equal merit. The blood of Longfellow and Corrector (both dead) has been productive of great results, many of the prize winners at the leading shows throughout the corn belt being the get of these two boars. There are few of the get of the above named boars to be found anywhere, and Mr. Nidlinger has listed a fine representative lot which will do credit to both his herd and the herds to which they go. Two important facts concerning this sale should not be overlooked. First, Mr. Nidlinger has demonstrated his ability as a feeder and showman, and when he has put into this sale his herds which he had intended to show this year he is deserving of the support of every Duroc breeder. Second, he is not holding back a show herd to contest for premiums after he has made the announcement of his sale, but positively will not show this year. In our succeeding issues we will have more to say of this herd individually, but in the meantime would advise every breeder to write for catalog which gives full information regarding the offering. Those who cannot be present at this important sale can send bids to Mr. D. M. Pierce, representing The Homestead, in care of Mr. Nidlinger and rest assured that they will be honorably handled. Plan to be present sale day and secure something from this noted herd. Kindly mention The Homestead when writing.

MANIFOLD'S DUROC JERSEYS.

One of the best crops of Duroc Jersey pigs that will be found anywhere this season can be seen by calling on Mr. George R. Manifold, of Shannon City, Iowa. This veteran breeder usually has something good stored away in his back yard, and we want to say for him that he has the most uniform lot of pigs this season that he has ever raised. He has seventy head of spring pigs of March and April farrow and seventeen head of these are sired by Proud Advance. One litter is out of Nan Orion, the sow that produced the third-prize litter at the state fair last year. He has made a wonderful growth on these Proud Advance pigs without getting them fat. Mr. Manifold purchased some splendid sows at the Nidlinger sale last year and they did well for him. One of these sows called Iowa Star, a winner of first prize at Indiana and Ohio State Fairs, has a fine litter by Corrector, Mr. Nidlinger's great boar. The dam of these pigs is a litter sister to Hanley, the boar that got first prize wherever shown, and was afterwards sold for \$320. Decatur Belle, first prize sow under six months and first in young herd at Columbus, has nine good pigs by Corrector, and this is one of the most uniform litters on the farm. These all go into his October sale, which promises to be one of the best of the fall season. Mr. Manifold will be at the Iowa State Fair, where he will show a

daughter of Echo King, the best he has ever sired. She is one of the largest and smoothest big sows that will be seen at the fair this fall, and it is going to take a good sow to beat her. He will also show a good September boar, a son of J. B. J., that he bought of an eastern breeder, and he will have some of his best pigs with him. This Corrector stuff is something new in the West and it will meet with favor on the part of breeders when they see it. The Manifold sale this fall will have attractions that will attract, and the best breeders can well afford to arrange to be at this sale.

A GOOD HERD OF DUROCS.

A good herd of Duroc Jerseys is owned by Mr. L. H. Bryan, of Neponset, Ill. While not large in numbers, it is far above the average in point of breeding and individuality. Mr. Bryan has not sought notoriety in Duroc circles, few breeders realizing the breeding and quality of his herd. The principal herd boar is Checkmate 28715, he by Tip Top Notcher 20729, dam Lad's Gold Dust 64492 by The Lad For Me and out of Gold Dust Pink 53846. This boar has proved an excellent breeder and Mr. Bryan has eight fall boars, twenty fall sows and fifty spring pigs sired by him. The other boar in service is Pilot Lad 15153 by Pilot Wonder 9017 and out of Lucy Wonder XI. 19093, she out of Mable 22518 by Longfellow 6815. This boar stood second in the under year class at the Illinois State Fair last year, but was without a dissenting voice the breeders' choice for first. He should have been placed first, being in the opinion of the writer a far better hog than the one which received the ribbon. Mr. Bryan only maintains a small herd and feels that he cannot keep two as good boars as Checkmate and Pilot Lad. For that reason he has offered this boar for sale. He comes from the herd of Mr. Ira Jackson, of West Milton, Ohio, and Mr. Bryan secured a full sister, Pilot Lady 35160, the first-prize under year sow at Illinois State Fair, 1905, from Mr. Jackson. She has a splendid litter by Checkmate. Flora D. 98204 by King Echo 23459 by Echo King, dam Flora C. 87026, has a very good litter by Pilot Lad which should attract attention. Some breeder who is looking for a show boar will do well to visit Mr. Bryan. He is located three and one-half miles southwest of Neponset and six miles east of Kewanee, and will meet anyone if notified. Some very good fall boars and sows by Checkmate are priced reasonably and should be looked after by breeders in search of herd headers or who wish to secure sows for breeding or show purposes. Look up the advertisement on page 23 of this issue and write Mr. Bryan at once for particulars regarding his herd, kindly mentioning The Homestead.

HARDIN BROS.' CHESTER WHITES.

Readers of The Homestead who are familiar with the show-yard winnings of Messrs. F. P. & J. J. Hardin, of Lima, Ohio, will be pleased to know that they have this year as good, if not a better lot of pigs than they have ever raised. They have supplied breeders throughout the entire West with stock which has won in many of the strongest shows for their new owners. We wish this week to call attention to the unparalleled record made by this firm in the show rings throughout the entire country. In 1900 they won at the Ohio State Fair three sweepstakes, four first, four second and three third prizes. At the Indiana State Fair, same year, five firsts, one second, one third and one championship. Illinois State Fair, same year, ten firsts, three seconds, one third and one championship. Same year at St. Louis, ten firsts and three thirds. In 1901, Pan American, six firsts, six seconds, three thirds, three fourths, one fifth and one gold medal champion sow any age. New York State Fair, ten firsts out of a possible eleven, three seconds and both championships. Michigan State Fair, eleven firsts out of a possible twelve, three seconds and two thirds. At 1903 Iowa State Fair, one first, five seconds and one third prize. Nebraska State Fair, eight firsts, six seconds, four thirds and one fourth. Kansas State Fair, eleven firsts and six seconds. At 1903 Ohio State Fair, eleven firsts (all they competed for), four seconds and one third. Indiana State Fair, same year, eight firsts, two seconds, two thirds and one championship. Kentucky State Fair, seven firsts, six seconds and seven thirds. Illinois State Fair, six firsts and six seconds. International at Chicago, 1903, ten firsts, six seconds, two thirds and two championships. At the World's Fair, St. Louis, 1904, senior yearling boar, first; senior under yearling boar, first and second; junior under yearling, first; reserve grand champion boar and champion under yearling boar; aged sows, nineteenth and twentieth; senior yearling sows, second and fourth; junior yearling sows, second; senior under yearling sow, first and fifth; junior under yearling sow, seventh; champion sow under one year and grand champion sow; get of sire, four animals any age, first and fifth; produce of one sow, first prize; boar and three sows over one year, first; boar and three sows under one year, first; boar and three sows all over one year, bred by exhibitor, first prize; best showing of Chester Whites by one exhibitor, first prize; best showing of Chester Whites by one breeder, first prize; fat barrow one year old and over, first prize; grand champion barrow, first. Although Messrs. Hardin have not exhibited their herds since 1904, they have sold stock that won at the Iowa, Illinois, Indiana, Ohio and New York State Fairs. They are not going to show this year and their best young stock is offered for sale without reserve. At the head of their herd they are using College Teddy 13017 by Teddy R. 11305 and out of Little Bess 2d 9788. This boar is familiar to many western breeders, as he won first and championship bred by exhibitor at the Iowa State Fair. There are eight spring litters to select from by this boar, containing many pigs of show yard merit. Another boar used by Messrs. Hardin is called Louis R. 12597. He was sired by Mark Hanna 11375 and his dam was Pansy I. 19888 by Chester 10709. This boar was first prize pig under six months at Iowa State Fair in 1901 and is the sire of the highest priced pig and highest priced Chester White litter ever sold. There are nine litters in the herd by this boar. Pocahontas 10631 by Tenderfoot 6999, dam White Rose 11592 by See Me Win 6533. The get of this boar won the highest honors at the World's Fair in St. Louis, Indiana, Ohio, Kentucky and Ohio State Fairs in 1903, also first at Pan American, first and championship

at New York and Michigan State Fairs in 1901, and was a litter mate to grand champion sow at World's Fair. Pocahontas is the sire of three litters. Lack of space forbids further details regarding this good herd. Breeders looking for herd boars or show stock will find what they want in this herd and should write at once for prices and descriptions of stock offered for sale. The writer representing The Homestead, who recently inspected this herd, is pleased to recommend it to our readers. Messrs. Hardin will be pleased to have breeders visit their herd and make selections as per the advertisement on page 21 of this issue. Kindly mention The Homestead when writing.

A VISIT TO H. C. DUNCAN'S MAPLE HILL FARM.

It was the pleasure of a representative of this paper last week to visit Maple Hill Farm, owned by Mr. H. C. Duncan, of Osborn, Mo., where Short-horns are given full sway. The broad acres, the fine pastures, the comfortable home and the kind hospitality that is extended to all who visit there are characteristics of those who have good stock and breed good stock for the pleasure as much as the profit there may be derived from the business. Maple Hill Farm comprises some 1,100 acres of as fine Missouri land as the sun shines on. The pastures are stocked with Mr. Duncan's favorite breed—the Short-horn—and for thirty years or more he has bred and developed a type of Short-horn that cannot fail to impress the visitor as being a good type to tie to. In the Maple Hill pastures are some 200 head and at a glance the visitor sees that a past master at the breeding business has been working there. Uniformity prevails to an extent that is pleasing indeed. The easy-keeping sorts are to be seen on every hand and while Mr. Duncan has never been known as a color crank, yet his herd is practically all red with now and then—and only now and then—a rich roan to break the monotony. From these 200 head Mr. Duncan has selected fifty head for a mid-summer sale, to be held at Maple Hill Farm, near Osborn, Mo., on Wednesday, August 15th. Those who are looking for Cruickshank cattle and those who want the Cruickshank-topped sort that carry from seven-eighths to fifteen-sixteenths Cruickshank blood will find them in Mr. Duncan's sale. The offering will be about equally divided as to the pure Cruickshank and the Cruickshank-topped sorts. Among them will be sons, daughters and close descendants of two of America's greatest Short-horn cows—8th Linwood Golden Drop and Rosedale Violet 3d. The former, now sixteen years old and still producing, will have a yearling son in the sale that is of the kind so much sought after and so seldom found. He is not the only outstanding bull proposition Mr. Duncan will sell, but of these more will be said later. In females an extraordinary lot will be sold. They have been selected with the one idea of selling only such animals as will go out to other good herds and stand as a credit to the herd from which they came. Mr. Duncan has issued a neatly-illustrated catalog, all illustrations being made from photographs, and it is his desire to place one in the hands of every person interested in good Short-horns. In next week's issue the advertising will start and more will be said of the offering. It might be well to write him today to put your name on his mailing list. Should you do so, kindly mention this paper.

ERSCHEN'S DUROCS.

One of the good herds of Duroc Jerseys in Illinois is owned by Mr. Frank Erschen, of Odell, Ill. He has been breeding Duroc Jerseys for a number of years and has constantly improved his herd by careful selection, close culling and numerous additions from the best herds of the breed. At the head of his herd he is using Comet 25965, he by the noted prize-winning and breeding boar, Gold Finch 7549, now heading the well-known herd of Mr. Harry Riggins, of Petersburg, Ill. The dam of Comet was Daisy Paul 57390, she by Oom Paul 7545. Boars of this breeding are hard to find, which individually of the correct type as is Comet, descend from such noted boars. About one-half of the spring pigs are sired by this boar and they are a very good lot, many of the boars fit to head herds. Another boar used in the herd is Long Duke 42898. He was bred by Mr. J. D. Nidlinger, of Decatur, Ind., and is a son of the noted boar, Longfellow (now dead). His dam, Bright Star II., by Echo King, is also the dam of Hanley, the first-prize boar at Indiana and Ohio State Fairs last year and now heads the well-known herd of Messrs. McNeil Bros., of Bowen, Ill. This boar resembles Hanley in many respects, having a good head and ear, well-arched back, plenty of bone and stands on the best of feet and legs, is unusually growthy, yet combines smoothness and quality. A boar of unusual merit is found in Frank's Choice 35801. He is a son of Stoner's Improver 22641, he by Echo King 18415 and his dam Daisy Muller 37548 by Patbinder is one of the best sows ever owned by Messrs. T. W. Stoner & Son, of Henry, Ill. Frank's Choice is a litter brother to Fashion Boy, the boar now in use by Messrs. E. H. Deal & Son and Mr. Fred Schweizer, of Elwood, Ill. Both these boars are of the quick-maturing, easy-feeding sorts and have produced much good stuff to be found in the herds of Messrs. Erschen, Deal & Son and Fred Schweizer. The sows in this herd are of the prolific families of the breed. A very good litter is out of Rose O'Grady S., she by All O. K. 20803 by He's A Hero 11743. This litter was sired by the grand champion boar, Tip Top Notcher, and consists of four sows and two boars, all fit to go into any herd. A litter by Roland, boar now used by Mr. Ed. A. Baxter, is out of Lady B. 95780, she by Buddy K. IV, champion boar at Illinois State Fair, and her dam was by Tip Top Notcher 71202. There are three boars and three gilts in this litter, all good ones. A good litter of ten by Comet is out of Bashful Lou 89020, she by None Such 13219 (the sire of Hanley), dam Maud Muller 17386 by Sensation. A good litter by Frank's Choice is out of Lady Fashion 60656 by He's A Hero 11743, dam Gay Lady 22792 (A.), an International winner shown by Messrs. T. W. Stoner & Son. A choice litter, in fact thought to be the best, by the writer, representing The Homestead, who recently inspected the herd, is out of Mary Roberts 89022, she by He's A Hero 11743 by Broad Back 7481, dam Hattie Roberts IV. 26753 by Iowa Tom 8085. This litter is sired by an excellent boar of Mr. Erschen's own raising, Just One, he by Odell Boy by

BEFORE YOU BUY A MANURE SPREADER

SEE that its frame and sills are made of oak; that it has a ball and socket joint on front axle to prevent racking and twisting and steel braces and steel truss rods to guard against warping and sagging. See that the apron does not run backward and forward on hilly ground but insist on a positive and continuous apron drive.

"A boy can run it"

See that it is practically automatic and so simple that any boy who can drive a team can run it as well as any man and control its every operation without leaving the seat. The

Appleton Manure Spreader

has all these improved features and many others equally important. Write to-day for free catalogue and special prices and terms.

SCOTCH SHORT-HORNS. For sale, four good Scotch bulls, Jordon & Dunn, Central City, Ia. Maine Valley Stock Farm.

King Wonder, Odell Lady by None Such has a good litter by Comet. We have briefly reviewed some of the good litters to be found in this herd. Mr. Erschen will be pleased to furnish prices of anything which he may have for sale and invites inspection of his herd. His prices are reasonable and his stock represents some of the best producing and prize winning herds of the breed. Write him as per the advertisement on page 23 of this issue and plan to visit his herd and make your own selections. In writing please mention The Homestead.

BROOKSIDE POLLED DURHAMS.

We wish to call the attention of our readers this week to the well-known herd of Polled Durhams owned by Mr. F. A. Murray, of Mazon, Ill. Many of our readers are already familiar with this good herd, having purchased stock from Mr. Murray. He has tried to produce the type which has won fame in the leading show rings of the country, and that he has been successful is clearly demonstrated upon inspection of his herd. The most essential point in any herd is uniformity of type, and by the use of good bulls and the careful selection of females he has been successful. His present herd bull is Orange Knight, an Orange Blossom by the former herd bull, Brookside Knight. The dam of this bull was Royal Marshal, he by Royal Victor. Orange Knight is a nicely-made bull, having plenty of length, good spring of rib, nicely-turned quarters, with good level lines. Brookside Knight, his sire, was a remarkable breeder and many of the best things in the herd were by him. A full brother to Orange Knight, a year younger, Orange Knight being just two years old, is also of the same good type. Some breeder wanting a good herd bull should not overlook this calf. A September calf by Brookside Knight, of the Rosemary family, is also offered for sale. A

\$145.00 STEEL BALER
14x18 FULL CIRCLE

F. O. B. Quincy. The greatest value ever offered in a baling machine. Large feed opening, power head which gets baling machine out of every pound of horses' pull, quick rebounding plunger, allowing two charges to be ejected from the team, and brake device which relieves team of any jerk from the rebound, makes it easier for men and horses and capacity greatest. Our book (sent free on request) quotes records of over 18 and 20 tons day after day with the same men and horses. Our press weighs 2,600 pounds. Some others weigh only 1,500 pounds. Is it any wonder such presses are continually breaking down and require constant expense for repairs? Send to your order with draft and we will ship at once and guarantee as represented or money refunded.

15 TONS A DAY

GEORGE ETEL CO. QUINCY, ILL.

good bull calf of the Gwynne strain should attract the attention of discriminating buyers. His pedigree reveals ten straight crosses of polled ancestors, an exceptional pedigree to be found in few herds. Another young bull of exceptional merit is the twelve-months calf by Brookside Knight called Glen Prince. His grandsire was out of a Gay Monarch cow and his ancestry was rich in the blood of the famous Spartan Hero. Prince Snow-down is another good young bull by Lord Basterday. His dam was a half sister to Brookside Knight, being sired by Idle Knight. Of the ten young bulls Mr. Murray is offering for sale all but two are from six to twelve months old and the other two are yearlings. They constitute an offering worthy the attention of discriminating buyers. The heifers in the herd are an equally good lot, including the Orange Blossom, Victoria and other fashionable families. Mr. Murray will be pleased to have anyone in need of a good herd bull inspect his herd and to those who cannot do this, he will furnish prices and descriptions of any stock which he may have for sale. Mention The Homestead when writing.

A GOOD HERD TO SELECT FROM.

The good herd of Durocs owned by Mr. William Sutter, of Liberty, Neb., are doing nicely. Mr. Sutter tells us that our medium sold all of his stock last year and expects us to do so again. The Sutter herd is one of the best in Nebraska. The owner is a reliable breeder, as well as being posted on pedigrees and individuality. He showed the writer several letters from his customers and we must say that this gentleman has pleased all. The class of Durocs placed on the market by this man are strong individually and show signs of usefulness. The crop of spring pigs will number over 100 head, of which fifty are sired by the great Nebraska Wonder by Crimmon Wonder. This animal is one of the best breeders to be found among the breed. His get show his same size, finish, bone and vitality. Nebraska Wonder was sold last winter to Mr. Chester Thomas, of Waterville, Kan. Mr. Sutter had the use of this great hog until December 1st. Several very promising herd headers are noticeable. One litter of special note is out of Queen Marion 2d. This litter affords five strong boars that will please the best breeders in the business. One boar in the litter is an outstanding pig. He should be shown by all means. He has all that is needed to make him noticeable, having size, length, deep body, strong, wide back and plenty of bone, with a good set of feet. The entire lot of boars are good. The other boar doing service in the herd is Billy K. 2d by Billy K. and out of Van's Lady by the great show hog, Van's Perfection. This boar is very good, being of good size, neat head and ear, good back and legs and all in all a good one. His get are very good. Mr. Sutter has several very fine fall sows sired by Nebraska Wonder that are very strong. He intended to show these at Nebraska, but has changed his mind, owing to the extra work. The herd of aged sows are worth the price of admission. They are uniform and all good mothers. The crop of spring pigs will bear out these statements. The herd represents the blood of Crimmon Wonder, Liberty Jim, Billy K. and several more of note. The sow, Bertha H., by Czar Roberts and out of a Liberty Jim dam, is the same animal that won second in the same class with the great Nebraska Belle. This sow is a good, strong animal in her present age and could stand to be shown and not be disgraced, either. Queen Marion 2d by Tom Thickset by Glendale is the dam of some of the best spring pigs. Last, but not least, is the fall boar sired by Nebraska Wonder. This animal is of good size and will please many men in search of a hog. He comes from a good family. This boar is now offered. The entire lot of spring pigs are very thrifty and we would suggest that you get interested early, as the demand will be far more than Mr. Sutter can fill. Look up his advertisement on page 20 and write for prices. Remember, you get a square deal. Mention this paper.

WALKER'S POLAND CHINAS.

The writer representing The Homestead recently inspected the Poland China herd owned by Mr. T. W. Walker, of Mazon, Ill., and found the herd in excellent condition. Mr. Walker is a good judge, feeder and fitter of swine. He has for a number of years been breeding thoroughbred swine and has made it a careful study. The experimental stage has long since passed and the pigs which he has and is offering for sale deserve a place in the best herds of the country. His herd boars are of the large, heavy-boned type, quick maturing and especially good breeders. The get of these boars combine uniformity, size, growth, quality, style and finish. His principal herd boar is Big Perfection 101953, he by I Am Perfection 2d 69165 by I Am Perfection 49035. He is a full brother in blood to Chief Perfection 2d. He has an excellent head and ear, full heart girth, well-sprung rib, with nicely-arched back, wide loin, deep, full hams and stands on extra good feet and legs. At the age of five years he hasn't a wrinkle in him, but is as smooth as a pig. Three good litters are sired by this boar. The other herd boar is Cyclone Perfection 95269. He, too, is of the large, heavy-boned type, but has plenty of style and finish. He needs no further recommendation than his get. They are very fancy, yet have the growth and size which the breeder of today demands. He was sired by Beauty's Perfection 67397 by I Am Perfection 49035, dam W's M. Q.'s 2d by Elder Joe 74605. Three litters are sired by this boar. Another boar just a year old is Pluto. He is a half brother to Cyclone Perfection, being sired by Beauty's Perfection 67397. He is an excellent breeder, has a very fine head and ear, good back, extra length, plenty of style and finish and stands on extra good feet and legs. It should be stated that there is not a poor-footed pig of any age on the farm. Some breeder looking for an extra good herd boar can find what he wants in Pluto. Considering his breeding and individuality, Mr. Walker is pricing him at a very reasonable figure. A very good litter by Cyclone Perfection is out of Walker's Daisy 23952, she by Jumbo King 84557, dam Eden Daisy 2d by Chief Armour 55335. A fine litter of March pigs by Cyclone Perfection is out of Miss Aristocrat, she by Cantrill's Perfection. A herd boar could be found in this litter. One of the best lit-

ters seen by the writer this year is sired by Big Perfection and out of a sow called Adelaide Perfection 23845, she by Beauty's Perfection. This cross has proved an excellent one and the litter is especially good. Mr. Walker has some very good fall gilts and yearling sows which would do for show purposes, and breeders who visit him will have an opportunity to secure first-class stock from his herd. He ships out nothing but good stock, culls closely and in every way treats his customers as he would like to be treated. Write him for prices and other information regarding his herd, kindly mentioning The Homestead.

LAURIE'S DUROCS.

Nearly every breeder familiar with the good herds of Duroc Jerseys is acquainted with that owned by Mr. T. E. Laurie, of Jacksonville, Ill. A review of the sale reports of the past season will show that Mr. Laurie has been one of the best buyers of the year. He has always bought what he considered the best and has not been slow to appreciate the good ones. At the present time he is offering a number of good fall boars, strong, vigorous fellows ready for service, at \$25 each in order to make room for his spring pigs, the best he has ever raised. Several of these fall boars are sired by Buddy's Perfection 45755, he by Dutchman 13295 (A.) by Sensation 7393 (A.), dam Buddy Beauty 34318 by Buddy T. 10799. Most of the lot, however, are sired by He's Our Pride 29031 by I Am Perfection 28801 by the \$2,500 boar, Kan't Be Beat 28067, dam Our Pride 71242 by Top Notcher 23335. The breeding of this boar should suit the most fastidious and when individuality is considered, as well as breeding, as it should always be in the selection of a herd boar, some of the fall boars the get of He's Our Pride will certainly please. This boar is also the sire of many of the spring pigs. A number of the spring pigs are sired by Buddy K. 20855 by Buddy T. 10799, dam Hyde's Beauty 25412. This boar is a litter brother to Buddy K. IV., the first prize and champion boar at the Illinois State Fair, 1905. Two very good spring litters are found in a sow by Buddy T., the litter by Mayor Jr., first-prize yearling boar at Illinois State Fair, 1905, and a sow by Mayor Jr. with litter by Gold Cloud, the first-prize and champion boar at Illinois State Fair, 1904. Another good litter which should attract the attention of breeders is by Mayor R. and out of a litter sister to the sows which won first as produce of sow, second prize young herd and second prize young herd bred by exhibitor at the Illinois State Fair, 1905. Mr. Laurie secured this sow in the Fagan, Browning, Hess & McCabe sale and she has produced him a fine litter. Mr. Laurie will price spring boars, as well as fall boars, but is reserving his gilts for public sale. He deserves the patronage of every Duroc breeder and his stock is of the kind that pleases. Write him for prices and other information, kindly mentioning The Homestead, as per the advertisement on page 23 of this issue.

MAPLE GROVE CHESTER WHITES.

It is with a feeling of confidence that breeders will appreciate good stock that we call attention to the Maple Grove herd of Chester Whites owned by Mr. Ernest L. Mear, of Neponset, Ill. The writer has inspected many of the leading herds of the breed and is pleased to make the statement that in his opinion Maple Grove herd compares favorably with the best. Mr. Mear has been a careful student of pedigree, is a good judge and has selected only such stock as would in his opinion produce the type of Chester Whites which are demanded by the best breeders and farmers. The principal herd boar in use is Prince O. K. 15609 by Jerry S. 13167 by Mike 11977, dam Yum Yum by Model 10163 (N.). This boar is the sire of practically one-half of the spring crop of pigs. He was second at Illinois and Iowa State Fairs, 1905, and first at interstate fair at Sioux City, Iowa, and at Michigan State Fair last year. Individually he is of the show-yard type, has an excellent head and ear, one of the best pairs of eyes the writer ever saw in a Chester White hog, is full in heart, has nicely-arched back, well-sprung rib, wide loin and an extra good, deep, wide, full ham, and stands on the best of feet and legs. His get have the good characteristics of their sire; several of them will be found in Mr. Mear's show herd this year. Mr. Mear has a number of very good fall boars for sale by Billie A. 14147. This boar was sired by Oskaloosa King 11821, dam Queen Medium 2d 10484. This lot of fall boars contains several of the herd-header sort and any breeder wanting something good should write Mr. Mear at once. A good lot of pigs are found in the herd sired by Fisher's Medium 14705, he by Perfect Medium 13841, dam Pet 6th 11760. Mr. Mear sold this boar to Mr. E. J. Brouhard, of Colo, Iowa, who was so well pleased with him at the Illinois State Fair that he bought him, Mr. Mear reserving the right to breed a few of his sows to him before shipping. A very good boar which should go to head some good herd is Fisher's Medium II. He is of strictly show-yard type, hard to fault anywhere, and if properly fitted this season should be well up in the money. He is by far one of the best boars seen by the writer this year and we are pleased to recommend him to any breeder wanting a herd or show boar for this year. The sows in the herd have been of the prolific, profitable families, of show-yard type. A fine litter of six is by Prince O. K. and out of Lady Perfection. This sow won first under six months at the Bureau County Fair in 1904 and was in first prize yearling herd at same fair in 1905. Bureau County Fair is the strongest hog show outside of the state fair in Illinois. Iowa 2d 34394, the second-prize under year sow at World's Fair in St. Louis, by Oskaloosa King, has a fine litter by Fisher's Medium. Pride of Maple Grove 34324 by Ellsworth 10041, dam Lily 16320, has a good litter by same boar. Wisconsin Queen 2d has a litter of ten good ones by Billie A. Lack of space forbids mention of all litters in the herd, but we wish to emphasize the fact that but few herds afford the buyer such a good lot of pigs to select from, both as to individuality and breeding. Mr. Mear will pay express on all stock shipped before September 1st. He is deserving of the patronage of every reader of The Homestead interested in Chester White swine. Write him your wants as per the announcement on this page, kindly mentioning The Homestead.

Model Herd Chester Whites

WE NOW HAVE TO OFFER YOU

Notable Nebraska Short-horn Sales of Scotch and Scotch Topped Show and Breeding Cattle.

At Geneva, Nebraska, on Tuesday, August 7th.

I will sell fifty head of by far the most superior Short-horns that have ever been included in one of my auctions. They consist of fifteen bulls and thirty-five cows and heifers, twelve of which are Scotch. Two good show herds are cataloged, and included is the grand breeding bull, Bapton Gloster 213104, and eleven of his get of grand show yard character. The tops of the herds of I. W. Baughman, Edinburg, Ill., and C. H. Giller, White Hall, Ill., I was fortunate in securing. I have inspected the animals for this auction and they are absolutely good. They are also exceedingly highly bred, the most famous sires and families being represented and I would be pleased to mail catalog to all admirers of the Short-horn.

At Grand Island, Nebraska, on Saturday, August 11th.

Some fifty head of good, useful Short-horns will be auctioned. The bulls will number some seventeen head and are from eighteen to twenty-eight months old; good, strong ones, with scale and substance. The females include a few Scotch cattle, but they are mostly Scotch topped.

Edward N. Hurley, Wheaton, Ill., is dispersing his herd and includes sixteen of his best cattle on this occasion. His herd bull, Diamond Jim, a son of the noted Imp. Bapton Diamond, is cataloged.

Other consignors are Riley & Caswell, Albion, Neb.; F. C. McCutcheon, Holstein, Iowa; B. B. Dean, Glenwood, Iowa.

For Catalog of both Auctions and other Information, address.

W. C. McGAVOCK,

SPRINGFIELD, ILLINOIS.

COL. T. C. CALLAHAN AND OTHERS, AUCTIONEERS.

DUROC JERSEY HOGS.

Dispersion of the Famous Gold Dust Herd of Durocs.

HAVING decided to close out my Gold Dust herd of prize winning Duroc Jerseys, I now offer to the public, at private treaty, my entire crop of spring boars. They are sired by Tip Top Notcher, grand champion at World's Fair, acknowledged by most competent judges to be the best Duroc boar in America; Ohio Chief II, one of the best sons of Ohio Chief; Champion Paul, a son of the noted Oom Paul; and Fancy Orion, an exceptionally good son of the World's Fair winner, Orion Chief. I am keeping my sows and spring gilts at exceptionally low prices on October 24, although I have received tempting offers for them at private treaty. I am keeping nothing back and my entire herd will be disposed of at private and public sale. Write for prices and descriptions at once if you want a herd boar from Gold Dust herd. Address,

GEO. W. SECKMAN,

RIPLEY, ILLINOIS.

CLOVER-WAVE DUROC JERSEYS.

Sires in service, Red Orion 25793, by Orion 5393; dam Rose Bud 50186 by Jumbo Red 7973, a half brother to Ohio Chief. Belle's King II 4413, by Belle's King, a son of Echo King and Nebraska Belle. Dam of Belle's King II is Lou Dillon 199830 by Orion, dam Cherry Blossom II 50574 by Dandelion 12165. Duroc Standard 4417 by Duroc Paragon 29181, by King Perfection 16235; dam Paulina Queen II 86492, by Duroc Challenger 11163. We have 110 pigs mostly of March and April farrow, sired by these boars and others, and from as good a lot of sows as can be found in any herd. We are better prepared than ever before to furnish choice breeding stock. Visitors welcome at all times.

WHOLE NO. 2558.

THE EFFECT OF IN-BREEDING ANIMALS.

"We have always claimed that the average individual had better let the practice of in-breeding animals alone, though we have never denied the virtue there is in the practice providing it is carried on intelligently. Some time ago Mr. N. H. Gentry, the noted Berkshire breeder, of Sedalia, Mo., presented a paper before the American Breeders' Association, in which he said:

Nether inbreeding nor the reverse will be a success unless matings are made with animals suited to each other, that is, having no weakness in common, if possible, and as much good in common as possible. This, in my opinion, is the key to success in all breeding operations, and success will come in no other way. In my opinion, inbreeding as a rule is very good or very bad. If you intensify the blood of animals that are good, you do good, but if they are bad, you go wrong as fast or faster than you go right in the other case. If it is true that inbreeding intensifies weakness of constitution, lack of vigor, or too great fineness of bone, as we all believe, is it not as reasonable and as certain that you can intensify strength of constitution, heavy bone, or vigor, if you have these traits well developed in the blood of animals you are inbreeding with? The latter is certainly my belief and experience.

The fact that some of the notable animals that Mr. Gentry has produced have been the result of very close inbreeding indicates the possibilities for good associated with the practice. In too many instances, however, inbreeding is resorted to simply as a matter of convenience, being commonly based upon a question of economy. We have known instances where, in order to avoid purchasing a new sire for the herd, a young animal closely related to all the females in the herd was used, when as a matter of fact everything in the herd had decided weaknesses. One instance comes to mind where poor feet was the common characteristic of the sows in the herd. A related male was used and he was not perfect in this regard. As a result the poor-foot characteristic seemed to be absolutely fixed with this one cross. The whole crop of pigs in this case were weak-footed from the start, and one could tell even when the little pigs were less than a month old that their pasterns were weak. It was a case where inbreeding intensified the undesirable characteristics.

As to whether or not inbreeding lessens stamina, men differ in their opinions. Darwin himself was of the opinion that close inbreeding in large animals, and notably in the case of pigs, is followed by evil effects, which may lead in some instances to sterility, loss of vigor or other detrimental effects.

We again repeat that we indorse the practice of inbreeding in the hands of the intelligent breeder, but state emphatically that the novice had better resort to the use of sires that are not closely related to the females in his herd.

RELATION OF AGRICULTURE TO OTHER OCCUPATIONS.

The latest year book of the department of agriculture contains an interesting contribution from the chief of the division of foreign markets, Mr. G. K. Holmes, on the causes affecting farm values. On the relation of farming to other occupations the author says:

The rapid development of manufacturing, transportation, and merchandising, or professional, personal and domestic service, and of minor vocations, with a sustained export demand, is supporting good prices for the farm products of this country. The non-agricultural vocations have made such heavy demands for labor that farm workers are not so numerous as to cause overproduction. Since the making of raw products of food and

clothing chiefly constitutes farm industry, and since the consumption of each of these two classes of products is subject to only a limited change per capita of the total population, high prices of lands necessarily require that there shall not be too large a percentage of total population engaged in agriculture, and the non-agricultural population must be prosperous so as to pay justifiable prices for agricultural products.

The balance between country inhabitants and townspeople now seems fairly well adjusted, so that there are good wages in the non-agricultural pursuits and reasonable remuneration in farming. Good prices for farm products and the absence of an oversupply of hired labor promote the continuance of the nation's homestead plan of family-sized farms, one of the important social successes that this republic has placed before the world.

Free popular education, secondary schools, higher institutions of learning and of re-

today are better provided with the comforts and luxuries of life than ever before, and even though the margin at the end of the year is no larger than it was when products were cheap, no one will deny that these extra comforts do not signify a more substantial prosperity. There will be ups and downs in our prosperity in the future, but unquestionably we have now reached a higher plane and agriculture is today on a more substantial basis than ever before.

SENSIBLE USE OF DISINFECTANTS.

In no branch of knowledge has farmers made greater advancement during recent years than in that which pertains to the

doubt millions of bushels of grain are fed annually in the corn belt that might be saved if sensible precaution were taken against this pest. The stations have found, and thousands of practical farmers have found that a good coal tar disinfectant will destroy lice. We have ascertained that by spraying hog and poultry quarters and by spraying or dipping occasionally it is possible to entirely stamp out these pests.

A swine breeder recently remarked that he used disinfectants every ten days or two weeks, his object being to kill the lice before they were hatched. We know of many instances where an expenditure of a very few dollars for a good disinfectant would have saved hundreds of dollars' worth of feed.

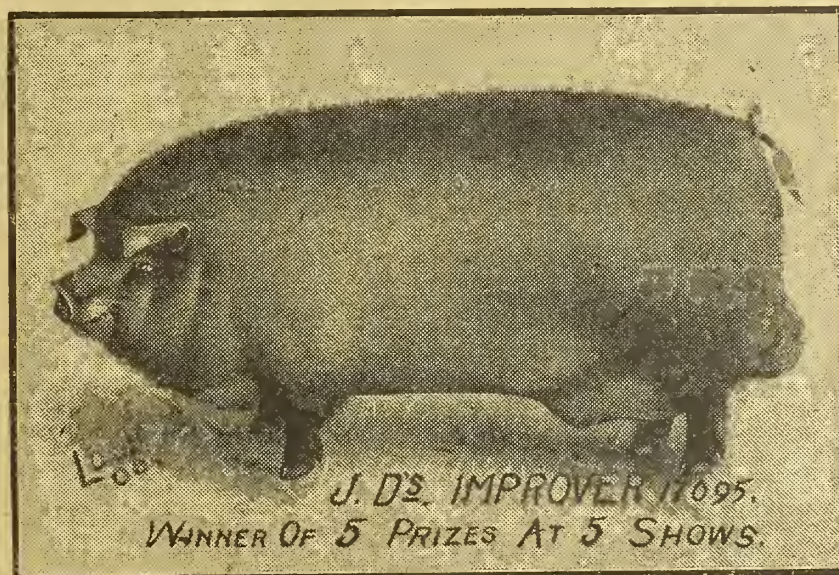

When it comes to wounds, such as wire cuts, kicks, bites, etc., the coal tar product is the thing. There is nothing miraculous about the effect of these products on a wound, because, as stated before, germ life is destroyed and nature is given a chance to effect her own cure. When it is considered that a gallon of the coal tar product as it comes from the manufacturer will make all the way from fifty to 100 gallons when it is ready for use, it must be forced home to us that the cost of keeping animals' quarters free from disease, and in addition the skin clean and devoid of parasites of all kinds, becomes an insignificant matter. We can do our readers no greater service than to repeatedly urge them to get into the habit of keeping a good coal tar product on the farm at all times.

KEEP THE OLD SOW OVER.

There will be a strong temptation to market the old sow this fall on account of the high price of pork. Many are of the opinion that their hog business is more profitable when the sows are turned off after raising a litter or two and the breeding stock chosen from the youngsters. In this way one gets rid of the expense of feeding the old sows during the late fall and winter months. The young ones must be fed fairly well in any event, whether they be intended for breeding purposes or for the meat market, and it certainly is the most economical from the feed standpoint to let the old sows go and fill the breeding pens with young ones.

We do not favor this practice, however, even under present conditions. Of course there will be plenty of sows in the corn belt this fall that are worth \$25 or \$30 each for meat, and where fifteen or twenty old sows are kept over it is true that some capital is tied up in them. Nevertheless we believe in the fixed policy of keeping over the best old sows. Select those that bring through a good litter of uniform pigs. There is no question but what the old sow will raise more pigs, and raise them better, than a young one. Furthermore, by continuing the practice of breeding from mature sows it will materially contribute to keeping up stamina and constitutional vigor.

There is a growing belief among many swine men that the reduction in stamina of certain breeds is not so much due to the practice of inbreeding as it is to the mistake of continually breeding from young stock; that is, from young sows and from young males. Some of our best breeders have found that by using mature stock always, and by inbreeding sensibly they can fix desirable characteristics only in this way. If anyone would take the time to examine any good pure-bred swine herd he would find

J. D's Improver, second-prize boar at Indiana State Fair, 1905, included in the forthcoming Duroc Jersey sale of Mr. J. D. Nidlinger, of Decatur, Ind., to be held Wednesday, August 8th. See field notes.

search devoted to non-agricultural pursuits, along with governmental assistance in promoting marketing at home and abroad, are building up the non-agricultural classes and thus helping to enlarge home markets and raise their purchasing power for farm products.

In still another encouraging way rural schools, agricultural colleges, experiment stations, departments of agriculture, and inventors are enlarging and strengthening the technique of farm management, enabling the farmer to produce more from the acre and more per worker, and building up a class of farmers who not only produce a living, but also substantially increase their capital and its productiveness.

A careful reading of the above extract will reveal the fact that after all the scarcity of farm help when properly interpreted is not wholly an evil. Even in spite of the introduction of machinery that lightens labor on the farm, it is a fact that many who naturally fall into the farm help class have been drifting to the city. This really takes them out of the ranks of the producing class and places them among the consumers. Of course when the scarcity becomes so marked that men cannot save their crops the reaction shall have then gone too far, but in the meantime the wise farmer will plan his affairs so as to reduce to the minimum the amount of labor that must be employed.

Many are deploring the fact that wages on the farm have gone beyond the point of reason, and land owners in many instances claim that the margin of profit in spite of the brisk prices which farm products are bringing is not so large as when land and labor were cheap. We are not of this opinion. Farm homes

character of germ life. In reality, most stockmen are today bacteriologists, and if not graduates in the science, they are making a creditable showing as students.

The signs of the times are read along these lines by the increasing use of disinfectants. Scratches, wounds, skin diseases and various other troubles are not difficult to handle when it is understood that some kind of germ life is usually the seat of the trouble. Let the germs be removed without producing harm to the tissue and nature immediately makes things whole.

No doubt the future will develop new uses for disinfectants, but at present we know enough about their application to materially lessen much of the loss that was formerly expected among live stock on the farm. All animals have their enemies and few plants are exempt. It is the animal and its troubles that we are specially interested in when we undertake to discuss the value or use of farm disinfectants.

We have in mind the coal tar products, as these have been indorsed by our experiment stations. These disinfectants are peculiar, inasmuch as they are deadly to germ life and at the same time are not irritating to the skin if properly applied. A weak solution of carbolic acid might in some instances perform the function of a coal tar product, but the danger is that while you get at one seat of trouble you more than undo the work by setting up other forms of irritation.

The louse is one of the greatest enemies of the farm animal, and without

that the owner believes in the plan of breeding from mature animals. While the man who raises hogs for the meat market has a radically different object in view, yet we believe that the same principles apply and that the profits in the end will be larger when the plan of keeping the old sows as long as they are able to raise large and uniform litters is enforced.

ALFALFA AND HOW CAN WE KILL IT.

BY RICHARD STOLLEY, HALL COUNTY, NEB.

In reading the various farm papers I see many articles about seeding alfalfa, but so far have failed to see anything in the line of giving advice regarding a sure way to kill it, if it has to be done. We have had alfalfa on our place as long as I can remember—nearly thirty years. At first it was a small piece, just for experiment's sake. Finally we sowed about nine acres on good soil and had it well manured before sowing. The result was immense crops, as high as four cuttings; and, really, the worst feature was to harvest the crop so often, since it came just as regularly as clock-work. It actually stood in the way of alfalfa, for I asked one of our neighbors, who had very little hay, why he did not sow alfalfa, and all he could answer was: "Well, I have to harvest it too often and I haven't the time to do it."

We did not sow more of it until we got more improved methods of handling it, and we have had as high as fifty to sixty acres on a 160-acre farm here at home. Some fields run out in about ten years. Our plan is to then plow it up. The first thing you learn is to have a very sharp plow, and it must have a strong cutter bolted to the share, being long enough to reach well through the sod. Then if you have three good horses you are fixed out. A riding plow that we tried was thrown out too easily or pulled too hard. Others had the same experience, and the old reliable fourteen or sixteen-inch walking plow fills the bill best. We plowed some of it quite early in the spring and after harvesting the oats we had a wonderful stand on the field in the fall. All the inconvenience the clover had was to take a little time to start work at the crown and start sprout at the other end; that is, the root end.

I do not know of any other plant that is not a weed that has this peculiarity. Planting corn on alfalfa sod cannot work well because the roots are so tough that no cultivator will be able to cut them, and since burning don't make any difference, it only has a tendency to start roots and sprouts at both ends at the same time. This is, of course, only possible in a wet year. Now, we tried late plowing in the spring; that is, let the clover get up to about six or eight inches. We had a chain on the plow and disked and harrowed it well, and to kill it sure, put in millet to smother it. We intended to raise seed from the millet, but the crop got too heavy and we cut it for hay. After putting it up I saw very little alfalfa signs and went home contented that all was dead.

Some nice rains came on and soon I noticed from our house, since I did not go to that corner of the farm in between, that all of it was green again, and sure enough, there was a comparatively good stand and the sprouts showed quite a bit of vigor. This surprised me. I had no time to plow right away and having a large harvest of bot-

tom hay, I did not go to the field for three weeks, and when I saw it again it was just about ready to cut. I actually did cut and harvest it and it was well worth the time it took us to do the work. The next plowing and disking, of course, thinned it out, and especially as dry weather came just right to assist in killing it.

All this made it clear to my mind that we did not find the right time to plow alfalfa, so the next time I tried it still later; in fact, it was almost in bloom, and, being a wet year, there was little difference in the result. This year I waited the second time for the alfalfa to come up a foot high before plowing it back and drilled in sweet corn, and now I can hardly see any difference on parts of the field. It is sprouting all over nicely and I should not wonder a bit that if I commence to cultivate the corn next week I will have to report that there are young roots at both ends and the sprouts are at the center. Alfalfa is a blessing to this country.

HEALTHFULNESS OF AMERICAN MEATS.

Secretary Wilson, of the department of agriculture, under the direction of President Roosevelt, has recently prepared a statement for publication, the object of which is to repair as much damage as possible that has been done the cattle and packing industry of the country during the past month. The statement is as follows:

American live stock is the healthiest in the world. The great ranges of the West produce herds of cattle in which the percentage of disease is remarkably small, and the federal government is steadily reducing, by approved scientific methods, this small percentage. The inspection of the animals before and at time of slaughter has always been thorough. It is true that the department of agriculture has heretofore lacked the power and the money to provide for an efficient supervision of sanitation and the methods of preparations of canned meat food products.

The legislation which has just become effective provides the department of agriculture with an adequate law and with ample money to carry it into force. Supervision and inspection will be extended from the pasture to the package. The federal stamp upon the can will be a guaranty not only of the healthfulness of the animal, but also that the product was prepared in sanitary surroundings and with the addition of no deleterious chemical or preservative. Any meat food product bearing the government stamp will be fit for food.

With this law in operation it may be accepted as a fact that for healthfulness and purity the prepared or canned product will compare favorably with the fresh meat of the United States, which is and always has been the finest in the world.

The new law is comprehensive, the means for its enforcement are ample and its execution will be thorough. People at home and abroad may use our meats in confidence.

As nearly 90 per cent of the meat produced in this country is consumed by the American people, it is very important that some practical steps be taken, and taken quickly, to establish the confidence of our own people in the meat products turned out by the packing concerns that are under government inspection.

In spite of all that has been done by vegetarians to demonstrate the practicability of getting along without meat, the fact still remains that we are a meat-eating nation, and without doubt men who are engaged in the production of meats can count upon its extensive consumption in the future. With the \$3,000,000 now available for inspection work and with the department fully in sympathy with the terms of the new law, it is but reasonable to expect that all the harm that has been done by the findings of the committee that investigated the packing houses will be wiped out and greater confidence than ever established in the wholesomeness and healthfulness of American meats.

NEW VARIETIES OF GRAIN.

A Kansas farmer who operates a large tract of land is reported to have grown 700 acres of wheat this year from seed newly imported from Russia. The prospects among other farmers of Kingman county indicate that wheat will run from fifteen to twenty bushels per acre, while the new Russian wheat gives every promise, as the reports say, of yielding thirty bushels per acre. As a result of this the entire crop has been sold at \$1.40 per bushel.

This might profitably be made the text of an important sermon. Although it has been demonstrated that Russian winter wheats are adapted to the wheat-growing sections of the corn belt, at the same time many a man has been led astray on account of his desire to experiment. We have seen instances

where grain imported from Russia gave at least twice the yield of the ordinary crop of the locality the first year, and yet in the course of three or four years this promising record was more than wiped out. We believe that nineteen varieties out of twenty brought to this country from Europe or from the British Isles are inferior to our own varieties. Most of them hold up in yield and in quality for a year or two, but in the great majority of cases they very rapidly degenerate afterwards.

Of course there is nothing to prevent any farmer from importing his own seed if he chooses, but we would advise the average man to allow his experiment station to bring in and try out this new seed. Even the station should grow a variety three or four years before making any attempt to distribute the seed among farmers.

It may be that owing to the peculiar character of the climate in the corn belt it will always be necessary to invigorate our small grain crops by importing new seed, at the same time we strongly favor the plan of improving what we already have. In the past we have received many good things from the old world, but along agricultural and horticultural lines we apparently have enough foundation material, and the day has arrived when our stations should undertake to permanently improve what we already have.

Our experience in growing European and Asiatic grains leads us to suspect that some of the growers who sow the product of the 700 acres referred to might be sadly disappointed in the outcome next year. It is to be regretted exceedingly that grains so frequently act in this manner, but so far as we know there is no help for it.

DESTROYING ALFALFA.

Elsewhere in this issue will be found a communication from Mr. Richard Stolley, of Nebraska, in which the problem of killing out alfalfa is discussed. Evidently, Mr. Stolley has had more than his share of difficulty in trying to kill out this useful plant.

Now that the subject is opened up we would like to hear from those who have been successful in killing this crop without an extravagant expenditure of labor.

Hauling Hogs in Hot Weather.

To the Editor of The Homestead:

I see in your paper of recent date an article telling how to haul fat hogs in hot weather. I have had a good many years of experience in that line of business, having kept generally from 150 to 200 head of all sizes.

As did the editor of "Echoes From a Kansas Farm," so did I—always sort out the fat hogs the evening before the day of delivery, having them in a pen adjoining the loading chute. I made several slatted hog racks sixteen feet long, using 1x6 cypress boards for the slats for sides and ends. The bed sills were made of 2x8 cypress. The floor was also made of cypress 1x6's, laid tight. The side slats were securely nailed to stout oak standards made to fit in iron loops bolted in the bed sills. The slatted sides were built with cracks or spaces about four inches wide, the height of the sides and ends being about four feet. Made in this way the sides could be taken off part at a time. The whole rack when set up was bolted together by ordinary wagon rods.

Each rack was divided into two compartments by having one slatted partition made the same as the ends and sliding down between cleats on the sides and then bolted through by wagon rods. This middle partition keeps the hogs from piling up in one end of the hog rack as they are apt to do if there is no partition. On the top of the rack I used a wagon seat, so that the driver could ride in comfort. If the weather was very hot I used a slatted cover on the rack, over which I placed a little hay and thoroughly wet it down. Do these things and you will have good ventilation, shade and dripping water on the hogs.

With these racks I have hauled heavy hogs in the middle of the hottest days and delivered them in good condition after a six-mile drive. When these racks were not in use as hog racks I used them as hay racks, by having a platform laid on the bed sills and secured to them by means of short standards placed in the iron loops on the bed sills. In the form of the hog rack I have

CHICAGO AND RETURN
On August 4th, 5th and 6th, the Chicago Great Western Railway will sell special round trip tickets from Des Moines to Chicago and return at rate of \$3.00. Tickets will be first class in every respect and have limit for return of August 15th. For full information, apply to E. J. Sawyer, 514 Walnut St., Des Moines, Iowa.

HOMESEEKERS EXCURSIONS.
The Iowa Central will sell round trip excursion tickets every Tuesday to points in Minnesota, Wisconsin, the Dakotas, Manitoba, Saskatchewan and the Canadian Northwest, and on the first and third Tuesdays of each month to points in the South, Southeast, West and Southwest. Rate one fare plus \$2. Liberal limits and stop-over privileges. For rates and further particulars call on agents or address A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

YELLOWSTONE PARK.
A splendidly arranged all expense tour to Yellowstone Park and return leaves Chicago August 4th, under auspices of the tourist department of the Chicago, Union Pacific & North-Western Line. All expenses of the journey included in the initial cost. All arrangements for hotels, train schedules, checking of baggage, etc., are arranged in advance. Write for itineraries and particulars to S. A. Hutchison, Manager, 212 Clark St., Chicago.

DEMOCRATIC STATE CONVENTION, WATERLOO, IOWA.

For the above occasion The Chicago Great Western Railway will sell tickets to Waterloo and return at rate of one fare for the round trip, tickets on sale August 6th and 7th and having limit to return of August 9th. Further information from E. J. Sawyer, C. T. A., Des Moines, Iowa.

Farm Furrows

Turned by a Practical Farmer.

He plows best who plows last and oftenest.

A rain in the ground is worth two on the hay in the windrow.

The auto driver and the farmer exchange compliments—each thinks the other a hog.

Everything comes to him who hustles while he waits for sunshine and rain to help his crops.

We are too prone to attribute our crop failure to some defect in nature and that of our neighbor's to his laziness.

Cement immigrated to this country many years ago, but we are just getting acquainted with him. He has come to stay.

A man who has not farmed in one of the eastern states can scarcely understand the damage that timber squirrels and crows can do to growing corn.

In building a cellar wall an air space is just the thing needed and it costs less than material to fill it. Jack Frost don't like an air space in walls, for it keeps him out.

I once paid \$2 for the privilege of testing a curculio proof plum tree. When it came into bearing I found that the curculio was as fond of it as any I had. I charged up \$1.50 to credulity.

Some of our leading orchardists are learning back into ancient history to learn what they can about the new seedless apple. Isn't that queer—looking into ancient history for new things?

There ought to be a brisk demand these days for the old-fashioned bacon our forefathers used to make. "The old-fashioned bacon, the uncanvassed bacon, the well-smoked bacon our dads used to make."

Judging by the prices good cattle and hogs are bringing at the present time the packing house investigations are not killing off the business very fast. Just old canners, that's all, and who cares for them any way?

I am not a great fellow for revenge, but I would like to have some of these talkative institute workers in the hay mow this warm weather so as to see if they can work as well as they can talk. Wouldn't it be fine?

The up-to-date farmer is not a miner of the soil, digging out wealth, afterwards abandoning his farm, but he is a manufacturer. The miner always leaves a location as soon as it is worked out. Not so with a farmer who is onto his job.

Someone has said that "weeds grow while we are making hay." Yes, that is true if they are there. Some men are so well equipped with help and teams that they can keep up a weed killing warfare while haying is not disturbed in the least.

Burn over the old strawberry bed and row it in some way. Plow out so as to leave rows about ten inches wide every three feet, then harrow it down, so new rows will be formed. By pursuing this plan a bed can be made to last a year or so longer.

There were so few potato bugs this year on my potatoes that I did not resort to the usual custom of greening them, but gathered them by hand, shaking them into a pail and destroying them. It is somewhat of a task, but I very much dislike to handle green poison.

I have a farmer friend who is a staunch believer in the dual-purpose cow. He is slightly lop-sided in build, one shoulder being higher than the other. I asked him recently what made him so crooked and he said that when he was a boy his father kept two cows, a little scrawny dairy cow and a big Short-horn. He always carried the milk from the Short-horn in his right hand and the other cow's milk in his left. That's why his right shoulder has been lower ever since. The father finally sold the little cow and bought another

Short-horn, so that the younger boys are all as straight as a string.

The pure food bill that went into effect on the 4th of July gave bologna sausage such a jolt that all the dogs in our neighborhood are moving about on one ear, so good a time are they having.

A farmer in one of the western states advertises in city papers that he will engage himself to "haul automobiles out of the mud at reasonable prices." This is a new vocation, and probably could be made a profitable one.

The observing city girl was heard to say to her uncle while recently on a visit: "What is the use of all the pure food agitation when the farmers scatter all that manure on the land they are preparing for green corn?" Oh, my, the dirty dirt!

I have tried all kinds of methods of cutting clover for seed and I am not particularly impressed with any of them. The harvester with the binder removed makes a very good way if the clover is not too short. A buncher attached to the mower seems to be as good as any other plan.

While watching some barn swallows recently I observed that they caught innumerable flies. They followed after my team in the harvest field and would swoop down and catch the flies that were pestering the horses. There are not enough of them. I never disturb their nests on the sides of the barn and inside on the rafters.

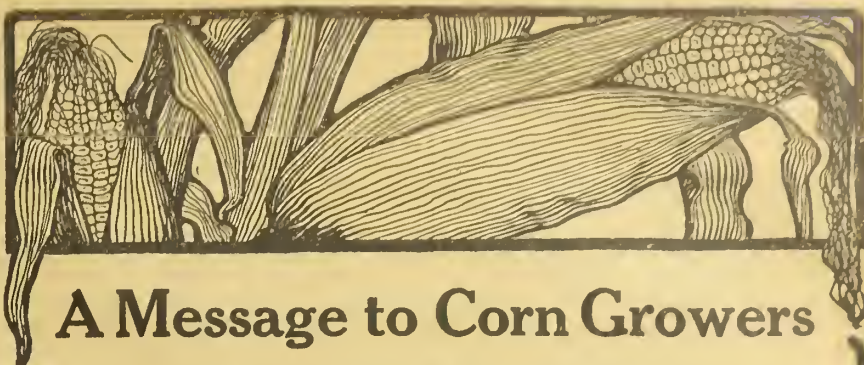

The man who puts off making his clover hay until it is ripe is reaping the harvest of his mistake. He not only has a lot of hay that is lacking in value, but he is taking some of the vitality that should be there for perfecting the coming seed crop. Some farmers make ripe clover hay and then wonder why they can't get a crop of seed.

The man who is denying himself the use of a low-wheeled wagon is shooting wide of the mark. He brings upon himself some very heavy lifting that should be avoided. A man ought not to lift anything heavy that he can raise in some other manner. Back oil appears to be cheap when a man is tender in years, but when old age comes it may be needed.

How many hands does it take to keep up the shocking after the harvester? It depends on the hands and the condition of the grain. One good hand is better than four poor ones, even though he does not keep up. A sturdy son came home on his vacation from the city in harvest time and without any effort at all kept up the shocking of oats that yielded forty-four bushels per acre. He's a husky lad and not one bit afraid of work.

When hay has been put in the barn in a damp condition nine out of ten persons will leave the doors of the mow open so it will cool off. The opposite is the correct thing to do. Hay that is heating is safer and better by having the mow closed up tight, with openings, if any, at the top. The moisture in the hay will rise as vapor and will make its exit at the top, as the roof is kept hot, but in the other case it would condense at the top of the hay by the cooler air admitted through the doors.

"A farmer in western Oklahoma had a novel experience. A few years ago he built a small barn and in its construction used green willow posts at the corner and along the sides. For some time nothing unusual was noticed, but after a year he saw that whereas he had laid the floor near the ground, it was three feet above the soil. He discovered that the willow posts instead of being dead were alive, had taken root and were growing. In their upward movement they had carried the barn along. Last spring the barn was on stilts nine feet high and he put in a floor and surrounded the posts with siding, thereby making a two-story affair. There is now a space of seven inches between the new floor and the ground and the owner expects to have a three-story barn in the course of time." This reminds me of an institute worker who once told a farmer asking a question about live willow fence posts, that "the wires would have to be taken off and lowered occasionally, as the growing posts would continually raise them, and the cattle

A Message to Corn Growers

How Some Have Doubled Their Profit

There are thousands of farmers today who have succeeded in practically doubling the value of their corn crop. Formerly they merely gathered the ears; that is to say they would husk or snap the corn in the field and leave the stalks standing.

When they did that, they secured only about 60% of their crop and left about 40% to go to waste—because the ears represent only about 60% of the feeding value, while the remaining 40% is in the stalks, leaves and husks.

When our Government Experiment Stations and our practical corn experts made this fact generally known, many progressive farmers realized what it meant, and began to look around for the best means of harvesting the corn crop.

They didn't like the idea of working a whole season to raise a crop, and then harvest only about 60% of the total yield.

Then the corn machines—the binder, shocker, and husker and shredder—were perfected, and the problem of saving the corn crop was solved.

Now the corn is cut just when the ears begin to glaze, for it is well known that both the fodder and ears have the most feeding value at that time.

The corn binder or shocker enables the farmer to cut all his corn before

the stalks have had time to lose their succulent, nutritious juices.

The binder or shocker leaves the stalks in convenient form for running them through the husker and shredder.

In this way the corn grower nearly doubles the value of his corn crop, because every acre yields about two tons of stover, which in feeding value is nearly equal to timothy hay; and if you can't market your corn stover, you can market your hay, and feed the stover.

Hay will be hay this season, as there is a shortage in the crop that will be serious unless supplemented by corn stover.

This is the only way you can handle your corn crop if you wish to secure its full value. You are then operating on the same principle as the dairyman, to whom a corn binder or shocker is practically a necessity, because he makes ensilage—but you have the advantage over the dairyman—you can market the ears.

Suppose you have 50 acres in corn. There is \$800.00 in stover alone. Are you going to let that go to ruin in the field or will you get a corn binder and shredder and put that \$800.00 in your pocket?

Why not purchase the corn machines and double the value of the corn crop?

This is a proposition that is worth your careful consideration.

YOU MAY HAVE A CHOICE OF

Osborne, McCormick, Deering, Champion and Milwaukee Corn Binders; Plano, Deering and McCormick Huskers and Shredders

In each of these machines you have all the advantages made possible by the unequalled manufacturing facilities of the International Harvester Company.

The International Harvester Company owns its own timber lands and saw mills, its own iron and coal mines, its own coke plants and rolling mills, from which it produces a large percentage of all raw materials used, selecting in every instance only the best material and working it out in the best way in the above great manufacturing plants. These are advantages which no buyer can afford to overlook.

The International lines are represented by different dealers in your town. Call on them for catalogues and investigate their machines.

International Harvester Company of America, Chicago, Ill.
(INCORPORATED)

would creep under." How wise some men are!

The regular annual shortage of harvest help in Kansas appeared this year on schedule time. There is always a great deal of grain that "must go to waste" on account of scarcity of help, if we are to believe newspaper reports, but somehow or other the Kansas farmer gets a hump on himself and does the work without loss.

Not long since it was my pleasure to pass a man in the road who was driving a team of large horses. He stopped to rest on a hillside and I stopped to look at his team. I observed that the backbands of his harness were made of a cheap grade of webbing, sufficient only to hold up the tugs. This is his summer backband and in winter he puts on the regular backbands. I thought that was a wise plan.

Some time ago I said something about placing moth balls in hens' nests to keep away lice. Now comes a letter that some hens with a depraved appetite have eaten moth balls and died from the effects. I consulted a druggist, who tells me that the moth balls are largely composed of a coal tar preparation known as naphthalene and that it is his opinion that a hen could eat at least a dozen of them without causing any particular injury. I am of the opinion that

a healthy hen will not eat a moth ball. I have been using them for years and therefore spoke from experience.

A hay rake and a mower that have been kept in a fence corner since last year cannot do their best service. They become lonesome, dejected, run down, faded, jaded and no one should expect as much of them as they would of well-kept implements.

Take your vacation during the week of the Iowa State Fair. On the fair grounds will be found an ideal place for camping. There is plenty of shade, good water, grass and all that is necessary to make camping delightful. No better way can be found for visiting the Iowa State Fair than to drive through and camp out while there. The Iowa fair this year is the last week in August.

A cousin spent a year abroad and while he was in Paris he made an attempt to eat some snails in a French restaurant. The plate passed to him contained a half dozen snail shells of a dingy white. A slender two-pronged fork accompanied each dish. With this the snails were jerked out, the horns coming first, followed with a small eruption of gravy. He said he shut his eyes and opened his mouth and popped the snail into it. His teeth met something yielding, but tough, rather suggestive of India rubber. Yum, yum!

THE HOMESTEAD

A Practical Journal for the Farmer, Stockman, Fruit Grower, Poultryman, Gardener and Housekeeper.

BY JAMES M. PIERCE.

JAMES ATKINSON, Editor in Chief.

ESTABLISHED IN 1855.

Entered at Des Moines Postoffice as second class matter

PUBLISHED EVERY THURSDAY.

SUBSCRIPTION RATES—Single subscriptions, \$1 a year; ten copies one year, \$10, and an extra copy to getter up of club. In clubs of one hundred or more, 25 cents a year. Single subscription three years in advance, \$2; five years in advance \$3; ten years in advance, \$5. Remit by draft, registered letter, postoffice or express money order. In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send the old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to

Des Moines, Iowa.

DEATH OF MARTIN FLYNN.

A brief announcement of the death of Mr. Martin Flynn, of Des Moines, Iowa, was made in last week's issue of The Homestead. While it was well known that Mr. Flynn's health was failing, yet the brief report of his career given last week in these columns was not prepared because of the near approach of death. The thought was simply to give a few items in the history of his notable career following on the event involving the incorporation into a company of his numerous business interests.

Since his arrival in America nearly sixty years ago, Mr. Flynn had lived a strenuous life. He had succeeded beyond the average of his fellows as a railroad contractor, as a manufacturer, a banker, a farmer, and notably as a breeder of pure-bred cattle. Like many another man with extensive interests, Mr. Flynn found it hard to share the responsibility with others. He was urged by family and friends to lighten his labors, but his was a life that must wear out and not rust out. A few months ago his nervous system began to show signs of strain, and the mind once so clear and forceful began to cloud. Coincident with this was a rapid weakening of physical strength, and at sixty-six Martin Flynn fell a victim to but a single indiscretion—that of overwork.

Mr. Flynn was a remarkably successful man. His worldly accumulations amount to nearly a million dollars, though this fortune is least among the monuments that are left to mark his useful life. His record as an honest, upright man will long outlive the memory of men now living. He was the true American aristocrat, the ideal citizen whose life counted for much in the church, in the state, and in the nation. His death means the passing of no common man, and in him the profession of agriculture in all its branches loses a great leader, and the ranks of Short-horn breeders has been bereaved of one of its most respected members, Mr. Flynn being a director of the Short-horn breeders' association at the time of his death.

The estate of Mr. Flynn passes down to an unusually capable family of grown

sons and daughters, and to the wife and mother whose superior talents have contributed not a little to the successful carrying out of Mr. Flynn's plans. Iowa is proud of the record made by many of her pioneer sons, but the sorrow that prevails throughout the corn belt over the death of Martin Flynn indicates but one thing; namely, that one of the greatest of her sons has fallen.

THE PROGRESS MADE IN CORN CULTURE.

A writer in the last year book of the national department of agriculture, gives a brief summary of the work that has been done in recent years by the experiment stations in improving the methods of cultivation as applied to corn. A few important points are covered in the following extract from the year book:

Experiments in the different phases of corn culture carried on by nearly all the stations have shown the advantages of frequent and shallow cultivation and have given rise to the more general adoption of this method by farmers, who are finding that their results confirm the station recommendations. By actual test the stations demonstrated that cultivating about three inches deep is likely to give better results than allowing the cultivator to go to a depth of five or six inches; and by a series of studies on the development of the root system of the corn plant they have shown the relation of the depth of cultivation to the location of the roots under the surface soil stirred by the cultivator. The advocacy of shallow cultivation by the stations, based on these results, is doubtless responsible to a very considerable extent for the more or less general substitution of this practice for the deep cultivation and root pruning so common some years ago.

When the stations were established deep cultivation of corn was commonly practiced, and the idea prevailed that culture was merely for the destruction of grass and weeds growing in the crop; but carefully conducted experiments extending over a series of years indicated plainly that frequent shallow cultivation, especially during the latter part of the cultivating season, is likely to give better yields than deep cultivation, because, in addition to a more efficient destruction of the weeds, it forms a dust mulch which conserves the soil moisture, so necessary to the plants at this period of their growth. Since then the manufacturers of implements for corn cultivation have made such improvements in this line of machinery that shallow cultivation is much more easily and effectively accomplished than it was with the old style of cultivators. Some authorities estimate that in the corn belt today 75 per cent of the farmers practice shallow cultivation.

The Illinois station has devised a method of determining approximately the chemical composition of the corn kernel by a simple mechanical examination which may be made with a pocket knife, and which enables every farmer to make an intelligent selection of his seed corn according to scientific principles of plant breeding. Methods of registration showing the pedigree of each ear produced have also been devised by this institution. The growing interest in the production of field crop seeds and the improvement of the crops, as well as the maintenance of their good qualities, may justly be ascribed to the initiative of the experiment stations.

Regarding the depth of cultivation practiced by farmers of the corn belt, it may be said that the work of the stations has been felt along that line. However, farmers were finding out for themselves that root pruning not only delayed ripening, but actually reduced the yield. When growers began to grope around for the fundamental truth of the thing the stations were able to give them results of work which indicated in which direction the truth could be found. As a result of both the experience of farmers themselves and the investigations made by the station, the old four-shovel plow has been set aside in most cases and the six-shovel put in its place. The latter does not penetrate the soil as deeply, though it completely stirs the

When writing please mention this paper.

of seed corn, it must be said that the work of the station is much in advance of farmers' knowledge. It is an excellent sign of the times, however, to find the keen interest that is being taken in farmers' institutes, corn judging schools, short courses, etc., because the result of practical experiments conducted at our stations will eventually be brought to the people and the outcome will be that larger and better crops will result.

Second Brood of the Codling Moth.

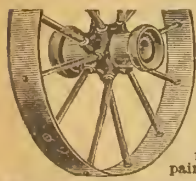

The second brood of the codling moth often does much damage to the apple crop in Iowa. In northern Iowa this brood will probably begin to hatch about August 10th and southern Iowa about two weeks earlier. Since from 76 to 80 per cent of the eggs of this brood are usually laid on the leaves it is important in fighting it that the foliage be thoroughly covered by the spray. The spraying should be done before the eggs hatch. It is best to use bordeaux mixture with the paris green, or other arsenical poison, as directed in Bulletin No. 85 of the Iowa Experiment Station.

The station horticulturist would be pleased to have those who spray their apple orchards for the second brood of the codling moth leave a few trees unsprayed for comparison with the sprayed trees and report to him the results, together with the date of treatment and the kind of spray mixture used.

Ames, Iowa.

S. A. Beach.

It is not so much a matter whether the corn has been "laid by" by the 4th of July, as it is whether it has been properly cultivated previously and how the last plowing has been performed. Some men who are well up in experience are learning some new things about raising corn. Some men have learned it all (?) and they are not as scarce as one is led to believe.

STEEL WHEELS

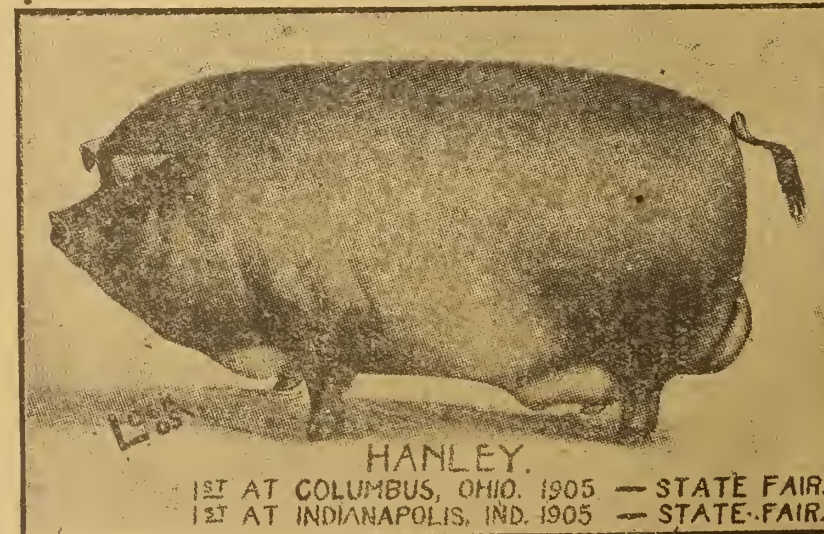

with wide tires double the usefulness of the farm wagon. We furnish them any size to fit any axle. Cheaper than repairing old wheels. Catalogue free.

CURRENT EVENTS AND COMMENTS

H. H. Rogers, oil king and business associate of John D. Rockefeller, has to pay back the sum of one and a half million dollars to the Bay State Gas Company for the benefit of the bond holders. This is the result of the decision handed down recently from the United States circuit court in Boston.

Lady Curzon, who is the daughter of Levi C. Leiter, of Chicago, died on Wednesday of last week of heart failure, the climax of a long and battling illness. The London Daily Mail, commenting editorially on her death, said: "Of the most brilliant among a large group of brilliant American women who have come to live among us, Lady Curzon combined all the intellectual force and vigor of the new world with the charm and grace and tact of the old. Much of the wonderful success of Lord Curzon's rule in India was due to his wife's quiet, but strong, aid."

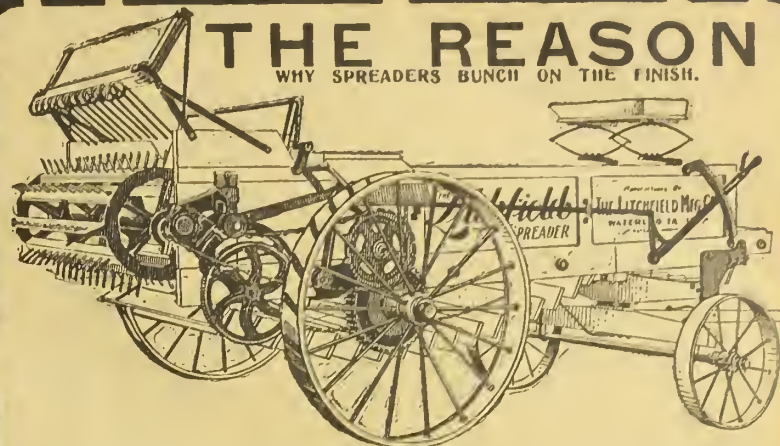

With the advent of the telephone as a factor in modern farming some of the old traditions necessarily vanish. The horn is, for instance, no longer needed to summon the workers at noon-tide. Now, Quedman, in Germany, a farm of 450 acres, besides a full telephone equipment, has an electrical churn, the barn containing electrically operated feed and carrot cutting machines, even the grindstone being turned by a small belt connected with the barn motor. A thrashing and grist mill, a saw mill and various agricultural machines (including a plow) are driven by batteries charged from substations in the fields. Two dynamos moved by a 50-horse power stationary engine furnish the necessary power for the entire farm work.

Chinese labor is to be used in building the Panama canal. The canal commission at its latest meeting on the isthmus considered the advisability of importing coolies from the far East. It seems that American working men will not accept employment as laborers in the canal zone and negroes of the West Indies have failed to render satisfactory service. The commission is therefore compelled to fall back upon Chinese and arrangements are being made to import a couple of ship loads.

A Russian commission has recommended that General Stoessel be dismissed from the army and shot for the surrender of Port Arthur to the Japanese. A formal court-martial will be held in the immediate future.

Washington, July 20.—At 4:30 o'clock, July 8th, the treasury officials began the opening of bids for the \$30,000,000 2 per cent Panama canal bonds, as announced by Secretary Shaw in a circular dated July 2, 1906. Up to noon on that day about 1,500 envelopes marked "Bids for Panama Canal Bonds" had been received.

The bonds will be redeemable in United States gold coin, at the pleasure of the United States, after ten years from the date of their issue and will be payable thirty years from such date. In considering bids, the bidders offering the highest prices will receive the first allotment. Of two or more bidders offering the same price those asking for

THE REASON

WHY SPREADERS BUNCH ON THE FINISH.

TWO WEEKS ago we explained why a tail-gate was necessary to prevent a Manure Spreader from bunching when it first begins to unload. This week we propose to explain why a following tail-gate is not necessary and why it should not be used if you wish to avoid bunching as the unloading is completed.

With an endless conveyor like the Litchfield uses, the load is carried evenly and regularly against the beater wheel and instead of throwing over the final finish in a bunch where straw and tough material is being unloaded, it finishes out regularly without this bunching. If you use a following endgate on a Spreader, this feeds the load up in a solid chunk and the last few inches is very apt to go out in one bunch because there is no more material behind it to hold it down, like there has been during the previous part of the unloading.

With our Spreader, the finishing of the unloading is accomplished without dragging it over a long distance, by simply throwing the lever back to a high speed just as the unloading is being completed. This puts everything out on the ground uniformly. By not having a following tail-gate, the bunching is avoided.

We believe we are repeating something that many of our customers are fully familiar with, but at the same time there are those who do not know this objectionable feature to the "follower" tail-gate and who do not realize the advantage of an endless conveyor, to prevent this bunching and to accomplish many other desirable results which a return conveyor cannot.

Of course, on those machines that use only a part conveyor which must be run back to its original starting point for each new load, it becomes absolutely necessary to use a following tail-gate and this is what causes the additional bunch as the unloading is completed, but with our endless conveyor this objection is avoided.

We sincerely trust that our prospective customers will investigate this question of bunching when the Spreader begins to unload and again bunching when it quits, for there is nothing more aggravating than to keep an extra man with a fork following the Spreader to do away with these bunches and get nice, even distribution. Let the Litchfield Spreader talk for itself, which it will do if you give it the opportunity.

To be continued next week.

the smaller amounts of bonds will receive priority in allotment.

Iowa Climate and Crop Bulletin.

The following climate and crop bulletin is issued by the United States Department of Agriculture, Iowa Section, from the central station at Des Moines, Iowa, for the week ending July 23, 1906:

Though some high temperatures were registered during the last four days, the mean temperature of the past week was a little below the normal for the latter half of July. In the fore part of the week there was considerable cloudiness, with local showers of variable amounts. The average rainfall was much below the normal, the larger measurements being reported from portions of the northern section. As yet, however, the crops

show no signs of suffering from effects of dry weather. Corn has made rapid growth, and on the average the crop is more promising than on the corresponding date in any previous year since 1900. Good progress has been made in haying and harvesting oats and barley, and the quality of both hay and grain is reported to be better than the average of recent years. Pastures are fair, and all the minor crops are doing notably well.

HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

We have had many inquiries about the construction of reliable filtering cisterns. The Country Gentleman gives the following instructions: "The walls of cistern shown in Fig. 1 are of stone, laid in hydraulic cement. The bottom is four inches thick, of concrete, made of nine parts of gravel and sand to one of hydraulic lime, just moistened, laid on in a mass and pounded hard. The lower course of the flat stones of the wall (the footing) projects four inches into the cistern, preventing any crack. The top is covered with two limestone flags, six inches thick, resting on the walls, with a manhole at one corner, the whole so covered and fitted with cement that no insect or surface water can enter, ex-

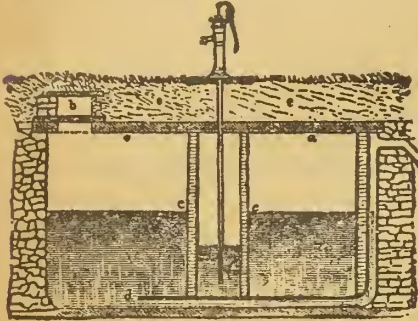

Fig. 1. Cistern for filtering—*a, a*, Flags for Cover; *b*, Manhole; *c, c*, Vertical Shaft for Filtering; *d, d*, Overflow; *e, e*, Earth.

cept through the leader from the roof. A flagstone cemented at the edges covers the manhole; and this is surrounded with a brick wall a foot high, and covered with another flagstone, made airtight with cement. This leaves a foot of confined air, and excludes frost. This is covered with a foot of earth and turfed, and the whole cistern covered with earth. The filter in this cistern is a vertical hollow cylinder of brick, two feet inside diameter, laid in hydraulic cement, and extending from the concrete bottom to the top covering, with an air-hole an inch in diameter, to allow the air to escape as the cylinder fills with water. The bricks used are good weather bricks, such as would be used for the top of a chimney. The circular form resists like an arch any sudden pressure of water against the outside. The water soaking through the four inches of brick is so well filtered that it answers perfectly the intended use. The overflow from the cistern is made so as to give an escape for the filth which comes from the roof, preventing the necessity for frequent cleaning. The leader from the roof enters at one end, and the waste passes from the other end. A channel is made of five-inch tiles across the bottom, beginning about three feet from where the entering water strikes the bottom, and thence by a brick flue against the side, four by six inches, to the over-

flow channel at top, which has a sharp descent through tiles, terminating in a four-inch galvanized pipe, with a self-acting valve at the bottom, which is closed when no water is running, thus excluding vermin. The whole channel inside the cistern is well cemented. Another plan is shown by Fig. 2. The cistern for holding the filtered drinking water is twenty-four feet deep, and the water it contains is as cold as in a well of this depth. It is arched with brick

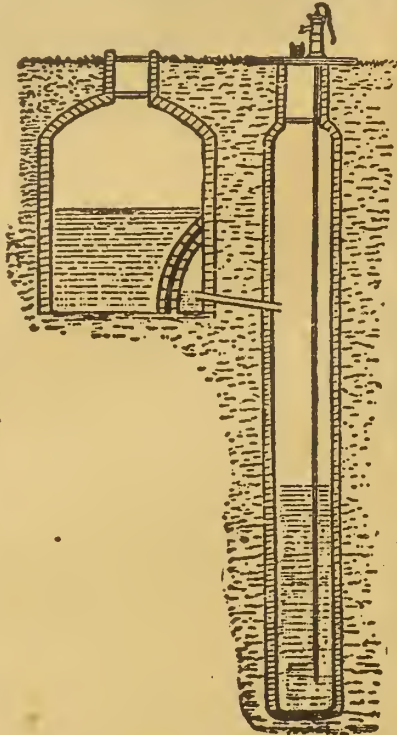

Fig. 2. Deep cistern for filtering and cooling the water.

over the top, the arch starting six feet below the surface. The cistern which receives the water from the roof is seven feet deep, and is placed at the side of the deeper one, with a pipe-tile connecting them. The filter is made of two walls of brick on edge, enclosing two inches of charcoal, the whole in a curve, with about ten square feet of surface. The water passes freely through the brick. The washings of the roof and all warm rains are turned off, and no waste pipe is required. The owner employs a chain pump, which keeps the water stirred, and plastered the cement on the smooth face of the earth, using bricks only for the arch at top."

The following extract from the *Prairie Farmer Horse Book* may be suggestive of some points to one who may own a cribbing horse: "Cribbing may be regarded as either the effect or the cause of indigestion, though it often proceeds from idleness, and from one horse imitating another that is cribbing. Place a cribber in a stall where the manger is lower than his knees, and let the lower part of the hay rack, as well as the window or air hole, be higher than the top of his withers. The arrangement of the muscles of the horse's neck and jaw is such that he can only practice the act of cribbing when these are brought into exertion at a certain leverage. Therefore, remove all protruding objects within the heights mentioned, as he can only crib when stretching the head up or down. When young horses are noticed to continually lick their manger or the wall, which generally precedes the habit of cribbing, the above arrangement should be made forthwith, and some common salt kept continually within their reach. The habit may thus be effectively prevented in the start. The accompanying muzzle is frequently recommended for use on the crib-biter. 'An ounce of prevention, however, is better than a pound of cure.'"

A homemade drenching tube is illustrated and described in the *Indianapolis News*, as follows: "Wherever a horse is, a part of the equipment there should be a drenching tube of some kind by which medicine can be given readily and safely. The bottle, generally used for the purpose, is unsafe, for horses frequently break them and cut their mouths or throats. A homemade drenching tube may be made with a little care, and will be perfectly effective and safe. First procure a large broom

handle or a curtain pole of rather small circumference. Bore a half-inch hole in one end, about eight inches down the pole, which should be fifteen inches long; then bore a hole in the side just at the end of the hole in the tube, and insert a funnel, through which the medicine is to be poured while the end is in the mouth of the horse. To hold the tube steadily while operating and to prevent the horse from throwing it out of his mouth, nail a small leather strap about six inches from the end and fasten a small, smooth hook to the end of this strap; place the end of the tube in the mouth of the horse and hook the end of the strap over the nose-piece of the halter. Be sure the hook is smooth and flat, so that the horse will not be injured by it. Pour medicine slowly in the funnel in side of tube."

Mr. E. E. Ayers, of Iowa, writes: "Will some of your readers give in the hints and devices department some plans for a horse power pump for pumping stock water into a tank? I have seen many articles about such power, but would like an illustration of such a device." [Will some one of our many readers give the information wanted?—Ed.]

From *Popular Mechanics* is reproduced a device for opening a drain pipe, as follows: "When a drain pipe becomes stopped up, unscrew the plug A, and

CLEANING A DRAIN PIPE.

remove the lint or other substance with a bent wire or old button-hook. If the trouble is not remedied by this operation, it shows that the stoppage is at the other side of the plug. In this case,

draw three or four inches of water in the sink, and lay a board, B, over the outlet as shown. The board should be about eight inches square and about one inch thick. Hold a stick, C, on the board, and strike the end of the stick with a hammer. The shock of the hammer blow is transmitted through the drain pipe for a distance of many feet, and will nearly always remove the obstacle."

TERRIBLE ITCHING SCALP.

Eczema Broke Out Also on Hands and Limbs—An Old Soldier Declares Cuticura is a Blessing.

"At all times and to all people I am willing to testify to the merits of Cuticura. It saved me from worse than the torture of hades, about the year 1900, with itching on my scalp and temples, and afterwards it commenced to break out on my hands. Then it broke out on my limbs. I then went to a surgeon, whose treatment did me no good, but rather aggravated the disease. I then told him I would go and see a physician in Erie. The reply was that I could go anywhere, but a case of eczema like mine could not be cured; that I was too old (80). I went to an eminent doctor in the city of Erie and treated with him for six months, with like results. I had read of the Cuticura Remedies, and so I sent for the Cuticura Soap, Ointment, and Resolvent, and continued taking the Resolvent until I had taken six bottles, stopping it to take the Pills. I was now getting better. I took two baths a day, and at night I let the lather of the Soap dry on. I used the Ointment with great effect after washing in warm water, to stop the itching at once. I am now cured. The Cuticura treatment is a blessing, and should be used by every one who has itching of the skin. I can't say any more, and thank God that He has given the world such a curative. Wm. H. Gray, 3303 Mt. Vernon St., Philadelphia, Pa., August 2, 1905."

FISHING AND CAMPING.

The Cream Testing Problem.

Since the change made by the creameries of testing cream from the receiving station to the central station, many inquiries have been received regarding the proper method of cream testing.

In some cases considerable complaint has been made regarding the variation found between patrons' test and test at creamery. Some difficulty has also arisen by the difference found in tests sent to the experiment station and duplicates sent to the creamery. All such controversy is unfortunate and should be done away with if possible. There is no doubt but what a more uniform system of testing should be inaugurated, and the time is undoubtedly ripe when some state supervision should be inaugurated.

We have public meat inspectors. Why not have public dairy inspectors? These inspectors to see that the proper method is used in testing cream at the creameries, also that the cream come up to standard and be of such quality as to insure a good clean article of butter.

The Babcock test is an apparatus for finding the per cent of butter fat in milk or its products. It is based on weight by metric system, therefore the readings are in percentage.

Taking the neck of a test bottle holding 2cc and graduating it into 10 per cent, we have the base from which to figure the theory. The average specific gravity of butter fat at 140 degrees F. is .9, therefore 2cc, or the volume of the bottle neck, will weigh 1.8 grams (2x.9—.18); 1.8 multiplied by 10 would equal 18 grams, or the proper amount for a sample. Nine grams or four and one-half grams may be taken, but in this case the readings should be multiplied by two and four. For convenience in testing milk, a pipette is used to deliver the milk into the test bottle. This pipette holds 17.5cc and delivers about 17.5cc of milk, which, having a specific gravity of 1.033, will weigh about 18 grams. For cream testing the pipette is not considered accurate, because the specific gravity of cream varies greatly, due to the variable per cent of butter fat it contains.

To make a correct butter fat test of cream, the Babcock method is by far the most simple, and is exceedingly accurate when used carefully. The sample should be carefully taken, and as cream is a viscous substance, it should be thoroughly mixed before the sample is removed. A good way to mix is to pour the cream from can to can at least three times, then draw the sample. The sample should be put in a jar or bottle, so as to avoid evaporation or loss in any way. If a sample loses moisture it will give an incorrect result in the test. The sample bottle should always be filled, thus avoiding churning if sample be shipped or carried any distance. In taking the amount from the sample to be tested, great care should be taken in mixing the sample thoroughly. Then with the pipette draw enough cream to insure delivery of 18 grams or more. The samples should be weighed carefully and accurately. First, balance the test bottle intended for making the test, then add to the opposite pan of the scale an 18-gram, or 9 gram, as the case may be, weight; pour in the cream until the two are exactly balanced, taking great care not to spill on the outside of the bottle. Having the sample taken in the test bottle and about 14cc of commercial sulphuric acid and shake with a whirling motion. Put into testing machine and whirl at a speed of at least 600 turns per minute for five minutes. Then add enough water to the test bottle to raise the fat column within an inch of the top of the bottle neck, whirl two minutes more and the bottles are ready for reading. Remove bottles from tester and put in a bath of hot water, temperature at 130 degrees F. See that the water comes well up to the neck of the bottle so that it will submerge, as the fat will soon drop to the temperature of the water. In reading the butter fat, a pair of dividers should be used, space off the fat column dividing the meniscus at the top of the bottle square in the center, then drop lower prong of dividers to zero and the upper prong will give the per cent of butter fat. The meniscus is the small disk at the top of the fat column. This in a 50-per-cent, nine-inch bottle is about 1 per cent, therefore the extreme meas-

YOU GET MORE For Thick Cream

There's a chance for you to get two cents a pound more for your cream—\$4 to \$6 a year more from each cow. Creameries are commencing to grade cream—to pay two cents more a pound for No. 1 cream than for No. 2. As No. 1 cream must be thick—must contain at least 30 per cent more butter fat—you see how necessary it is, when buying a cream separator, to get one that will be certain to skim a thick cream, for you surely intend to get the extra profit No. 1 cream brings. If your creamery is not already grading cream, it probably will within a year or two. Isn't it wise to think of that, and get the right separator, when you buy? This is a sure guide when buying a separator—the simpler the separator bowl, the easier to skim thick cream. The Sharples Dairy Tubular Bowl is the simplest made, nothing inside to clog.

Cream Thick Enough To Cut

The Sharples Dairy Tubular Separator can skim cream as thick as 60 per cent—puts you on the safe side.

Gentlemen: I purchased a Tubular Separator. My cream has tested as high as 60—the richest and best that has ever been brought to the store.
MYRTLE E. AUSTIN. (Address on request.)

Remember! The easy way to get No. 1 cream is to get the simple easy-to-clean Sharples Dairy Tubular Cream Separator—the only simple separator made. Write for catalog L 121 and get our valuable book, "Business Dairying," free.

THE SHARPLES SEPARATOR CO.,

West Chester, Pa.

Toronto, Can.

Chicago, Ill.

1/4 TO 1/2 BUTTER
LOST THIS
WAY

WHICH?

Which way do you skim your milk?
It is hard sometimes to realize just how great the loss of cream is with crocks and pans. Some people may not believe that a

U. S. CREAM SEPARATOR

skims enough closer than the old way to increase their butter yield one-fourth or more. But it does and there's a plain reason for it. When you set milk the cream and skim milk are separated from one another by the force of gravity, but when you skim milk with a U. S. Separator centrifugal force, which is thousands of times stronger than gravity, does the separating. It squeezes out the last drop of cream. Cream is money—you can't afford to waste it. If you keep three or more cows, it will pay you to buy a U. S. Separator.

Look into this. Write today for a copy of our handsome, new separator catalogue. Ask for number 81. It is finely illustrated and tells all about the U. S. Address

\$3.50 TO ST. PAUL AND RETURN, FROM DES MOINES.

Via the Minneapolis & St. Louis R. R. Correspondingly low rates from intermediate points. Tickets on sale July 24th, 25th and 26th; return limit July 30th. Limit will be extended to August 15th on payment of fee of fifty cents. For further information please call on or address W. K. Adams, D. P. A., or D. B. Ransburg, C. P. A., 512 Walnut St., Des Moines, Iowa.

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for
Curb, Splint, Sweeney, Capped Hock,
Strained Tendons, Founder, Wind
Puffs, and all lameness from Spavin,
Ringbone and other bony tumors.
Cures all skin diseases or Parasites,
Thrush, Diphtheria. Removes all
Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism,
Sprains, Sore Throat, etc., it is invaluable.
Every bottle of Caustic Balsam sold is
Warranted to give satisfaction. Price \$1.50
per bottle. Sold by druggists, or sent by ex-
press, charges paid, with full directions for
its use. Send for descriptive circulars,
testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O.

Bone Spavin

No matter how old the blemish,
how lame the horse, or how many doctors
have tried and failed, use

Fleming's

Spavin and Ringbone Paste

Use it under our guarantee—your money
refunded if it doesn't make the horse go
sound. Most cases cured by a single 45-
minute application—occasionally two re-
quired. Cures Bone Spavin, Ringbone and
Sidebone, new and old cases alike. Write
for detailed information and a free copy of

Fleming's Vest-Pocket
Veterinary Adviser

Ninety-six pages, durably bound, indexed
and illustrated. Covers over one hundred
veterinary subjects. Read this book before
you treat any kind of lameness in horses.

VETERINARY MATTERS

PROFESSIONAL veterinary advice through this
department to regular subscribers only. We do
not answer veterinary inquiries for the benefit of
"neighbors." Parties desiring information will be
required to send their names in full with their ad-
dress. No question will be answered by mail unless
accompanied by a fee of \$1.00. In order that correct
information may be given, the symptoms should be
accurately described, stating of how long standing,
together with color and age of animal, and what
treatment, if any, has been resorted to. All veteri-
nary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

WORMS.

I have a horse four years old that has
worms. He is poor. What can I do for him?

Horse is cutting a number of teeth,
and this aggravates the condition. Have
gums lanced over cutting teeth. Mix
one dram of dried sulphate of iron in
feed night and morning for a week;
then skip ten days and repeat. Feed
colt generously upon oats and bran along
with other nutritious food.

COUGH.

I have a bay mare twelve years old that
has had a cough for about three years, and
is getting worse. What can I do for her?

Wet all food as cough doubtless in-
dicates "heaves." See that stable is
kept clean and perfectly ventilated, as
irritating gases in stable often cause
cough. If trouble continues and mare
also passes gas from rectum when she
coughs give half an ounce of Fowler's
solution of arsenic night and morning.
If the latter symptom is absent give half
to one ounce of glyco-heroin two or
three times daily according to severity
of cough.

SWOLLEN UDDER.

I have a young mare colt about three
weeks old that came three weeks before time.
During the first couple of days it was weak
and I had to help it up. In doing so, I dis-
covered that one side of its udder was en-
larged, and by taking the teat in my finger
a white fluid came from it in a stream. When
I compared it with its mother's milk I could
see no difference. I thought perhaps it would
dry up, but looking at it tonight the udder
seems a trifle larger than at first. My neigh-
bors, old horsemen, say they never saw any-
thing like it. Can you tell me what causes
it and what to do for it?

Cases are on record of milk coming
from one or both sides of foal's udder;
sometimes the fluid is pus due to a
bruise. Keep stripping udder twice daily
and then rub in well some camphorated
oil. This will dry up the secretion if it
is milk and pus may stop forming under
same treatment.

SCOURS.

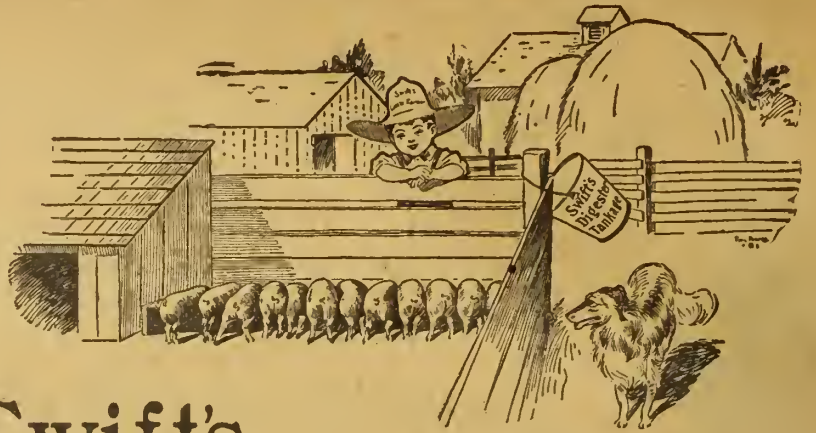

Our spring pigs are affected with a dis-
order that puzzles our local talent. They
have the scours, and their passages are white
or light colored the first few days; some
continue white while others change to light
green, watery like fluid. They eat fairly
well. Their hair becomes rough and grows
very thin. They have range of plenty of
grass. Have fed them corn, shorts and oil
meal.

There should be little to puzzle where
such a condition exists, for it tells plain-
ly of some irritant as the cause of scours
and we first would suspect sour, dirty
slop from old, tainted barrels and sec-
ond, worms. First see that all food used
is sweet and clean, and in it mix lime-
water freely several times a week. Make
digester tankage or dried blood meal a
part of the ration commencing with a
small quantity and gradually increasing
until 10 per cent is fed. Blood meal
tends to stop scours as well as being
wonderfully nutritious. For worms, give
turpentine in the slop, at rate of one
teaspoonful for each eighty pounds live
weight. Give it in the morning three
days in succession, and repeat the fol-
lowing week.

PARALYSIS.

I have three brood sows that are lame.
They farrowed during the first half of May.
Three weeks ago a Duroc Jersey became
lame in hind legs and in a few hours lost
the use of her hind parts. She could raise
up on her fore legs, but when raised up
behind would squeal as if in great pain.
She was this way for two weeks, and then
regained the use of her hind parts enough
to get up without help, but is still very
lame in fore parts and shoulders. A week
ago, two Poland Chinas were taken the same
way. Appetite seems good. I used turpen-
tine on the first. The last week I have fed
a mixture of copperas, salt and ashes. The
hogs have free range of an orchard set
with clover and blue grass, and are fed a light
ration of corn and skimmed milk. They are
in fair flesh for sows sucking pigs, and were
healthy at farrowing time. Please give
advice.

As often explained here this form of
paralysis (parturient eclampsia) is
brought on by strain of nursing pigs and
is seen only in sows from hogs long
pampered on corn and given too little
out-door exercise, so that they have con-
stitutionally become weak in bone, mus-
cle and nervous system. It does not af-
fect strong, robust sows from ancestry
fed mixed rations and kept muscular
by out-door exercise on green food. It

Swift's Digester Tankage

—for Newly
Weaned Pigs

The digestive organs of
newly weaned pigs are so
delicate that coarse, bulky,
irritating meals cannot
be fed with safety. Swift's
Digester Tankage, appetiz-
ing, concentrated and
nutritious is indispensable.

It Keeps Them Growing

Tankage-fed pigs keep right on growing. They are
not troubled by Thumps, Ricketts or Rheumatism.
They look well, grow well and PAY well. We give
facts and figures in our booklet, "Protein for Profit."

is further to be prevented by infusing
new blood into swine by use of boars
from distant parts. All hogs fed corn
on rich, black farms tend to become
"lard hogs," fat, flabby, weak, rickety
and it is such that go down from paral-
ysis. At once wean the pigs and feed
slop of milk, middlings, and tankage or
blood meal; or some other food of ni-
trogenous foods. In food and drink mix
lime water freely. Local treatment is
of little benefit. If, when the irrita-
tion due to the pigs has been removed,
the sow is not too weak she may re-
cover when fed as advised.

ABSCCESS.

I have a helper with a lump on her jaw
something similar to lump jaw, but a veteri-
narian who looked at it with the intention
of cutting it out found it was not lump
jaw. For about eight weeks after he had
opened it, it was a running sore, but for
about two weeks it has not broken, and is
getting larger and harder. It is about the
size of a person's two fists, and has been
on her jaw for about eight months. It com-
mences from the root of the ear and about
two inches under the eye. She is losing in
flesh. Is her milk good?

The abscess may be due to tubercu-
losis and it certainly would be wise
to have her tested with tuberculin, but
it is much more likely that actinomycosis
is present and the seat of the abscess
is such that treatment will not prove
satisfactory. If you care to treat the
case should it prove to be actinomycosis
(lump jaw), give her a dram of iodid

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

MARRIED WOMAN'S ESTATE.

Mr. J. F. Cerny, Manly Junction, Iowa.—A married woman died in Iowa, leaving a husband and children. She owned at the time of her death some personal property consisting of horses, cattle, farm machinery, and other things usually kept on a farm. Who is entitled to said property, there being no will?

Answer.—The husband is entitled to one-third of the property, and the children to two-thirds of it.

DRAINAGE RIGHTS.

A Subscriber, Marathon, Iowa.—(1) A slough runs through A's farm, extending into B's land. A has tile drained his land to within a rod of B's line. Has B a right to make an open ditch on A's land to drain water to his tile? (2) In case A makes an outlet to his tile drain on his own land through a natural waterway, can B recover damages for a ditch being cut through his land by the water?

Answer.—(1) B. has no right to make an open ditch or any other kind of ditch on A's land without A's consent. (2) He cannot.

BANKRUPT INSURANCE COMPANY.

A Subscriber, Everly, Iowa.—I was insured in an insurance company. I was to pay in yearly instalments. Two years after I was insured the company became bankrupt and was placed in a receiver's hands and ceased to pay losses. The receiver sends me threatening notices to make my yearly payments. What can I do?

Answer.—We do not know. You have not stated what kind of a contract you entered into with the insurance company. You may have bound yourself in a hard bargain, so that you are liable to the receiver for all the premiums. On general principles, however, we would advise you to pay no attention to the notices, and let the receiver sue if he wants to.

PERCOLATING WATERS.

A Subscriber, Seneca, Kan.—A has a well about 1,000 feet from his house, from which he forces water to his house and barn. It has been in operation about three years, and A depends upon it for his supply of water. B dug a well on his own ground, just across the road from A's well. He knew before he dug it that it would lessen the supply of water in A's well. There are other places on B's land where he could obtain water by digging wells which are fully as convenient to him as the well he dug, and which would not injure A's well. B's well has lessened the flow of water in A's well. Can A recover damages from B?

Answer.—He cannot. Percolative or subterranean waters belong to the land as long as they flow or percolate in it, and no man can claim a right to such waters in another man's land.

FOUNDATION STONE—FIXTURES.

A Subscriber, Fontanelle, Iowa.—In April, 1906, B. bought a piece of land from A, and is to take possession of it on the 1st of March, 1907. At the time of the sale there were foundation stones on the place to be used as a foundation under the house. A said all things belonged to the farm and were to stay there. Since the sale A has removed the foundation stones. Had he a legal right to do so?

Answer.—We think the removal of the stones was an act of bad faith on the part of A, and that after B. takes possession of the place he can sue A. and recover the value of the stones. Being designed for use in repairing or adding to the foundation of the house the stones were in the nature of fixtures, and should go with the place to the purchaser.

COLLATERAL INHERITANCE TAX.

Mr. H. L. Lathrop, Ottumwa, Iowa.—(1) A Methodist church owns in fee one acre of ground in the corner of A's farm. A's land adjoins the acre on the east ten rods and on the north sixteen rods, and B's land adjoins it on the west ten rods. Whose duty is it to keep up the partition fences between the church land and the lands of A. and B.? (2) A single man, who was never married, died in Iowa, owning forty acres of land. He had eleven brothers and sisters. It is said that the state took 10 per cent of the value of this land. Is there any law giving the state such a right?

Answer.—(1) We think the church should build one-half the partition fence, and the adjoining land owners the other half. (2) If he had neither father nor mother and his brothers and sisters are not residents of the United States, the state has a right to collect ten per cent. of the value in excess of \$1,000 as collateral inheritance tax—for instance, if the land was worth

\$3,000, 10 per cent on \$2,000. If the brothers and sisters reside in the United States, then the state can only recover a tax of 5 per cent on the excess above \$1,000. See Code, Sec. 1467, and Chap. 51, page 43, Acts of 1904.

FRAUD BY LANDLORD.

A Subscriber, St. Paul, Kan.—A. rented a farm from B. for a term of five years. The farm is not as represented by B. Each party has a copy of the lease. Can A. be compelled to stay until the expiration of the lease?

Answer.—Unless the renter was at a distance from the farm, or had no opportunity to examine it when he entered into the lease, it is difficult to understand how the owner could so misrepresent it as to give the renter a legal right to repudiate the contract. However, if the representation of the owner concerning the farm was about a substantial and material matter which the renter could not with ordinary diligence

ascertain for himself, and was made in such a manner as to constitute a fraud upon the renter, the latter can either rescind the contract, or sue the owner for damages.

DRAINAGE OUTLET.

A Subscriber, Atlantic, Iowa.—A slough runs through my land and also that of my neighbor. Last fall my neighbor tile drained his part of the slough for about eighty rods and discharged the drainage water within a few feet of the partition fence, so that it overflowed my pasture land. There is a slight depression in my land at this point six or eight inches deep, which runs into my land for about four rods, where my neighbor's drainage water runs and then spreads over my pasture. There was no running water there before. My neighbor tells me to tile drain my land if I don't want his water. This would mean sixty or eighty rods of tiling before I could get an outlet. Can I recover damages from my neighbor, and, if so, how?

Answer.—If the depression in your land which you mention, does not lead into any natural water course, your

neighbor has no right to discharge his drainage water into it. And you can have him restrained by injunction from so doing, and recover damages from him, by bringing a law suit against him in the district court.

OUR HOME DEPARTMENT

ALL communications intended for this department should be addressed to Post Office Drawer 1127, Kansas City, Missouri.

WITH THE EDITOR.

Did I say last week that this week's "With the Editor" would be with Dr. Van Dyke? I think I did, for it has been my purpose for some time to have the Home learn what he has to say on the subject of "Wood Magic." Dr. Van Dyke has the soul of a poet and the pen of a ready writer; he has also a cultured mind and a wide knowledge of God's out-of-doors. He is at his best in the preface to Wood Magic. In all literature of the kind I know of nothing surpassing the charm of the extract which I here quote, in the very earnest hope that it will stir young and old to go in search of the wonderful vines he describes. I have had such joy, such sheer bliss in the mere copying of it that there is no shadow of doubt in my mind that I do well by the Home in retiring in favor of Dr. Van Dyke this week.

"There are three vines that belong to the ancient forest. Elsewhere they will not grow, though the soil prepared for them be ever so rich, the shade of the arbor built for them ever so closely and cunningly woven. Their delicate, thread-like roots take no hold upon the earth tilled and troubled by the fingers of man. The fine sap that steals through their long slender limbs pauses and fails when they are watered by human hands. Silently the secret of their life retreats and shrinks away and hides itself.

"But in the woods where falling leaves and crumbling tree trunks and wilting ferns have been molded by nature into a deep brown humus, clear and fragrant—in the woods, where the sunlight filters green and golden through interlacing branches, and where pure moisture of distilling rains and melting snows is held in treasury by never-failing banks of moss—under the verdurous flood of the forest, like seaweeds under the ocean waves, these three little creeping vines put forth their hands with joy, and spread over rock and hillock and twisted tree root and moldering log in cloaks and scarves and wreaths of tiny ever-green, glossy leaves.

"One of them is adorned with white pearls, sprinkled lightly over its robe of green. This is Snowberry, and if you eat it you will grow wise in the wisdom of flowers. You will know where to find the yellow violet, and the wake robin, and the pink lady slipper, and the scarlet sage, and the fringed gentian. You will understand how the buds trust themselves to the spring in their unfolding, and how the blossoms trust themselves to the winter in their withering, and how the busy hands of nature are ever weaving the beautiful garment of life out of the strands of death, and that nothing is lost that lends itself to her quiet handling.

"Another of the vines of the forest is called Partridge-berry. Rubies are hidden among its foliage, and if you but eat of this fruit you will grow wise in the wisdom of birds. You will know

where the oven bird secretes her nest, and where the woodcock dances in the air at night; the drumming log of the ruffled grouse will be easy to find, and you will see the dark lodges of the ever-green thickets inhabited by hundreds of warblers. There will be no dead silence for you in the forest any longer, but you will hear sweet and delicate voices on every side—voices that you know and love—you will catch the keynote of the silver flute of the wood thrush, and the silver harp of the veery, and the silver bells of the hermit; and something in your heart will answer to them all. In the frosty stillness of October nights you will see the airy tribes flitting across the moon, following the secret call that guides them southward. In the calm brightness of winter sunshine, filling sheltered copses with warmth and good cheer, you will watch the lingering bluebirds and robins and song sparrows playing at summer, while the chickadees and the juncos and the crossbills make merry in the wind-swept fields. In the lucent mornings of April you will hear your old friends coming home to you—Phoebe and Oriole, and Yellow-throat, and Redwing, and Tanager, and Cat Bird. When they call to you and greet you, you will understand that nature knows a secret for which man has never found a word—the secret that tells itself in song.

"The third of the forest vines is Wood Magic. It bears neither flower nor fruit. Its leaves are hardly to be distinguished from the leaves of the other vines. Perhaps they are a little rounder than Snowberry's; a little more pointed than Partridge berry's; sometimes you might mistake them for the one, sometimes for the other. No marks of warning have been written upon them. If you find them it is your fortune—if you taste them it is your fate.

"For as you browse your way through the forest, nipping here and there a rosy leaf of young wintergreen, a fragrant tip of balsam-fir, a twig of spicy birch; if by any chance you pluck the leaves of Wood Magic and eat them, you will not know what you have done, but the enchantment of treeland will enter your heart and the charm of the wildwood will flow through your veins.

"You will never get away from it. The sighing of the wind through the pine trees and the laughter of the stream in its rapids will sound through all your dreams. On beds of silken softness you will long for the sleep song of whispering leaves above your head, and the smell

of a couch of balsam boughs. At tables spread with dainty fare, you will be hungry for the joys of the hunt, and for the angler's sylvan feast. In proud cities you will weary for the sight of the mountain-trail; in great cathedrals you will think of the long, arching aisles of the woodland; and in the noisy solitude of crowded streets you will hone after the friendly forest.

"This is what will happen to you if you eat of the leaves of that little vine."

HOME AND HOME MAKING.

LITTLE HELPS BY THE WAY.

Tempests, that beat us to the clay,
Drive many a lowering cloud away,
And bring a clearer, holier day.

The fire, that every hope consumes,
Either the inmost soul entombs,
Or evermore the face illumines.

Robes of asbestos do we wear;
Before the memories we bear,
The flames leap backward everywhere.
—Edmund Clarence Stedman.

FEMININE PHILOSOPHY.

If the average husband would praise his wife as much to her face as he does when talking about her to another man the honeymoon would last forever.

Papa is always willing to take little Willie to the circus, but he raises a long and a loud

howl if he is asked to take little Annie to Sunday school.

Men who are prejudiced against mothers-in-law should remember that if it wasn't for those same mothers-in-law they wouldn't have the dearest wives in the world.

If a man brings in two buckets of water and hoses the garden one hour each week he thinks he has lightened his wife's labors of housekeeping 99½ per cent.

The average man thinks he's a martyr when he wears a tie that his wife has bought or made for him, but he never thinks she's a martyr when she wears a hat that he's selected for her.

REAL ECONOMY.

True economy consists in securing the most comfort from the least expenditure of money and time and strength. I have yet to be convinced that an inferior worker in any line saves money for an employer by accepting small compensation. Excellence of work and the speed attained by skill are worth more money than can be saved in wages, yet I know women who draw the line at a half dollar that marks the difference between good and had quality, and so submit to breakage and waste that means dollars. They would resent an imputation of extravagance, but thrifty they certainly are not.

ABOUT CANNING FRUIT.

Putting up fruit is a laborious process, taking it from beginning to end, and no pains should be spared to make it successful. Nothing is so vexing as to have it spoil.

Care in the selection of cans, tops, and rubbers is necessary in order to obtain best results. Try each can with water before

Bird's-eye View of Burwood Stock Farm, owned by Dr. W. H. Earles, of Milwaukee, Wis., Breeder of Short-horn Cattle. A select draft from this herd will be offered for sale at public auction on August 7th. See field notes.

trusting it with fruit to see if it is perfectly tight after the cover is screwed out. It is useless to put fruit away if even one drop of juice exudes from the can when turned upon its side or top.

Opening cans with a fork or thick knife ruins the covers by making the edges uneven. If this has been done, lay them upon a table and pound the edges flat with a hammer.

Old rubbers are rarely in good condition for use. They are so cheap that it is better to discard them entirely and buy new. Sometimes one rubber is not sufficient to render the can air-tight, when the addition of another will make it all right. Keep trying until a perfect fit is secured or else results will not be satisfactory.

An agate or porcelain-lined kettle of medium size should always be used for cooking the fruit, and this kettle should be used for no other purpose. A tin saucepan is an abomination. Do not, for economy's sake, use a kettle in which summer after summer successive crops of fruits have been cooked. In these days agate ware is sufficiently cheap to be within reach of all. Glass utensils of all kinds have been placed upon the market. With these it is possible to be chemically clean. A porcelain-lined colander, or strainer, is sold for use in canning, and scales with a glass pan or tray, glass measuring cups, ladles and skimmers are to be found, all at reasonable prices. These should be put away by themselves in perfect condition each time they are used, and kept for the one purpose—canning. A square of white table oilcloth to set the cans and utensils upon is also an aid to cleanliness in canning.

WHOLESUME SUMMER PIES.

Rhubarb Pie—Pare and cut the pie-plant in inch-length pieces, cover with boiling water and let stand five minutes; drain, and to every two cupfuls add one coffee-cupful of sugar, one heaping teaspoonful of cornstarch, a teaspoonful of butter cut in bits and scattered evenly around, and a dusting of cinnamon; cover closely and cook until tender in a hot oven. When cool, pour into a deep pie-shell, the bottom of which has been brushed over with white of egg, heap a meringue made of the whites of three eggs and two tablespoonfuls of powdered sugar roughly over the top, and brown slightly in a moderate oven. Serve very cold.

Current and Raspberry Pie—Use two parts currants and one part red raspberries and make same as cherry pie.

Lemon Cream Pie—Bring two cupfuls of rich milk to scalding heat in a double boiler; beat the yolk of three eggs and one heaping teaspoonful of sugar until very light, add the grated yellow rind of one lemon and the juice of two, beat well, and gradually pour into the boiling milk, stirring constantly until it thickens; then add a teaspoonful of butter and a pinch of salt; remove from the fire and stir until butter is dissolved. Bake in a deep shell, brush over the bottom with white of egg, pour in the cream, heap a meringue of the whites of three eggs and two tablespoonfuls of sugar over the top and yellow in a cool oven.

Cocoanut Pie—Bring two cupfuls of milk to scalding heat; beat the yolks of two eggs and four tablespoonfuls of sugar until very light, add one heaping tablespoonful of cornstarch, dissolved in four of cream, pour into the hot milk, and stir constantly until it thickens and is smooth. Remove from the fire, add one-half of a freshly-grated cocoanut and cool; beat the whites of the eggs stiff, add one teaspoonful of vanilla and gently fold them into the custard. Bake a deep shell, fill with the custard, and bake in a moderate oven ten or twelve minutes, but do not brown. Spread fresh cocoanut over the top and serve very cold.

Chocolate Cream Pie—Put three tablespoonfuls of water, two of sugar and three of grated chocolate over the fire, and simmer until it is melted and glossy. Make a boiled custard of two cupfuls of milk, two tablespoonfuls of sugar, one level tablespoonful of cornstarch and the yolks of three eggs. When smooth, add the chocolate, stir well together, and add one teaspoonful of vanilla. Pour in a baked shell, heap meringue in even-sized spoonfuls over the top, having one in the center and one for every section of pie when served. Dust powdered sugar over the top, stand in a cool oven, but do not yellow.

AMONG OURSELVES.

Illinois has suggested a new topic for discussion. Representing my own native state, I felt moved to speak in meeting. But I volunteer no solution. To do so intelligently would require a detailed knowledge of every condition and environment of every man and woman in question. Even then this is so decidedly a personal matter that anyone with discretion would be slow in making suggestions. I know a woman who became the mother of four children within seven years who performed her maternal duties more capably than another, the ages of whose only two children show a difference of thirteen years. It surely seems that nature intended that several children should grow up together. An only child is bereft of half the joys of childhood. From observation I do not conclude that small families develop into nobler characters accordingly, than large ones. There should certainly be reasonableness in all things. It seems unjust that a woman in poor health should have imposed upon her the bearing and rearing of a large family, and yet I have known just such women, beautiful, noble characters, whose very life and joy were their children. Child-bearing is not a disease, and with judicious care a woman's health should not be impaired. I have heard people argue radically that a poor man has no right to leave to the world a large family. Ought the things of rarest value that our children inherit from us to be estimated in dollars and cents? Would Lincoln have been of greater service to the world if he had been one of two or three children reared in a mansion? In considering this question from a financial point of view it is not just to estimate that it costs six times as much to raise six children as it does one. I really wonder why large families cause such comment. In olden times parents were proud to present to the world a group of sturdy boys and girls. And the question of race suicide that has caused such comment is still pending. Let a woman in all good faith mother the children given her, be there two or ten. But what think

you of the woman who deliberately approaches her family physician and asks him to relieve (?) her of the inconvenience and responsibility of motherhood? This is race suicide. How many women, think you, will give account of innocent blood at the judgment bar of God? I seriously question the propriety of openly discussing so delicate and personal a matter. If we should in strougest terms denounce the imposition some women suffer what would it avail? There is, in all the world, only one person who can help you decide this matter. Then why not in the privacy and hallowed realm of your own home let this matter rest sacredly with yourself, your husband and your God? I would like to kill two birds with one stone, like the old gentleman who with his wife took their only grandchild to a photographer. After the picture was taken the old gentleman said, "Just as well take another now, and save an extra trip, for Nancy says we must have Armilda's picture twice a year." But I'll come again and tell of a happy little outing our family thoroughly enjoyed.

In some moods I am, like Mrs. Heaston, doubtful of the wisdom of publicly discussing this matter; in others I am rampantly positive that it should be discussed privately and publicly also, until the present morbidity and ignorance are replaced by sanity and intelligence. There are limitations; that is to be understood. But in a general way clean minded persons should be able to discuss a subject of this kind in such a way as to give no offense to any sensible person of taste, however refined. Mrs. Heaston (Nebraska), who has spoken, and Mrs. Imobersteg (Iowa), who is to follow her, speak as gentlewomen. If as gentlefolk we hearken, good and no evil at all should come of our following the example of our president; of our talking like well-bred, thoughtful persons about

Address **F. E. Barrows, Director, Indianapolis, Iowa**

a matter which seriously affects very many of us:

I am not a believer in large families. What right have we to bring more children into the world than we can properly care for? If a farmer raised or tried to raise more cattle, horses or hogs than his farm would support, we would call him foolish, and I

WINTER Wheat, 60 bushels per acre. Catalog and samples free. John A. Sulzer Seed Co., La Crosse, Wis.

think the same reasoning applies to the human family. There are very many people who are thoughtless or ignorant in this regard, and thoughtlessly burden themselves with a family they can scarcely provide for, and too often the discouraged and over-worked wife and mother is laid in her grave before her time, leaving a lot of little ones to the tender mercies of the world. I am not speaking from a one-sided standpoint, but am speaking from my own experience as a mother, and I know too well that the heaviest part of the burden of caring for the children falls upon the mother. If her strength is frail and the purse is slim the burden rests all the heavier. It takes a great deal of money and clever managing to bring up a large family. We owe ourselves some consideration, and we really have no right to burden ourselves so heavily that we cannot do our duty by the children we already have. If Mrs. Roosevelt had to do all of her own work, and care for a large family, and President Roosevelt had to work hard for small pay I think he would change his opinion regarding the race suicide question. I feel sure there is more than one Among Ourselves who will agree with me in saying: "Fewer children and better raised."

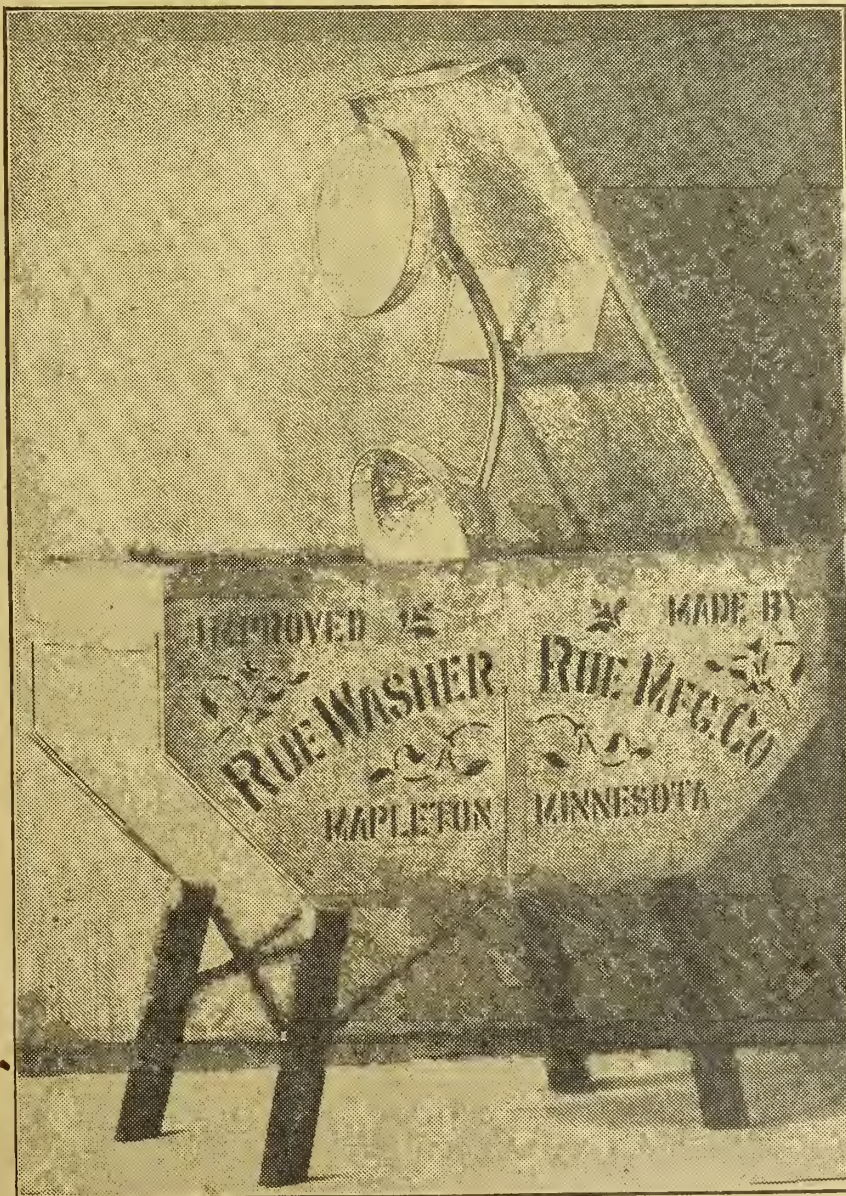

That the matter to which "A Reader" wishes to call our attention has rather more than an indirect bearing upon the one which we have just been considering I think we will all agree:

Dear sisters, who of us cannot recall among our acquaintances mothers of large families, say six or eight children, none old enough to help much, the mother doing all the work, and often having hired help to cook and wash for? Does it seem just to say of such a one, "Oh, she is so disorderly. I never go there," as I have heard a great many say, who had not one-fifth the work, or had help, or had no children? Then after discussing her a while, they would say, "Oh, yes, she was very neat before she was married, but now—" Would we do as well in her place? Would we do better? It seems to me we are very unjust to such a one, and that we ought to sympathize and help her, who must try and make one pair of hands do the work of two or three pairs. Very likely she is aching to have everything clean and neat, as well as anyone else (which is almost an impossibility with a lot of children). So let us refrain from passing judgment on the mother of large families.

Should any woman have so many children that she cannot keep them, herself and her house decently clean? Is it fair to the woman? A mother is first of all a woman with duties to herself. Is it fair to the children? Have children so born, so reared, the heredity, environment and equipment which is the right of every human being in America in this twentieth century? These are fair questions.

E. M. comes to us for the first time, so timid and so shrinking. She is all apologies to me. Dear newcomers, why should you be backward and frightened, as if Among Ourselves were a jury, with cold and critical eyes? We are of one household here, and kindly affectioned, one to another. Do not hesitate to claim the privilege of a hearing if you are moved to speak. Be sure if you take the floor you will have a sympathetic hearing:

The editorial of June 7th induces me to take pencil in hand. June, with its roses and weddings and so many sad endings! Divorce—the foundation of divorce is an unhappy home. Selfishness is probably the most potent factor in the destruction of the home and its happiness. It is the sin of the age coupled with false pride. Oh, we are so selfish and stiff necked that the lovingness that is really within us is smothered and crushed. Brothers and sisters who are married, why is it we live from day to day cold and indifferent to our own until the very foundation of our home is destroyed and

The Theory of the Old Washboard Brought Out in the Rue Washer.

The principle of the old washboard is thoroughly brought out in the New Rue Washer, made at Mapleton, Minn., and advertised on page 5 of this issue. A fine illustration of the machine is shown herewith. In a recent visit to the factory we learned that Mr. Edward Rue, the inventor of the Rue Washer, is a master mechanic, having served his full apprenticeship in the great machine shops in Norway. He came to the United States and engaged in the hardware business. He listened patiently to the many complaints of his customers and his wife about the poor work done by washing machines, their shortness of life, their leaks, their hardness of operation. It set him to thinking. He had an inventive turn of mind, and had patented several useful articles. Why couldn't he build a machine that would do better work and likewise overcome some of the other objections? He bought every make of machine that he could learn of, and personally washed on all of them. He read all he could find pertaining to the subject, even the advertisements. He studied—he worked. He neglected his business until his partner got angry and bought him out. His little capital gone, his brothers helped him. He worked and pondered until his friends began to fear for his reason, but when all but hope was gone, victory was near at hand. He went back to his basic principles and started to do a washing on the "old-time washboard." His wife overheard him saying to himself: "Why not rub on the board under the water? Why not? All the machines that I have ever seen do that very thing. Yes, yes, but they are all wrong." Stopping short in his work he said to his wife, "I have it: I have it now," and retired to his little work shop and built the galvanized iron Rue Washer, the first and only machine that forces air through the clothes. Write for full particulars how to obtain this new washing machine and kindly mention this paper.

we wander apart and too often fill a suicide's grave? What is love? Love suffers long and forgives much. Oh, let us as husbands and wives love unselfishly and divorce will be almost unknown, and the home life will be more as God intended it should be.

What is going to happen, that no one has asked or offered a recipe for canning corn or tomatoes? Such a thing never happened before in all the years I have presided in this Home. Just to be regular let us hear from the canners—those who have succeeded; and also from those who have failed—and right away, please, friends. And now with a final word on borrowing, from the Hawkeye state, we part until next week when there are some capital things coming:

I, for one, believe as Mrs. Lowater does. I do not believe in borrowing. I used to borrow, but I found it was more of a habit one gets into. I haven't borrowed for ever so long and find I can get along lots better, for one is always worried for fear there is something one has forgotten to send home. Again, I had a neighbor once that cured me of borrowing. She was always out of something. I have seen her spend all afternoon in town and send down that very evening for a quart of oil, a cup of sugar or some coffee for supper. She always sent everything back but the coal oil.

fore ordering patterns. There would then be no orders for sizes in which the patterns are not cut, for these are carefully noted in each number. None would then fail to send correct amount with her order, for although it is a frequent occurrence that in an order the writer says, "I do not know your price, for it was not given in your paper," yet if you will look at the foot of the column in any of the papers you will find the price, and it is for each and every one eleven cents. There is no variation whether the pattern is a large or a small one. No alterations are made in patterns, as they are put up before being offered, and must be taken so if at all. Orders are not filled quite so promptly as is implied by "return mail," and those who expect them in such haste are necessarily disappointed. But each and every

[5379 Girl's Blouse Dress, 6 to 12 Years.]

order is filled within a few days after it is received, and it is for the one who orders to look after it at her postoffice, and if she wants to know the date on which it was mailed to write me—not under ten days after her order is mailed, nor should she delay longer than two weeks. Even then in almost every instance the package will be found at the postoffice to which it is addressed or those in charge there will be able to tell you to whom the package was delivered. Please now do not make any mistake about this, that long before you can inquire as above, your order has been filled (if sent correctly) and you will get the package if you make inquiry in time. Of course, though, if you neglected to sign your name that will make some difference. Many do this, and when they write

[5278 Empire House Gown, 32 to 40 Bust.]

me say, "I know I signed my name." To sum up, see that in your order you give number and size, or age, for pattern, enclose eleven cents in cash, not stamps, for each number or pattern, sign your name and give postoffice and rural or box address, and when you write to inquire about it after the time mentioned use same name and address as given in order.

Sorry to have to take so much space for explanations that little can be given in our subject matter, but the two designs need almost no description.

both skirt and waist. This mode continues in favor for all ages, for anything in the way of general wear, and is suited to all the heavy and medium fabrics. If liked, white is always a good selection for the collar, cuffs and shield. Trimming may be added at will. Pattern No. 5379 is cut in sizes for girls of 6, 8, 10 and 12 years.

Empire house gown pictured in No. 5278 is a favorite for home wear, and has the body portion and the skirt separate and joined in a seam. The effect is that of a wrapper and indeed it may be made loose enough to

be exceedingly comfortable, for of course it is intended only for home wear. Lawns, challises and similar soft fabrics are favorites for this mode, but one may suit her own fancy in the selection. The pattern provides for either short or full length sleeve. This pattern, No. 5278, is cut in sizes for 32, 34, 36, 38 and 40 inches bust measure. One may alter it for a larger size very easily. Send eleven cents in money (not stamps) for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

THE SECRET OF THE LAYING HEN.

There comes a man from California who claims to have discovered the secret of egg production and he is willing to part with it for a stated sum. He claims he can tell simply from the outward appearances whether a pullet will develop into a heavy layer or a poor layer, or whether a cockerel is of laying blood or not and will be likely to transmit heavy laying qualities to his daughters.

Heretofore laying qualities of hens had to be determined by trap nests. This new method promises to do away with the cumbersome trap nests, all for a modest sum of \$10. All this is very good as far as it goes and we believe there may be something in the secret. He claims to possess an ideal known as the egg type. Experiments, however, have disclosed the fact that trap nests have revealed heavy layers among hens that have been pronounced poor layers by the Hogan method, the name given the system. Likewise poor layers have been found among those selected as good layers by the Hogan system.

If trap nests are used carefully and persistently there will be little use for the Hogan or any other method and the \$10 one would have to pay for the secret will go a great ways towards planting a number of trap nests where they will do the most good. This method seems to be a safe and certain way to ascertain layers without paying for any secret.

TESTING EGGS.

It is a well known fact that the air cell in the large end of the egg increases with age. If an egg is placed in a solution of salt water it will show an increasing inclination to float with the long axis vertical. By observing this tendency the age of an egg can be determined almost to a day. A fresh egg lies in a horizontal position at the bottom of the vessel; an egg from three to five days old will show a slight elevation of the large end of the egg so that the long axis forms an angle of twenty degrees and an egg a month old floats vertically with the small end downward. This method is said to be more satisfactory to the user of eggs than candling.

NW10

the "Official Route," and a special G. A. R. train will leave Des Moines at 11:30 a. m., August 13th, arriving Minneapolis 8:30 p. m. All comrades and their friends are invited to join this train.

In addition, the regular trains leave Des Moines 8:15 a. m. and 9:05 p. m., arriving Minneapolis 6:48 p. m. and 7:25 a. m. respectively. We distance all competitors. Note early arrival at Minneapolis. Morning train carries cafe parlor car, serving all meals. Night train free reclining chair car and new electric-lighted sleepers; also tourist sleeping

WINTER SEED WHEAT.

As the time is now near at hand when many farmers will be looking around for new and improved varieties of winter seed wheat, we wish to call attention to the seed wheat advertisement of Ratekin's Seed House, of Shenandoah, Iowa, which will be found on page 5 of this issue. This old, reliable seed house have made the growing and importation of new varieties of winter wheat a specialty for many years. Five years ago they imported seed direct from Russia, of what is now known as Ratekin's "famous" Malakoff. This wheat is what might be termed a hard wheat—bearded—and is claimed to be one of the hardiest, if not the hardest, varieties of winter wheat grown—that it is adapted to a very wide range of conditions, including climate and soil. It has successfully matured crops as far north as Minnesota and the Dakotas, and as far south as central Texas, and has made the phenomenal record of sixty-two bushels per acre. Experimental stations everywhere have pronounced this new wheat one of the surest croppers, largest yielders and best quality of milling wheat grown. To all wheat growers who expect to sow wheat or make a change in seed the coming season we would recommend they write at once for catalog and full descriptions of winter wheat, rye, barley, speltz, clover, timothy and other grass seeds. The catalog is free and a postal card will bring it to your door. The address is Ratekin's Seed House, Shenandoah, Iowa.

cars on August 13th. Double berth, accommodating two people, \$1.

Round trip from Des Moines \$5.95. Tickets on sale August 11, 12, 13 and 14. Limit August 31, with privilege of extension to September 30, on payment of 50 cents extra. Special rate one cent a mile from all other points.

Ask your agent to sell you via the M. & St. L. and you will have the best possible trip.

For further particulars, maps, etc., call on your local agent or address W. K. Adams, D. P. A., 512 Walnut St., Des Moines, Iowa.

SUMMER VACATION IN COLORADO.

LOW RATES VIA ROCK ISLAND LINES.

Colorado, as a place for recreation, is the choice of many thousands of summer tourists.

Colorado is a land of clear, pure air and golden sunshine. It is a land of sparkling mountain streams and glassy-surfaced lakes. There are more enjoyable things to do, more grand sights to see in Colorado than any other place under the sun.

From June 1 to September 30 Rock Island Lines will sell summer tourist tickets at rate of \$21.75 from Des Moines, Iowa, to Denver, Colorado Springs or Pueblo and return. Return limit October 31. July 10 to 15, inclusive, the special round-trip rate of \$19.25 from Des Moines, Iowa, is effective.

This latter rate is authorized on account of the Elks' Annual Meeting at Denver July 16 to 21. Tickets limited to return to August 20.

Very low rates will also be in effect to Glenwood Springs, Colo., Salt Lake City and Ogden, Utah, Yellowstone National Park and to the Pacific Coast, with cheap rates for side trips to nearby points of interest en route.

New and improved train service via the Rock Island is an important feature for the Colorado traveler to consider.

Full details of rates, routes, service and any information desired will be gladly furnished by the Rock Island Ticket Agent at 423 Walnut St., Des Moines, Iowa. Geo. R. Kline, C. P. A.

ROUND TRIP SUMMER RATES VIA RAIL AND BOAT LINES.

The Minneapolis & St. Louis Railroad will sell excursion tickets via rail lines to points in Minnesota, North Dakota, Manitoba, Montana, Oregon, Washington and California. Also, via Great Lakes route to eastern points. On sale daily with return limit October 31st, or until navigation closes. For further information call on or address W. K. Adams, D. P. A., or D. B. Ransburg, C. P. A., 612 Walnut St., Des Moines, Iowa.

OUR SHEEP DEPARTMENT

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep to this office.

THE AGE OF SHEEP.

"Will you be kind enough to explain how to ascertain the age of sheep? Do you ascertain their ages by their teeth or is there some other way to do this?"
Shenandoah, Iowa. F. E. N.

A lamb at birth has two incisor teeth in the lower jaw (there being no teeth above; only a pad), which sometimes are just pressing through the gums and occasionally well developed. Usually be-

fore it is a month old it has eight, comparatively short, narrow teeth, called milk or lamb teeth (1). At about a year old the two teeth in the center of the jaw are shed and a pair of adult teeth come in as shown at 2. These teeth are fan shaped and are much larger than the lamb teeth. At first these teeth are sharp and clean. Later they become dull, elongated and more or less discolored. When these two teeth come the sheep is usually regarded as a yearling, although this is not always the case, since much depends on the way the sheep has been kept.

Two lamb teeth continue to be shed annually and are replaced by broad teeth until the sheep has eight adult teeth, when it is four years old, or has a full mouth. No. 1 in the illustration shows the appearance of the set of lambs' teeth before any have been shed. No. 2 shows the appearance of a sheep's mouth at one year old; No. 3, the appearance of the lower jaw of a two-year-old; No. 4 shows the mouth of a three-year-old, showing the last two lamb's teeth partially pushed away by the adult teeth on the outside; No. 6 shows the mouth of a four-year-old sheep. No. 5 shows the inside view of a three-year-old sheep, showing the narrow and dwindled appearance of the last two lamb teeth before they are shed.

The teeth afford the most decisive test there is for ascertaining the age of a sheep until it is four years old. Sheep that have been well fed or highly kept, such as show sheep, sometimes get their first

teeth earlier than those not so well cared for.

At six years of age the teeth begin to become narrower and longer, and in a year or so some sheep begin to shed their incisors. This is not always regular, for very much depends on the way they have been fed. Where sheep are required to dig frozen turnips from the ground the teeth will be shed much sooner. A broken-mouthed sheep is said to be older than eight years, although there is nothing definite to indicate this. It has been claimed that the mutton breeds begin to become broken mouthed from two to four years earlier than Merinos, which is probably because English sheep are required to pasture turnips in the ground. We have found English sheep in America, where they do not hurdle turnips, to retain their teeth as long as any other breed.

THE IOWA LIMITED.

The Rock Island lines showed a great deal of tact and cleverness in naming their new "Fast Express" to Chicago "The Iowa Limited."

This train places the Rock Island competitors in the "back row" and is Des Moines' "pet train."

Leaves Des Moines 10:55 p. m., arrives Chicago 8:15 a. m. On the return leaves Chicago 10:00 p. m., arrives Des Moines 7:00 a. m.

The equipment is superb—new coaches and chair cars, Pullman's latest sleepers and mission style diners—electric lighted.

While on the subject of trains we must mention the other good trains.

The Chicago local leaves Des Moines at 6:43 a. m. and arrives in Chicago at 7:35 p. m.

The Rocky Mountain Limited leaves Des Moines at 7:50 a. m. and arrives Chicago at 5:15 p. m.

The Colorado Fast Mail leaves Des Moines at 12:40 noon and arrives Chicago at 10:25 p. m.

The Chicago Express leaves Des Moines at 5:25 p. m. and arrives Chicago at 7:00 a. m.

The Eastern Express leaves Des Moines at 9:35 p. m. and arrives Chicago at 7:17 a. m.

Coming back from Chicago it is just as you desire it.

Leave Chicago.	Arrives Des Moines.
7:30 a. m.	9:00 p. m.
8:30 a. m.	6:00 p. m.
10:00 p. m.	7:00 a. m.
10:32 p. m.	9:00 a. m.
11:30 p. m.	11:00 a. m.
2:15 a. m.	11:00 a. m.

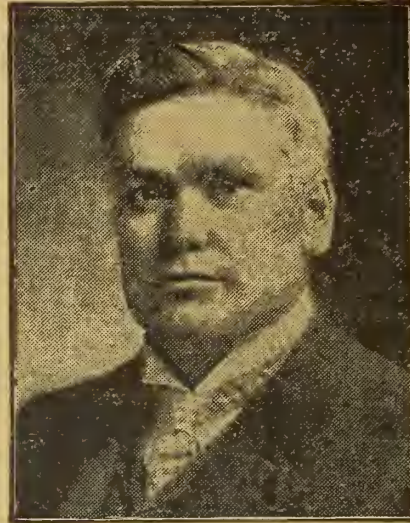

The arrangement for sleeper Chicago to Des Moines on "Fast Mail" train leaving Chicago at 2:15 a. m. is especially made for those who desire to take in the theater and get home before noon the next day. The sleeper is open for occupancy at 10 p. m.

There is nothing too good for Des Moines people and the Rock Island lines are surely giving them what they want.

LOW RATE EXCURSIONS.

The Missouri Pacific Railway and Iron Mountain Route will sell round trip tickets to points in Texas and Louisiana for \$20.00 from St. Louis and \$25.00 from Chicago on the first and third Tuesday of each month. Proportional low rate will apply from other points; also one fare plus \$2.00 to points in Indian Territory, Arkansas and Missouri, and \$25.00 from Chicago to Pueblo, Colorado Springs and Denver with limit of Twenty-one days except to points in Louisiana, Ar-

CONSULTING PHYSICIAN.

more and my hearing is good. If I should need any further treatment I shall be glad to write to you again. The medicines are all right and I think the Vaporizer is fine.

Thanking you for good health, I am,

May God bless you and you remedies"

"Belvidere, Neb., June 5, '06.

Dr. T. F. Williams,
Des Moines, Iowa.

Dear Doctor:—I am feeling excellent at this writing. I have not used more than half of the last treatment, and I think it is needless to take it any longer.

I have a ravenous appetite. I think I could almost eat an iron wedge, I feel that strong.

I shall continue to use the inhalation. I think the little Inhaler a wonderful institution. I find it a preventive of headaches. I have had "others" try it and they say it is ALL RIGHT.

Wishing you success through the remainder of your life, I am,

Very respectfully,

(Miss) Hannah Houts, R. F. D."

"Alva, Okla., April 20, '06.

T. F. Williams, M. D.,
Des Moines, Iowa.

Dear Doctor:—I am feeling so well that I really see no necessity of continuing the treatment. I have a good appetite, bowels are very regular, and I have gained ten or twelve pounds in flesh since taking your treatment. I have a part of the medicine left, which I do not think I will need to take.

My lungs are not uncomfortable any more and my hearing is good. If I should need any further treatment I shall be glad to write to you again. The medicines are all right and I think the Vaporizer is fine.

Thanking you for good health, I am,

Joseph Kiss, Box 69, R. F. D. No. 3.

WRITE ME TODAY---DELAYS ARE DANGEROUS.

THE OMAHA COMMERCIAL COLLEGE.

Prof. M. G. Rohrbough, president of the Omaha Commercial College, says: "We are in the midst of a very prosperous era. The demand for high-grade help is an infallible barometer that registers not only the necessities, but the expectations of business men. In more than twenty years of constant contact with employers, I have never known the demand for competent young people to be so large. We cannot begin to supply our requests for strictly first-class stenographers and bookkeepers. The most notable thing about these requests is that employers are more exacting in their requirements than they used to be, but while they exact more they are willing to pay more. The demand for young lady stenographers is large, but the requests for thoroughly competent male stenographers is unprecedented. Last year was the largest in our history. We expect a very large enrollment this fall. Fortunately, we are now in our large, new building, and have ample room for the future. To an outsider, running a commercial college may seem an easy proposition. I have found it a strenuous one. The responsibility of caring for a large number of young people is very great. While it brings many pleasures it imposes some burdens. The ambitious ones never give us serious concern, but the sluggards often do. Happily, we do not have many of the latter kind. You newspaper fellows need not think you have all the work. I am willing to concede that you have lots of money." The Omaha Commercial College have an advertisement this week on page 6.

NEW HOMES IN THE WEST—SHOSHONE RESERVATION TO BE OPENED TO SETTLEMENT.

Chicago & Northwestern Railway announces round trip excursion rates from all points July 12th to 29th. Less than one fare for the round trip to Shoshoni, Wyoming, the reservation border.

The only all rail route to the reservation border.

Dates of registration July 16th to 31st at Shoshoni and Lander. Reached only by the Chicago & Northwestern Railway.

Write for pamphlets, telling how to take up one of these attractive homesteads.

Information, maps and pamphlets free on request to S. F. Miller, Assistant General Freight and Passenger Agent, C. & N. W. Ry., Omaha, Neb.

EACH TUESDAY THIS YEAR

THE CHICAGO GREAT WESTERN RAILWAY will sell homeseekers tickets to points in Alberta, Manitoba, Minnesota, North Dakota, Saskatchewan, western Ontario and Wisconsin at rate of one fare plus two dollars for the round trip. Remember, THE CHICAGO GREAT WESTERN RAILWAY is the only line from this section which runs three solid trains daily to the Twin Cities. Also remember that on the return trip you can take any one of our four trains, making it certain that you will not have to wait but a short time for connection at St. Paul and Minneapolis. Shortest time, best equipment, best service and connections. Call on or write to E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

HARVEST HANDS—NORTHWEST.

For parties of five traveling together on one ticket, The Chicago Great Western Railway will have on sale the entire month of August tickets at rate of \$14.50 per capita to nearly all points on the Great Northern, Nor. Pacific and Soo Lines in Minnesota, North and South Dakota. On the return trip, rate will be \$1.50 higher. For full particulars address E. J. Sawyer, 514 Walnut St., Des Moines, Iowa.

ARE YOU GOING ABROAD?

To Europe, Alaska, South America, China, Japan, Australia or around the world. Full information, details, lowest rates can be procured from A. J. Cheeseman, C. P. & F. A., Chicago & Northwestern Railway, 401 Walnut St., Des Moines, Iowa.

WE BUILD YOU A HOUSE FREE OF CHARGE

and sell you fertile land at a low price and on easy terms, within 25 miles of St. Paul and Minneapolis. This is the greatest proposition ever made to readers of this paper. You have your choice of 40 acres or more out of two million acres of the splendid lands of Northwestern Wisconsin. The price is only \$7.50 to \$12.50 an acre, and to give you a good start we will build the finest frame house in the world, pure soft water, ample rainfall, land that will grow the FINEST KIND OF CROPS. What more can you ask? Write TO-DAY for MAPS and FULL INFORMATION.

FARM LANDS FOR SALE.

THE CHEAPEST AND THE BEST ON THE MARKET.

THESE lands are in southern Minnesota and South Dakota; in Yellow Medicine county, Minnesota, and Deuel county, South Dakota, in the fourth tier of counties north of Iowa. You can raise anything in these parts that you can raise in northern Iowa. A good corn and stock country. These lands lie well, good black soil. Failures unknown in these parts. Lands for one half the price that you can buy Iowa lands for. Improved farms from \$30 to \$40 per acre, wild lands from \$20 to \$30. Why go to North Dakota and Canada and pay practically the same for those lands that you would pay us? Buy your round trip tickets to Gary, South Dakota, over the C. & N. W. Ry., take receipt, bring the same to us, we will refund your fare on any purchase. Excursions every Tuesday. For full particulars write, GEORGE W. JOHNSON LANDS COMPANY, State Bank, Gary, South Dakota.

FIELD NOTES.

Mr. W. W. Wheeler, of Harlan, Iowa, has a few Hereford bulls for sale.
 Large Improved Yorksires are offered for sale by Mr. F. Rabeier, of Leigh, Neb.
 A small herd of Short-horn cows are for sale by Mr. Delmar McCann, of Kennard, Neb.
 Two good Orion boars are offered for sale by Messrs. A. B. Easter & Son, of Fremont, Neb.
 Four good young Short-horn bulls are offered for sale by Mr. W. E. Cutler, of Corydon, Iowa.
 Seven choice young Short-horn hells are offered for sale by Messrs. Reubel Bros., of Rockwell City, Iowa.
 Mr. H. J. Hess, of Waterloo, Iowa, will hold a sale of Aberdeen Angus cattle at Waterloo, Iowa, on January 16th.
 Mr. M. M. Elmendorf, of Lacona, Iowa, the Duroc Jersey breeder, offers bred sows, fall hogs and gilts for sale.
 Messrs. John Viles & Son, of Vinton, Iowa, will make low prices on ginseng roots and seeds. Their advertisement appears on page 5.
 Messrs. Young & Duncan, of Madison, Neb., offer a grand lot of Poland China boars for sale. They have lots of size, with ample quality.
 If any of our readers wish to purchase Homer pigeons they will find them advertised on page 13 of this issue by Messrs. J. G. Viles & Son, of Vinton, Iowa.
 Kansas farms ranging in size from forty to 700 acres, and alfalfa lands in western Kansas are advertised for sale on page 15 of this issue by Mr. J. W. Bronston, of Garnett, Kan.

The best bunch of Duroc Jersey pigs that Mr. Smith Brown, of Waterloo, Neb., ever raised are now on his farm. Book an order with him and you will get the best. Write him at once.
 Mr. E. E. Etter, of Utica, Neb., is now offering some very good spring pigs sired by 2d Surprise, Redeemer and a son of Duroc Challenger. If you want size and finish write this gentleman.
 Twelve head of young Aberdeen Angus bulls are offered for sale by Messrs. White Bros., of Perry, Iowa. They belong to the Blackbird, K. Pride, Trojan Erica and Queen Mother families.

Choice Duroc Jersey pigs by Ohio Chief, Proud Advance, American Royal and Brilliant, and by the Iowa State Fair prize winning boar, Ben Davis, are offered for sale by Mr. J. S. Teal, of Lamoni, Iowa.
 Thirty fall hogs and forty spring boars, sired by Matchless Perfection, Matchless Perfection Jr., the sweepstakes boar, Meddier Boy and Correct I know, are offered for sale by Messrs. Henry Bros., of LeMars, Iowa.

The Ardmore Stock Company, of Holstein, Iowa, are offering a few good young Short-horn bulls for sale sired by Imp. Scottish Pride and Imp. Lord Mount Stephen. They also have a grand lot of Berkshires for sale.

The Fisher Live Stock Company are offering some very good Chester Whites in our columns. Look up the advertisement on page 20 and write them for prices. They will price worth the money. Write them at Hastings, Neb.
 Anyone wanting a Poland China boar sired by a 1,000-pound bog should write Dr. H. Pritchard, of Wisner, Neb. He has a nice bunch by his noted boar, Big Tom, as well as a good bunch by Wisner Chief, a son of Chief Tecumseh 3d.
 Those of our readers who are thinking of making cement fence posts or using concrete building blocks, would do well to write to the Equitable Specialty Company, of Des Moines, Iowa, for catalog. Their advertisement appears on page 21.
 Mr. Jesse Gouge, of Waterloo, Iowa, wants registered cattle in exchange for a good quarter section of prairie land located in the Red River Valley, twenty miles northeast of Crookston, Minn. His advertisement appears on page 24 of this issue.

Mr. A. Wilson, of Bethany, Neb., has some very fine pigs sired by Aethelred by Tip Top Notcher. Also some by Morrison's Bell Top, Oblo Chief and a son of Crimson Wonder. He purchased the top sow, Morrison's Peach last winter for \$410. She has a very fine litter by Ohio Chief.
 Mr. Tbos. Nelson, of Clay Center, Neb., is in line to make them all go some this fall. He has as fine a crop of spring pigs as we have seen and with the line of breeding back of them they should be more appreciative than ever. Mr. Nelson has one of the best sons of Improver 2d at the head of his herd. Improver Jr. is a very large hog, with a good, strong back, good, heavy bone, nice head and ear and a very good length. His get are very much of his type. One of these would not hurt any man's good herd.

Mr. Nelson will probably be at the fairs this fall with a class of good youngsters. You should keep your eyes open for his show. The sows in the herd trace to Ohio Chief and other noted sires.

Mr. A. E. Poush, of Chariton, Iowa, writes: "I have choice Duroc Jersey boar pigs by five of the most noted prize-winning sires and I am now booking orders for fall trade. Just tell the Duroc Jersey men who are looking for a boar that I have the goods and will price them right."

Messrs. Dice & Garber, of Beaver Crossing, are still doing a good business in the Duroc line. This reliable firm have always made it a point to ship out only the tops and this alone is responsible for the many orders received. Look up the advertisement on page 22 and write them.

Mr. W. A. Kirkpatrick has some very fine spring pigs sired by a son of the great Crimson Wonder. This yearling has many good pigs that will please you. Remember what the Crimson Wonder blood did last fall at the shows. If you are interested write Mr. Kirkpatrick, at Lincoln, Neb.

Mr. F. A. Ham, of Saronville, Neb., has for sale several yearling sows bred for September farrow, and two two-year-olds. They are all in good condition, not very fat, and will be priced cheap if taken at once. He also has a nice lot of spring pigs sired by Ham's Challenger and Theodore 2d.

Mr. O. L. Mossman, of Polk City, Iowa, breeder of Duroc Jersey swine, claims January 28, 1907, for his spring sale. Mr. Mossman has a likely bunch coming and breeders will do well to make a note of his sale date and aim to attend. His regular card will start in the columns of The Homestead soon.

A 480-acre improved farm is offered for sale by the owner, Mr. J. F. Schwantes, of Big Stone, S. D., in his advertisement on page 15 of this issue. Mr. Schwantes considers this land equal to good Iowa farm land, and he proposes to sell it at half the price. Write him for further particulars in regard to it.

If any of our readers want a good young Scotch bull it will pay them to go and see Messrs. C. W. Daws & Son, of Harlan, Iowa. They have two choice youngsters sired by the International champion, Nonpareil King, besides several other good young bulls. If it is quality and individual merit you want you will find it in the Daws bulls.

F. A. Kruse, of Waco, Neb., is having good luck with his pigs. He is now offering some choice pigs sired by his herd boar, Fashion Improver Jr. Mr. Kruse also offers some choice pigs by 2d Surprise Redeemer. This young breeder has some very good pigs and you cannot go wrong by writing him about them. Mention The Homestead when writing.

A Poland China brood sow sale that should command the attention of all progressive breeders is announced by Mr. A. W. Holland, of New London, Iowa, on November 9th. Mr. Holland is one that takes pride in his stock and will put up the best lot of open brood sows in his fall sale that he has ever raised. Watch for announcement before sale time.

Mr. J. S. Price, breeder of Poland China swine, of Muscatine, Iowa, writes that he has recently purchased the show and breeding boar, T. R. Perfection 62942, of Mr. E. H. Ware, of Douglass, Ill., and that he now has him at his home farm which is in Rock Island county, just across the river from Muscatine. Mr. Price gives the consideration as \$1,000.

Mr. Henry Dorr, of Remsen, Iowa, the well-known Poland China breeder, writes: "My hogs are doing fine and I never had a more even bunch at this season of the year. I will have fifty boars for sale, fourteen of which are fall boars. Just say to Homestead readers that the first come first served, and I will not ship out a pig that I don't think is all right."

Mr. W. H. Thompson, referee, of Collins, Iowa, is offering a 240-acre farm near Collins, Story county, Iowa, for sale in his advertisement on page 15 of this issue. There is a six-room house, corn cribs, granaries, good well and some fruit on the place. The land is a deep black loam soil and with a little more tiling every acre is plow land. It will be sold cheap to close an estate.

Two hundred March pigs to select from is the record of Mr. Chas. M. Hulbert, the Poland China man at Oakland, Neb. These are sired by Oakland's Prospect, Chief Enterprise and Nemo L's Oakland, three of the best boars in Nebraska. He has a few good fall boars for sale and will book an order for a spring pig at any time. If you want a Poland China boar it will pay you to see Mr. Hulbert. He has just what you are looking after.

Mr. Oliver Hammers, of Malvern, Iowa, one of the best-known Aberdeen Angus breeders in the state, has over 100 head of cattle now on his farm, which represent the best-known families of the breed. He has a grand lot of young bulls on hand, nearly all of which are sired by his imported Pride bull, Plumer 41321. Anyone wanting a good young Aberdeen Angus bull will find just what they want in this bunch, both in the individual merit and in point of breeding.

A reader of The Homestead who wishes to change his location and desires to buy land in Missouri will be interested in the announcement of Messrs. A. J. Jones & Co., of Pleasant Hill, Mo., that appears on page 15 of this issue. They are offering 160 acres in Jackson county of the best black soil, level land; all in grass; plenty of fruit; well fenced, and a fine seven-room house and other good improvements, at the low price of \$35 per acre. For further particulars read the advertisement and address the advertisers as above.

Mr. L. L. Overholser, of Diagonal, Iowa, has a good crop of Durocs again this year and his October 17th sale will contain only the tops of the spring pigs. The sire of most of his pigs is King Walnut 37893, a son of Improver II., but he also has pigs by his well-known boar, Ringleader 37811, as well as several litters by outside boars. Bonny Maxwell, a daughter of King Perfection, and one of his best brood sows, has a splendid litter by Proud Advance Jr., and Keepsake Lady has a good Ringleader litter. The latter sow farrowed twelve pigs, six sows and six boars. Another good sow, Percy 2d, has a

nice litter by King Walnut, and Iowa Queen Girl has a litter by the old sweepstakes boar, King Perfection. Mr. Overholser will sell some matured brood sows in his coming sale and these will all be bred to Ringloader. Watch for his announcement in due time.

Mr. Roy Stacy, of Rockelle, Ill., breeder of Duroc Jersey swine, writes: "I am not raising as many pigs as I generally do, but what I have I am giving extra care. They have in them the blood of such hogs as the grand boar, Ohio Chief. I would be pleased to hear from any of The Homestead readers who are looking for a good boar." See his advertisement on page 21.

"My pigs," writes Mr. B. R. Burt, of Coggon, Iowa, breeder of Chester White swine, in sending in copy for his advertisement found on page 19, "are coming along in good shape. I have a nice lot of hogs to choose from which will bear a close inspection. I will meet those who desire to see my stock at the train and give free accommodation. Good connections can be made at Cedar Rapids and Manchester, and I can ship either by American or United States express. Those in need of a good Chester White, should drop me a line, as my prices will be reasonable."

We are always glad to call to the attention of our readers the merits of good stock, regardless of the breed, be it horses, cattle, hogs, sheep or poultry. At this time the firm of Messrs. Hanks & Bishop, of New London, Iowa, breeders of Durocs, are in mind. A representative of The Homestead recently inspected the herd above mentioned and was well pleased with this year's pig crop. Messrs. Hanks & Bishop will show at the Iowa State Fair some of their "pets," and breeders will do well to look them over carefully. At a later date their card will be found in the columns of The Homestead.

In sending in copy for his advertisement found on page 23 of this issue of The Homestead, Mr. John Lefebure, of Fairfax, Iowa, breeder of Short-horn cattle, writes that he has for sale several Scotch and Scotch-topped cows and heifers which will be sold very reasonable. Many of these cows have calves at foot, and are rebred, while others are soon due to calve. Mr. Lefebure is thoroughly reliable and his Short-horn herd ranks among the best. Homestead readers cannot go wrong in writing or calling on him if in need of high-grade stock. Mr. Lefebure also has a nice lot of thrifty spring pigs of the Chester White variety for sale. Write him for prices and full particulars, and mention The Homestead.

Messrs. Maasdam & Wheeler, of Fairfield, Iowa, are well stocked with good horses of the draft type. They have something like fifty head, all of their own breeding. The kind they raise are good ones, which may be seen at their showing this coming state fair time. Horsemen well know what they did last year at Des Moines. At a future date Mr. E. G. Wheeler, one of the firm, will cross the water on an inspection of the good ones over there, and the writer predicts he will return with a nice string, being an excellent judge of horses. They will announce in The Homestead, in the near future, just what they have for sale. Horsemen should watch for their card, and when writing them kindly mention The Homestead.

Mr. Austin Renshaw, of Blair, Neb., breeder of Duroc Jersey swine, writes: "My pigs are coming along nicely; have only twenty-six March pigs, but they are good ones. Have seventy-five of April farrow, and several of May. Have one litter by a Lady Alix gilt and sired by Arion; five litters by Junior Jim and Lady Alix gilts; also have an extra good litter by Long Alix and a Dandelion 2d sow. Will be pleased to hear from former customers, as well as new ones. I have good stock and will sell at reasonable prices. All my pigs have free range of good clover and alfalfa pastures and are built up for future usefulness. I find The Homestead the best medium to reach the buyer I have tried." See his advertisement on page 19.

Mr. Grant Davidson, of Manson, Iowa, the Duroc Jersey breeder who owns Crimson Wonder I am, the Iowa State Fair sweepstakes boar, has a good crop of about sixty pigs this year. These are all sired by Crimson Wonder I am and Iowa Wonder, the latter being his new boar. The present crop of pigs are nearly all out of Dandy Orion and Crimson Wonder sows and are good in color, nice in head and ear and are going to make a splendid offering for the fall trade. His old Leo Tolstoy sow, American Belle, saved nine pigs out of a litter of fourteen by Iowa Wonder and Mr. Davidson expects to get one or two out of the litter that will turn out as good as his old sweepstakes hog. We will enlighten our readers on the outcome later in the season.

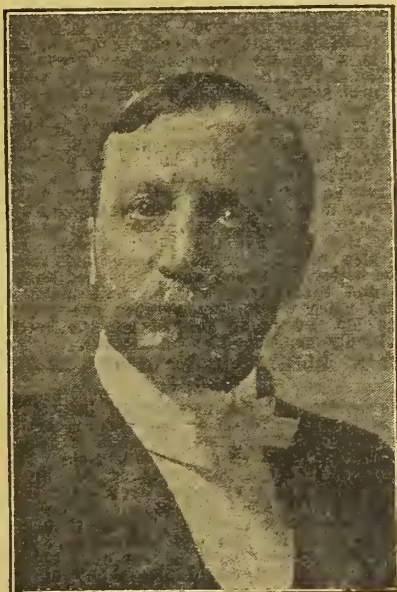

Mr. G. H. George, of Monticello, Iowa, is the proprietor of one of the best Scotch herds of Short-horns in central Iowa. Among his breeding cows are represented some of the most approved and select strains of Scotch blood now extant. Mr. George is now offering for sale his splendid two-year-old Short-horn bull, Ring Master. This bull weighs 2,200 pounds and is fit for the show ring on a moment's notice. He has been exhibited with marked success at the International. Inasmuch as Mr. George has other herd bulls he cannot use this fellow to advantage and is offering him to head some good herd of Scotch Short-horns. He is a very smooth bull, carrying a wealth of flesh evenly laid on. Mr. George will be pleased to make a price on this bull to some appreciative buyer.

On August 22d Messrs. M. P. Hancher, Claus Johnson & Sons, A. G. Hewlett and Thos. A. Fisher, all well-known breeders of Short-horn cattle, at Rolfe, Iowa, will hold a public sale at the farm of Mr. Hancher, near town. Included in this sale will be some splendidly-bred and exceptionally choice Scotch and Scotch-topped bulls, as well as some grand, good cows and heifers. Among the choice bulls in the sale will be Choice Goods Ury, a ten-months-old son of Carter's Choice Goods, one of the greatest sons of the famous old Choice Goods. His dam is Ury Lady of Roseneath by Morning Star and he traces to the Ury tribe. He is a nice red, with lots of style and character and will make a good herd header for someone who is looking for a Scotch bull. Messrs. Claus Johnson & Sons will offer Mysie's Lad, one of the most richly bred Mysies that will be

sold this year, and he is another herd-heading proposition. He is a red in color and will be one of the good things in the sale. Mr. Thos. Fisher will offer a son of his former old Scotch bull, Prince Athene, and he is one of the best individuals that will go into the sale. Mr. Hewlett will sell a number of bulls by Aberdeen Prince, and fifteen head of females. There will be a number of excellent Scotch cows in the offering and it will pay Short-horn breeders to attend this sale. Homestead readers should write at once for catalog to Mr. M. P. Hancher, Rolfe, Iowa, and please mention The Homestead.

Messrs. Rosenfeld & Siverly, proprietors of the Rosengift Farm herd of Aberdeen Angus cattle, of Kelley, Iowa, in sending in Angus copy for their advertisement found on page 24 of this issue of The Homestead, write: "We beg to report that at the Pierce Dispersion sale we were the purchasers of Blackene 72214, the three-year-old Blackbird bull that Messrs. Pierce had been using in their herd, which should be a guarantee that he is a high-class bull. Blackene was purchased after an inspection of his calves, and on the seasoned judgment of some of our old breeders. Quality Laddie has been disposed of and Blackene will be the head of the herd from now on, assisted by Keillor Victor 3d. Cattle at Rosengift never looked better and the calves are doing especially well and number around twenty. Riveton Pride 2d has a splendid bull sired by Keilberg that we think is very promising."

We publish herewith a half-tone of Mr. O. H. Longwell, president Highland Park College, Des Moines, Iowa, one of the most prosperous schools in the middle West. Mr. Longwell is one of the oldest and best-known

educators in the state, and mainly through his efforts has the school been pushed to the very front ranks of Iowa educational institutions. The school is offering a fine course of instruction and any of our readers can get a catalog by sending to President Longwell and kindly mentioning this paper.

LIVINGSTON'S PIGS DOING EXTRA FINE.

The well-known breeder, Mr. T. L. Livingston, of Burchard, Neb., is rounding up his pigs in good shape. Mr. Livingston always has some of the good ones and you can depend on this herd for the right kind. Watch for his advertisement in September.

OLD ENGLISH SHEPHERD DOGS.

Mr. J. G. Truman, of Bushnell, Ill., manager of Truman's Pioneer Stud, has several imported English shepherd dogs which he will be glad to furnish prices on to readers of The Homestead. These dogs are from imported stock and are well trained. Kindly mention The Homestead when writing.

SCOTCH COLLIES.

Messrs. Manlove Bros. & Norris, of Bowen, Ill., have some very well trained Scotch Collie pups for sale which they will be glad to dispose of at reasonable prices. Any reader of The Homestead will do well to write this firm if wanting a Scotch Collie, as per advertisement on page 22 of this issue, mentioning The Homestead.

A PERCHERON STALLION FOR SALE.

Messrs. Marston Bros., of Mason City, Iowa, have a large, heavy-boned, bay, four-year-old Percheron stallion for sale cheap. He is a ton stallion in condition. He is thin now, as he has been in service and has made half of a team all season in the field. He is thoroughly well broken and of fine, tractable disposition. Call on Dr. Marston, 109 1/2 South Main street, Mason City, Iowa.

SCOTCH BULLS.

Mr. Henry Matern, of Lonestan, Ill., has a new advertisement on page 19 of this issue in which he is offering two extra good Short-horn bulls for sale. They are pure Scotch in breeding and are individually good enough to head some of the strong herds of the breed. Further information in these columns next week. Write Mr. Matern if in need of a good Scotch bull, kindly mentioning The Homestead.

BRODSKY'S GREAT SHORT-HORN SALE.

One of the great closing out sales of the year will be that of Mr. L. Brodsky, of Plover, Iowa, on August 23d. No sale held so far this year has contained such a high per cent of Scotch cattle as will be offered in the Brodsky sale. He will sell seventeen head of richly-bred Mysies and sixteen Dorothys, two of his most noted and best families, besides a lot of other well-known Scotch families. The Dorothys have become noted all over the West both for their milking and fleshing qualities, and the Brodsky herd has been the foundation source of this family in the West. He will offer six choice-bred Miss Ramsdens and two Miss Buckinghams. There will be ninety head in the sale and

fifty head of these will be straight Scotch cattle. It is an absolute closing out sale, as Mr. Brodsky is retiring from the business. There will therefore be some great bargains in Scotch cattle in this offering. Homestead readers should write at once for his catalog and please mention The Homestead.

IOWA FARMS.

Messrs. Hamilton Bros., of Winterset, Iowa, whose advertisement appears on page 15, write us that they have the finest list of Iowa farms for sale this year that they have ever had, and can sell them at prices that make them bargains. These farms are well improved and are located in the great corn and blue grass region of the state. Send for the list which contains some fine bargains. The terms are most liberal to purchasers.

BUY A WRIGHT STOCK FEEDER.

How many hog breeders would buy a Wright Stock Feeder if they only knew what it would do for the pigs? With one of these feeders every pig gets its full share of the feed and there is no waste of the feed, as is the case under the old system. Thousands of the best hog raisers in the West testify to its merits by using the Wright Stock Feeder, manufactured by Mr. C. A. Wright, of Rosendale, Mo. Kindly send your name for circular, telling all about it and be kind enough to mention this paper.

THE MAN THAT FITTED JUNIOR JIM.

The writer had the pleasure of visiting the former home of Junior Jim, the great prize-winning boar of Nebraska. Mr. Marts has had very hard luck this spring and to date he has about twenty pigs. The Junior Jim sows on the premises are looking fine and show the likeness of the sire. Mr. Marts' herd at Liberty, Neb., is now headed by a son of the great boar, Billy K. This herd will be in line to offer some very good pigs in a short time. If you are in need of anything in the Duroc line write Mr. A. Marts, at Liberty, Neb.

TWO FINE FARMS.

Mr. J. H. Lipscomb, of Kansas City, Mo., has two fine farms close to Kansas City, that he is going to sell at a sacrifice. This is due to the fact that it is a forced sale by creditors, and the price asked for these farms, Mr. Lipscomb says, is about one-half the actual value. Mr. Lipscomb is not gifted with exaggeration, and whatever he says regarding the farms can be relied upon, and prospective purchasers will find conditions exactly as represented. It will pay you to write to Mr. Lipscomb at once relative to either one of these farms and ask for full particulars, mentioning this paper.

B. C. MARTS BUYS "KAN'T BE BEAT AGAIN."

Mr. B. C. Marts, the well-known Duroc Jersey breeder, of Polk City, Iowa, has recently purchased from Mr. W. H. Taylor, of Lincoln, Neb., the well-known Duroc Jersey boar, Kan't Be Beat Again. This boar has to his credit sixteen first premiums and seven sweepstakes prizes. In very moderate flesh he weighed 700 pounds upon his arrival at Mr. Marts' farm. As a swine breeder of note, who recently saw this boar, put it, "He is as smooth as a four-months-old pig." Duroc breeders cannot do better than to keep the location of this boar in mind, because later there will be some extra good material obtainable from Mr. Marts' herd. He is one of the reliables in the business and we congratulate him upon his recent purchase.

ROCKFORD HERD OF CHESTER WHITES AND O. I. C.'S.

The advertisement of the above herd of hogs appears on page 20. A recent letter gives us the information that the hogs are coming along nicely. The spring pigs are now ready for shipment and several of the royally-bred ones have already been shipped to their new home. This herd is one of the good ones and the owner, Mr. Jno. Cramer, is a reliable gentleman. You can feel safe in sending him a mail order. Four very fine pigs out of the great sow, Kerr Edina, and sired by Kerr Royal, should be looked after by parties in search of herd headers. Mr. Cramer tells us that these pigs have license to show. The dam is a litter sister to the junior champion at the World's Fair. Kerr Sherman and Kerr Dick were show hogs. They are closely related to these sows.

SHORT-HORNS AT AUCTION AT GENEVA, NEB.

Mr. W. C. McGavock, of Springfield, Ill., usually has on sale day just what he has before advertised and when he announces the Geneva, Neb., auction on August 7th as the greatest Short-horn sale that he has ever held, it is our opinion that he will deliver the goods. With show cattle of every age, a strong and uniform offering of young bulls, a grand string of yearling and two-year-old heifers, and superior show and breeding cows, it would appear that he would easily do all that he claims. He expects to present show herds, both old and young, and to put them together at Geneva for the inspection of those who enjoy such exhibits. One of the strongest features, however, of the auction we have perhaps yet failed to mention, and it is found in the superb Scotch three-year-old show and breeding bull, Bapton Gloster, to be sold with a dozen of his get. Mr. McGavock sold in one of his auctions a bull for \$9,100, but he claims that he has never sold as good a bull as Bapton Gloster with so many of his superior sons and daughters in one sale. The four Cruickshank Orange Blossom females consigned by Mr. I. W. Baughman, of Edinburg, Ill., are indeed attractive. They are high-class individuals and coming from the same strain of this family as the Bellows stock bull and International exposition champion, Master of the Grove, they should not lack for bidders. The eight Cruickshank Butterfly cows and heifers consigned by Mr. C. H. Giller, of White Hall, Ill., should likewise prove drawing cards and those in search of Scotch females should be on hand when they are auctioned. Mr. McGavock wishes it understood that this is the first auction where he has inspected every animal in it and absolutely dictated just what should go into it. There is not, he says, a cull in it and not an animal but what any breeder might be proud to take home with him, and there are few that are more capable of judging in such matters than he is. Breeding animals and

The roof that resists rain, sun, heat, cold, and fire, for years is Genasco Ready Roofing—made of Trinidad Pitch Lake asphalt.

Write for Book N and samples. Ask your dealer for Genasco Ready Roofing.

THE BARBER ASPHALT PAVING COMPANY

Largest producers of asphalt in the world

New York PHILADELPHIA Chicago

Individual excellence have been the requisites for entry, but Mr. McGavock has also succeeded in gathering high-class pedigrees for this occasion. The helleveers in good blood will be stimulated by attendance at this auction, and those who love individual merit will see that it comes with uniform regularity by use of the best blood obtainable. The catalog of such an offering should be interesting reading and Mr. McGavock will be glad to mail it to all applicants.

CAUSTIC BALMS CURED WHERE OTHERS FAILED.

Mr. W. T. Joyce, of Bay Minette, Ala., writes the Lawrence-Williams Company, of Cleveland, Ohio, as follows: "I cannot express myself in regard to the wonderful satisfaction and results I have received of Gombault's Caustic Balsam. I have sold and used considerable of the liniment since I learned of its value. I first tried it on a fine stallion which had been lame for seven weeks, in the left hip. The owner tried almost everything and got no relief. We gave one application of Gombault's Caustic Balsam and the horse has not gone lame since. I have also taken two splints off one horse, one off of another; two spavins off a third, and at present am tending a fourth. I have also used it on myself, having a sty on my eye three days ago. I gave it two applications of Gombault's Caustic Balsam and in four hours after applying the liniment my eye was one-third better." Read the advertisement on page 8.

KERR, THE O. I. C. MAN.

At the St. Louis World's Fair in 1904, Mr. O. L. Kerr, of Independence, Mo., first came prominently before the public as a breeder of O. I. C. hogs. Since the fair Mr. Kerr has gained even more prominence, as he has demonstrated that his winners are producers and that their offspring breed on and on. Private sales from Mr. Kerr's herd have been good, but the public sales where every man who has bought a good one has been present and made his personal selection have been even better. This should be especially gratifying to Mr. Kerr, as each sale has been made on its merits, the hogs bringing just what the buyers wished to pay. To make two sales in one year and average nearly \$55 per head is evidence conclusive that Mr. Kerr was delivering the goods. This season Mr. Kerr has from the matings of his World's Fair hogs produced by far the greatest lot of pigs that have yet been produced in this great herd. On November 2d, at Independence, Mo., some sixty head will be sold, boars and gilts. Any of our readers who may be interested in the O. I. C.'s would do well to write Mr. Kerr about these.

THE EARLES SHORT-HORN SALE.

The collection of Short-horns selected by Dr. W. H. Earles, of Milwaukee, Wis., from his Burwood herd, for his first annual public sale, to be held at the farm, on Tuesday, August 7th, is one which should attract the attention of every Short-horn breeder. For the past few years Dr. Earles has been laying the foundation for a good herd of Short-horn cattle. Care was taken in the selection of bulls to head the herd and the females represent the best Scotch and American-bred families. In making up the consignment for this, the initial sale, some of the best matrons in the herd were selected. Of the offering thirty-five head are mature cows, either safe in calf to noted Scotch bulls or with calf at foot. Rarely does the breeder of Short-horns have such an opportunity as this sale presents. Six bulls are included in the auction, all of the herd-header sort. Those of our readers who are in the market for a herd bull will find what they want in this offering. Four yearling heifers of show-yard type are included. The offering throughout is an exceptionally strong one, both as to individual merit and breeding. Many of the cows are bred to Whitehall Count, a prize-winning son of Whitehall Sultan, and Sightseer, considered by many breeders to be one of the best bulls sold in the recent sale of Mr. F. W. Harding. We wish this week to call particular attention to the bull consignment. Nonpareil of Sunnyside is a three-year-old roan by Nonpareil Victor. His dam, Victoria Bracelet 3d, was by Grand Victor. This bull has been used in the herd and his get are uniform throughout. He has length and scale and substance, with good, level lines and should go to head some good herd. Village Clerk is a Canadian-bred bull of unusual merit. Many of his get are found in the herd and are evidence of the producing qualities of this bull. He will please discriminating buyers and should not be overlooked. Golden Chief is a yearling bull of show-yard type. His sire was Mystic Archer and his dam Golden Coin by Imp. Banker. Both in point of breeding and individuality this bull will fill the needs of critical buyers. Burwood Archer is a son of the noted Mystic Archer. He is just past a year old and bids fair to make something choice. Village Boss is not a year old. He was got by Village Clerk and carries many of the strong points of his sire. Champion of Richmond will be a year old the day after sale. His sire was the noted bull used by Mr. A. Chrystal, of Marshall, Mich., later sold to head the Walnut Hill herd owned by the Flynn Farm Company, Imp. Lovat Champion. His dam was Miss Richmond, one of the best producing cows in Glenfoyle herd. While the bull offering is not large in numbers, it is a very

good one and readers of this paper who are in need of a herd bull should plan to attend this sale. Dr. Earles has been a liberal purchaser during the past few years and is deservingly of the unanimous support of the Short-horn fraternity. The catalogs are now ready and may be had by addressing Dr. Earles. In our next issue we will give further details regarding the female portion of the offering. Write for catalog at once and kindly mention this paper, and plan to be present on Tuesday, August 7th.

PFANDER'S GOOD POLAND CHINA OFFERING.

One of the sales that should attract Poland China breeders this fall is that of Mr. J. W. Pfander, of Gravity, Iowa, which occurs on September 26th. This sale will attract breeders on account of the fact that it will contain one of the greatest daughters of the famous old brood sow, Glantess. We refer to the two-year-old sow, Model Glantess, with ten of her spring pigs. This litter is one of the best of the year and if nothing happens them, should be one of the best money makers that will go through a sale ring this fall. There will also be seven fall pigs out of this same sow in the sale, and four of these will be sows. If some breeder wants a proven brood sow and one from a noted strain, we would just say to him to go buy Model Glantess. Her last litter is sired by Kiever's Thickset, one of his present herd boars. Mr. Pfander has forty-six grandsons and granddaughters of old Glantess in the herd, as well as three of her best daughters. This will be a sale that should attract the best breeders, especially those who want this old Glantess strain.

GILBERT VAN PATTEN'S PIGS STRONG.

A recent letter from our friend, Mr. G. Van Patten, of Sutton, Neb., informs us that the pigs are doing nicely and that some good results are expected. This is one herd that has well-earned the reputation of good breeding, strong individuality and fair dealings. Mr. Van Patten has selected several of his hogs and is now fitting them for the fall shows. The herd has won its share of ribbons whenever shown and we will look forward to another one of the shows. The great breeding boar, Billy, has left many of his get that will make his name remembered. Two of these are at the head of the herd and will undoubtedly prove good ones to use. The noted Billy K. by Duroc Challenger by Orion Chief by Orion, dam Rosebud Lady by Van's Perf. by Auction Boy is one of them. You will notice that this animal is certainly bred in the cream. Bonny K. by Billy and out of Lady Clay by Red Chief I Am by Protection, second dam No. 28 by Higgins' Model is also doing service. These two boars will be at both the Iowa and Nebraska State Fairs and you can expect to see something extra good. Mr. Van Patten never takes out a poor one. The spring pigs are doing nicely. Look up Mr. Van Patten's advertisement on page 22 and write him your wants. Watch for his show at the fairs.

DISPERSION OF THE CHAMPION BABY BEEF HERD OF ABERDEEN ANGUS.

One of the most notable sales of Aberdeen Angus cattle of the year will be that of the dispersion of the Baby Beef herd, the property of Mr. C. H. Gardner, of Blandinsville, Ill., which will take place at Galesburg, Ill., on Tuesday, August 14th. Mr. Gardner was for several years prominent as a breeder of Aberdeen Angus cattle. The Baby Beef herd won numerous prizes at the leading shows of the country. Such bulls as Rosegay, Vala, Vala's Rosegay and others of equal merit have been produced from this herd. The bulls included in this offering are of show-yard merit. No doubt there are among them several which if properly handled will be well up in the prize lists this year. No sale of recent years contains such a strong array of bulls. Sixty head are included in the offering, a number of the cows selling with calves at foot. Several of the bulls are tried breeders, having been used in the herd. The females represent such noted families as Erica, Pride, K. Pride, Queen Mother, Barbara, Heather Bloom, Westertown Rose and others of the fashionable strains, every one of which has produced for Mr. Gardner a champion bull. In our next issue we will give further details regarding this noted offering. In the meantime we advise our readers to write Mr. Gardner for catalog, as per the advertisement on page 20, kindly mentioning The Homestead.

NIDLINGER'S DUROC SALE.

The important sale of Mr. J. D. Nidlinger, of Decatur, Ind., should not be overlooked by the Duroc breeders throughout the middle West. The class of stock offered for sale at this time should be readily taken by the best breeders. Mr. Nidlinger has more than once demonstrated in the strongest show rings that he not only has the class of stock which the best judges favor, but has held the most successful sales in the state in which he resides, his fall sale making the highest average of the state. The boars which Mr. Nidlinger is putting into this sale furnish an extraordinary lot from which to select a herd boar. On page 1 we present a fair likeness of J. D.'s Improver, the second-prize boar at the Indiana State Fair last year in strong competition. His dam, Wilda, was, at the time she was sold, the highest-priced sow east of the Mississippi river, going to Mr. Thos. Johnson, of Columbus, Ohio, at \$380. Messrs. McNeil Bros., of Bowen, Ill., being the contesting bidders. The females constitute what is probably the strongest lot ever put into one sale. The fact that Mr. Nidlinger will not show any stock this year led him to select some of his best sows for this sale, sows which had he intended to show, breeders would not have had an opportunity to secure at their own figures, as will be the case in this sale. Many of them have produced good litters this year, while their produce included in the offering demonstrate the fact that they are good breeders. In a recent letter from Mr. Nidlinger he reports that the stock is coming along in fine shape and will be in excellent condition by sale time. If you are not on Mr. Nidlinger's mailing list, you should write him at once for catalog. He will be pleased to mail them to all who mention The Homestead in writing. If you cannot be present on sale day bid sent to Mr. D. M. Pierce, representing The Homestead, in care of Mr. Nidlinger, will

be carefully handled. See advertisement on page 20 of this issue and write for catalog at once. This sale comes at a time when breeders can leave home without much inconvenience. Plan to be present Wednesday, August 8th, at Decatur, Ind., the guests of Mr. Nidlinger.

WATT & FOUST'S DUROCS.

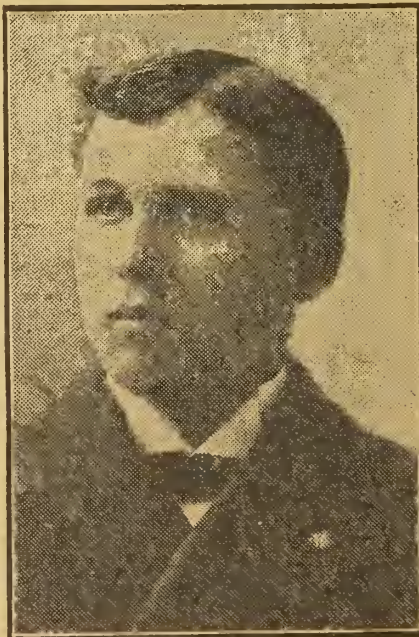

Messrs. Watt & Foust, of Cedarville and Xenia, Ohio, have a new Duroc advertisement on page 22 of this issue which should interest breeders of the middle West. Tip Top Notcher, the grand champion boar at St. Louis, recently sold by Mr. Geo. W. Seckman for \$5,000 and Kan't Be Beat sold for \$2,500, were both bred by this firm. They have 150 spring pigs for sale at reasonable prices that are the best lot they have ever raised. Under recent date Mr. Foust writes: "We have recently sold to Mr. John Morrisseau Kan't Be Beat 10239 (A.) 28067 (N.) for \$2,500. This hog has put as many winners in big shows as any hog living, and our show herd this year is the strongest we ever fitted. We have over seventy-five head of his get, and there are herd headers and lots of them. Golden Rule has proven himself a great breeder, and Tip Notcher's Last is doing his share to make the breed famous. We can furnish anyone wanting something O. K. or a herd header at the right price. Remember we bred the senior champion boar, grand champion boar, also junior champion sow and reserve champion sow, and sire of junior champion and reserve grand champion boar." Look up advertisement and write them for prices, mentioning The Homestead.

MAPLE AND LAWNSDALE HERDS OF DUROC JERSEYS.

The Maple and Lawnsdale herds of Duroc Jerseys are owned by Messrs. Manlove Bros. & Norris, of Bowen, Ill. The best breeding stock to be found was secured in the foundation of these herds and the present crop of pigs in addition to those which from time to time have been sent out from these herds have demonstrated that the selections were correct. At the head of these herds are Big I Am, first-prize boar pig Illinois State Fair 1904; Hambletonian, a prize-winning boar used successfully by Messrs. H. B. Loudon & Son, of Clay Center, Neb.; Veribest, one of the herd boars used by Messrs. Watt & Foust, and Proud Advance, from the herd of Messrs. Johnston Bros. & Newkirk. Such an array of boars is seldom found in one herd and means much to the success of the breeding operations of this firm. They have been liberal purchasers of good stock from many of the leading herds. A litter by Big I Am which should attract attention is out of Lady Tip Top 103034, she by Tip Top Notcher and out of Gold Dust Rose 27354. Another litter by same boar is out of Mildred 71560, she by Perfection Van 10373 (A.) by Sensation 7393 (A.), dam Sally 47602. This sow raised a very good litter and is a good producer. A good litter by Tip Top Notcher is out of Maymie 79408. This sow was sired by Dan B. 9829 (A.) by Chief I Am 8963 (A.). One of the best litters seen by the writer this year was sired by Big I Am and is out of Allison's Sister 75610, she by Oom Paul Jr. 16147 by Oom Paul 7545, dam Golden A. 36592 by Oom Paul K. 7551. A litter by Perfection Chief 28376 is out of Daisy H. by Fairview Chief 17627. Messrs. Manlove & Norris have an extra good bunch of spring pigs which are priced worth the money. They can suit the most discriminating buyers and can furnish pairs and trios not akin. If in need of a good boar or gilt write this firm at once as per the advertisement on page 22 of this issue, kindly mentioning The Homestead.

AN ILLINOIS DUROC BREEDER.

We present this week a good likeness of Mr. John W. Remley, of Lacon, Ill., one of Illinois' successful Duroc breeders. Mr. Remley has made a good start in the Duroc business and has sold much stock to breeders of the middle West during the past few

MR. JOHN W. REMLEY.

years. He is now offering some good, strong, vigorous fall boars for sale at very reasonable prices in his new advertisement on page 19 of this issue. At the head of his herd he is using the good boar, Choice Goods, he by Echo King 13415 by Sensation, dam Decatur Belle 11. 44873 by Corrector 15653. This boar has sired much good stock for Mr. Remley. A number of extra good fall boars are offered for sale at this time sired by Robin Roy 33609, he by None Such 13219, dam Duchess 41 19604 (A.). Breeders will remember that None Such is the sire of Hanley, the boar used by Messrs. McNeil Bros., of Bowen, Ill. The dam of these fall boars is Floro-

dora 11. 96414 by Choice Goods. If in need of a good fall boar write Mr. Remley at once as per the advertisement, kindly mentioning The Homestead.

HAMILTON'S ROYALLY-BRED HERD OF POLANDS.

Mr. L. W. Hamilton, of Kearney, Neb., has one of the royally-bred herds of Poland in the middle West. This gentleman has been in the business for many years and has always believed in the best. His herd today represents the blood of some very choice show hogs, as well as some that have made a reputation as breeders. Moss Chief has always been a factor in the herd and his get are always in demand. This hog has several choice animals in the herd that are hard to beat. Grand Chief Tec. is another that has won his spurs as a sire. Several very large sows are sired by Pawnee Chief. Also some choice blood of the great Chief Perfection 2d and the great Impudence. The above breeding is as good as you could ask for. Mr. Hamilton's last sale made the good average of \$50 on a very large offering. The offering was taken by breeders from Iowa and Nebraska. The crop of spring pigs are doing very nicely and now is the time to send in your order. Don't wait until the crop of good ones have been picked. Look up the advertisement on page 21 and write for prices.

A GOOD BUNCH OF HEREFORD BULLS FOR SALE.

On page 19 of this week's Homestead will be found the Hereford advertisement of Mr. W. L. Dodge, of Hubbard, Neb., who is now offering a nice bunch of bulls for sale. Among these is one exceptionally good animal called Shamrock 6th 226283, just fourteen months old, and he will please anyone wanting a first-class Hereford. His sire is Shamrock 179828, a grandson of old Java, and his dam is a granddaughter of Earl Grove 3d by The Grove 3d. He is a growthy, well-developed young bull, has good lines and is a dark red. He only asks \$150 for him if taken soon and no one need hesitate in buying this fellow. Mr. Dodge also has a half brother to this bull that is a good proposition, besides several other bulls. He will also sell one of his herd bulls, Willard 91332, a grandson of Mr. Tom Clark's famous old bull, Lars. He is an Anxiety-bred bull on the dam's side and he is a good breeder. He will also sell a few good cows and some choice heifers. Anyone wanting a good bunch will find them here, and he will make a special price where any number are taken. Write Mr. Dodge or go and see the cattle and kindly mention The Homestead.

ANTON ROESLER'S WINNING CHIEF BOAR.

The writer had the pleasure of inspecting one of the good herds of the West recently. This herd of large, roomy Poland is owned by Mr. A. Roesler, of Wilcox, Neb. The herd is one of the good ones of this breed and the class of sows found here prove that the owner was after the good ones on the start. We found a herd of sows that are hard to equal for size and uniformity. The large, roomy sows have a line of breeding back of them that would please any of the foremost hog men of the middle West. The crop of spring pigs are very likely ones and many choice prospects are noticeable. At the head of this herd we find the show boar, Winning Chief. This hog was shown last fall at the Nebraska State Fair, winning first in class. He was afterwards used in the McKelvie herd where he sired some very good pigs. Mr. Roesler was after a good hog and was not long in closing the deal after he learned that the hog was for sale. Winning Chief is a son of the great breeding boar, Chief Tec. 3d. He is a very strong boar and would please any breeder. Mr. Roesler will have some of his get to offer you this fall. The Chief Tec. blood is getting scarce and it would be wise for you to look into this offering. The sows in the herd represent the blood of Medium's Likeness by Big Perfect Tecumseh, Great Expansion by Expansion, will certainly please the hog men of this section. Choice Goods by Chief 3d Jr. and some sows by Exception. The herd is very strong and tion. You will notice the advertisement in The Homestead shortly.

GEO. L. BELCHER'S DISPERSION SALE.

We again wish to call the attention of our readers to the advertisement of the dispersion sale of Short-horn cattle and trotting-bred horses to be held by Mr. Geo. L. Belcher, at Walnut Ridge Stock Farm, on Wednesday, August 8th. As we have said before, Mr. Belcher is not selling from choice, but because of the necessity of moving to another climate. We have before us a few pages of Mr. Belcher's illustrated catalog in which are illustrations of some of the foundation cows, their offspring and the stallions that have made his stud of drivers. Col. Harry W. Graham, of Chillicothe, Mo., made a visit to Walnut Ridge Farm, compiled the catalog and has made a most excellent writeup of the farm, the Short-horns and the driving horses to be sold. This will be found on the opening pages of Mr. Belcher's catalog. The first of the Short-horns cataloged is the herd bull, O. C. 179769. Mr. Belcher's foot note of O. C. describes the bull so well that we take the liberty of quoting same in full: "O. C. 179769, my herd bull, is a great individual. You will note by the tabulated pedigree that he is a great-grandson of the noted Imp. Double Gloster 55406, both on his sire and dam's side, a bull of excellent individual merit and rich breeding, that was purchased by Mr. W. A. Harris for use at Linwood, but sold for service in the Blue Valley herd. He belonged to the Sittytown Duchess of Gloster tribe and, like Baron Victor, was a son of Bampton (37763), his dam being 24th Duchess of Gloster by Lord of the Isles (40218), tracing to 2d Duchess of Gloster by the Baron (13833). The crop of calves this spring by O. C. all bear his excellent type and stamp. He puts the extended hind quarters on each of them, as will be seen on sale day. He is great in the back and loin and has a heart girth that reminds one of the noted Grand Victor, that stood at the head of the Clover Blossom herd so long and made history in Short-horn circles for himself and his owner, Mr. Geo. Bothwell. His tabulated pedigree shows him to be all Cruickshank blood, with the exception of the bottom line of dams. His blood lines are intensely Double Gloster, Bampton and Pride of the Isles."

Fatten Your Stock on WATER

Pure Water drunk WHEN THIRSTY makes fat—ask the Veterinarian or your Experiment Station. Give your stock pure, fresh water from Dewey Stock Waterer.

Attaches to any tank or barrel, and by supplying pure, fresh, clean water at the will of the animal and only in such quantities as consumed, HASTENS FATTENING WITHOUT EXTRA FEED—an actual demonstrated FACT. Our FREE BOOK gives the details. All live dealers sell the Dewey. If yours doesn't, we'll sell you direct. Write for book today.

The B.-B. Manufacturing Co. 409 W. Fourth St. Davenport, Ia.

Lot 2 of the catalog is the Scotch cow, Seraphina, got by Imp. Master of the Mint and out of Imp. Simplicity by Cumberland. Then on down the list of sires is found Pride of the Isles, Champion of England, The Czar and Lord Sackville. Beginning with the sire, Czar, and on down, the breeding of this cow is the same as in the pedigree of Messrs. Bellows Bros.' great herd bull, Hampton's Best. Seraphina will have several descendants in the sale. Three are daughters and one a bull, the rest being granddaughters. Among the daughters is Queen of Scots got by Lavender Duke got by the richly-bred Cruickshank bull, Baron Lavender. She is the kind that will please many. Another of her daughters is Ruth Simplicity got by the Barclay-bred bull, Harvester. She is a young cow of much style and quality, is low down and Mr. Belcher has much to say of her milking qualities. She is another of the safe ones to buy in Mr. Belcher's sale. Seraphina's son—Gold Coin—is cataloged as Lot 6. He was got by Lavender Duke, sire of Queen of Scots, is a red and a strong, sappy youngster. The granddaughters, Baroness and Sympathy, were got by Lavender Duke and out of Ruth Simplicity. Both are the smooth-made kind, are stylish young heifers and among the favorites. Belinda Barrington has also raised quite a family for Mr. Belcher. She has seven daughters and one son in the sale. Of these we shall make mention next week. Those interested in good Short-horns and trotting-bred horses should send now for one of Mr. Belcher's catalogs. See page 21 for advertisement and address and kindly mention this paper.

A PROMINENT DUROC BREEDER.

We take pleasure this week in presenting to our readers a fair likeness of Mr. W. L. Stoner, junior member of the well-known Duroc firm of Messrs. T. W. Stoner & Son, of Henry, Ill. This firm have been breeding Duroc Jerseys for many years and have selected breeding stock from the states of Ohio, Indiana, Illinois, Iowa, Missouri, Kansas and Nebraska. They have been conservative in their purchases and have bought with good judgment. Their sales have always

W. L. STONER.

been conducted in a business-like manner, and the prices received have in all cases been satisfactory to both purchasers and to themselves. Their fall sale, which will be held on October 10th, will contain many of the best individuals their herd affords, and an invitation is extended to readers of The Homestead to be present on that date. In the meantime should any reader be in search of a good fall boar or a spring male they will find it to their advantage to correspond with or visit this firm before making selection. Their herd numbers nearly 300 head and ample numbers are found from which to select. Look up the advertisement on page 22 of this issue and write at once for prices and descriptions, kindly mentioning The Homestead.

HOW TO VACCINATE CATTLE AGAINST BLACKLEG.

Blackleg is such a disastrous disease that we want to warn our readers against it. If there is none of it in your neighborhood you may consider yourself lucky, but at the same time, be on the lookout for it. Cut this article out and paste or pin it in a place where you can refer to it. There is almost sure to come a time when you will want to know about blackleg—what it is and what to do for it. Blackleg is a fatal disease of young cattle. Very few recover from it, and so far as is known no medical treatment will do any good after the animal is attacked. The only thing to do is to prevent it by vaccination. Vaccinate in the spring and in the fall, even if there are no signs of the disease and none in the neighborhood. It's the mere question of saving money—of spending \$1 to save \$10 or \$20. The question is not, "Can I afford it?" but "Can I afford not to?" A few calves or yearlings lost would pay for many vaccinations. By using Blacklegoids, vaccinating is made so easy, safe and sure that there is no good reason for not doing it. There was a time when to vaccinate meant grinding a powder in a mortar—mixing with water, filtering, measuring and injecting with a hypodermic needle. This required a great deal of time and even then was not accurate. The quickest, surest and safest way of doing the work is with Blacklegoids. With

these there is no dose to measure, no liquid to spill. A Blacklegoid is a little pill of blackleg vaccine—one pill is a dose. To use it, simply put it in the hollow needle of the injector, thrust the needle under the skin of the calf, push the plunger, and the work is done. Because they are so easy to use and effective, Blacklegoids are perhaps the best-known and most widely used blackleg vaccine. Write the manufacturers for a little folder about blackleg and giving further information about Blacklegoids. It is free. Address Parke, Davis & Co., Detroit, Mich., and mention this paper.

THE GRAND ISLAND SHORT-HORN SALE.

Fifty Short-horns, consisting of some fifteen bulls and thirty-five cows and heifers will be auctioned in the McGavock sale at Grand Island, Neb., on August 11th. Mr. Edward N. Hurley, of Wheaton, Ill., is disposing of his herd and has selected sixteen of his best cattle for this occasion. He includes three Scotch cows close up to the imported stock and that should interest buyers for this popular sort. He also catalogs the two-year-old stock bull, Diamond Jim, by Imp. Bapton Diamond, a bull that has a remarkable record on both sides of the Atlantic as a sire of the very best animals of the breed. The Ardmore Stock Company, of Holstein, Iowa, catalog three very high-class bulls sired by Prince Matchless, Imp. Lord Mount Stephen and Imp. Scottish Pride, the two latter mentioned being Duthie-bred bulls. They also include three Bates cows that are from sires and dam that were bred by Mr. Martin Flynn, and they have calves at foot by and are in calf to the Scotch bull, Imp. Scottish Pride. Benjamin B. Dean, of Glenwood, Iowa, and Messrs. Riley & Caswell, of Albion, Neb., also have good consignments to the auction. The bull offering is a good one throughout, consisting of strong, vigorous animals in good breeding condition and ready for immediate service. Good results will follow their introduction into that country and we trust they will be appreciated. Mr. McGavock will be glad to mail catalogs to all applicants. See advertisement on page 23.

A NEW IMP. SCOTCH BULL FOR WALNUT HILL.

The Flynn Farm Company, proprietors of Walnut Hill Farm, Des Moines, Iowa, have recently come into possession of Imp. Lovat Champion 157617, one of the greatest Scotch bulls of the present day. He is a compact red bull of the celebrated Broadbrosks family, was bred by Lord Lovat, of Scotland, and was shown at the Inverness spring show and sale in 1899, at which time he won first money, as well as the Highland Society medal. He was then purchased by Mr. Duthie, of Collynie, and used three years, during which time Mr. Duthie repeatedly refused to price him, though he had many tempting offers. He came into the possession of Mr. A. Chrystal, of Marshall, Mich., on account of an accident which befell a bull imported by Mr. Chrystal from the Duthie herd that was ruined shortly after his arrival. Mr. Duthie proposed to return Mr. Chrystal's money or send him two yearling bulls or Lovat Champion. Mr. Chrystal chose the latter, and now this noted bull comes into the possession of the Flynn Farm Company. The late Martin Flynn always emphasized the importance of using good bulls, and his sons in the management of his estate are placed in a position to carry on the good work of their father. With the splendid Scotch cows that are now in the herd at Walnut Hill Farm, it may reasonably be expected that the outcome will be something extra good. Announcement is made that the sale will be held by this company at the farm, eight miles from Des Moines, on August 16th. Catalogs are ready for distribution.

THE MAPLE GROVE HERD OF DUROCS.

Mention has been made in the columns of this paper from time to time of the Maple Grove herd of Duroc Jerseys, the property of Messrs. McNeil Bros., of Bowen, Ill., and we take pleasure in recommending their stock to our readers. This firm have done as much as any firm toward the maintenance of the Duroc Jersey in the front rank of America's pork breeds. At the important sales of the past year they have been liberal buyers and in many cases selected the best offering afforded. From Mr. J. D. Nidlinger they secured the double prize winning boar, Hanley 4245. He was first in class at Indiana and Ohio State Fairs of 1905 in very strong competition. Messrs. McNeil Bros. were the contesting bidders on Wilda, the prize-winning sow in the same sale which went to the herd of Mr. Thomas N. Johnson, of Columbus, Ohio, at \$380. Messrs. McNeil bidding \$375. They secured two litter mates to Hanley in same sale, sows which had won in herds at Indiana and Ohio State Fairs. At the Fagan, Browning, Hess & McCabe sale Messrs. McNeil Bros. bid \$690 on the \$1,000 sow, Helen Blazes III., and joined with Messrs. Thomas & Hogsett, Manlove Bros. and H. B. Griffiths and formed the company which compelled Mr. J. Coy Roach, of Girard, Ill., to pay \$1,000 for this sow. Other instances could be told of the enterprising methods of this firm, but it is sufficient to state that they have been liberal purchasers from many of the most important herds of the country. Hanley has proven a breeder of excellent merit. His sire, None Such, was bred by Messrs. T. W. Stoner & Son, and later sold to Mr. J. D. Nidlinger, in whose hands he won first at Indiana State Fair, 1904. His dam, Bright Star II. 36490, was sired by Echo King, he by Sensation, dam Bright Star by Corrector. On page 4 we present a good likeness of Hanley in show condition. The brood sow sale held by Messrs. McNeil Bros. in January made the highest average up to that time ever reached east of the Mississippi river. A litter of much merit by Tip Top Notcher out of Mabel Justice 117204 by Best of Notchers 20725. The dam of this sow is Hattie Gold Dust III. 11428 by Woodburn's Perfection 2123. The Gold Dust family in the herd of Mr. Geo. W. Seckman have produced some of the best stock and the get of this family have been winners at many of the leading shows. Another litter by Tip Top Notcher out of Golden Hatty 117208, she by Major R. 29163, dam Fancy Hatty 93352 by Best of Top Notchers 20727. In Messrs. McNeil's sale every sow the dam of anything offered for sale was bred by them. This fact certainly demonstrates their ability to breed the cor-

rect type of hog. A litter by Hanley which will attract the attention of breeders is out of Arnie Demisk 41928, she by Bowen Boy 13801 by Lord Russell 5709, dam Mollie Wilcox 32430. Irene Clayton 32658, the dam of the highest-priced gilt in the winter sale, has a splendid litter sired by Hanley. Miss Gold Bug 105410 and litter sister, Maple Grove Queen 105408 by Cantine Boy 16319, dam Jessie Bartlett by Denver, have splendid litters by Hanley. My Dream II. 94194 by A Top Notcher, one of the sows in the young herd which won first at Illinois State Fair, 1905, as produce of sow, has a good litter by Chief No. 1. A litter sister to Hanley called Belle Hanley 105404 has a very good litter by Big I Am, first-prize boar at Illinois State Fair, 1904. A litter by Roland and one by Keep On 3d, the second-prize boar at Iowa State Fair, are extra good and afford buyers an excellent opportunity to secure something good. In uniformity of type, style and finish Messrs. McNeil Bros. have one of the good herds of the country. They have the grit and determination that are necessary to succeed in the breeding business, and are deserving of the support of breeders and farmers throughout the entire country. Correspondence relative to their herd is always promptly answered and they will be pleased to entertain visitors to inspect their herd. Write them if in need of a good spring pig, kindly mentioning The Homestead. Watch for their announcement in later issues.

A GREAT CRUICKSHANK BULL FOR SALE.

Messrs. Marston Bros., of Mason City, Iowa, are now offering for sale what is probably as rich a bred Scotch bull as there is in the world. We refer to the red four-year-old, Conqueror's Best 182910, sired by the Marr Missie bull, Imp. Conqueror, a bull of the late W. S. Marr's favorite family, the Missies, and he has a double cross of old William of Orange, the most celebrated bull ever used at Upper Mill. The dam of the bull for sale is Imp. Zoe 5th, one of Mr. Amos Cruickshank's famous Clipper (by Billy) tribe. It is a matter of Sittytton history that Mr. Cruickshank used on his own herd more bulls of the Clipper family than of any other in the herd. The pedigree expert could not with pen write a richer pedigree from a Scotch standpoint. Now, why do Messrs. Marston Bros. want to sell so great a bull? Simply because all the younger cattle in their herd are sired by this bull, and they have secured a young bull out of the champion heifer, Lovely 30th, to breed to Conqueror's Best's heifers. Here is an opportunity of a lifetime to secure such breeding at a very modest price. This firm also have for sale another four-year-old Scotch bull, also red, and three nice yearling Scotch-topped red bulls at farmers' prices. Their first annual sale of Short-horns will be held at Mason City, Iowa, December 12th. If a visit to the farm is contemplated, call on Dr. Marston, whose office is 109 1/2 South Main street, Mason City, Iowa.

TWENTY-EIGHTH ANNUAL SALE OF WALNUT HILL SHORT-HORNS.

Announcement is made of the twenty-eighth annual sale of Short-horns from the Walnut Hill herd, at Flynn Farm, near Des Moines, Iowa, on August 16th. These annual gatherings have been feasts for the Short-horn breeders of the central West. The conditions surrounding this particular sale are such as to bring forth a large gathering of breeders from every quarter. It always follows when announcement is made of a sale from Walnut Hill, that some attractions are offered. This consignment is no exception to this rule. Fifty-seven lots have been selected with due care, that the public might have an opportunity to secure some good cattle, and cattle that would be a credit to their breeder, as well as to the new herds that might receive them. The late Martin Flynn, who founded this herd and perpetuated it up to the present time, was a man of sterling ability and integrity. Every man who knew him was impressed with his honesty of purpose in every detail. His was a name and life that can with profit be followed as a safe and model pattern among Short-horn breeders generally. The writer has been familiar with Mr. Martin Flynn's Short-horn business for some twenty years, and considers himself much the better by having affiliated with so noble and grand a character as was Mr. Flynn. Something like a year ago Mr. Flynn organized or incorporated the Flynn Farm Company, taking the family into business relations with him. For this time we will reproduce the catalog announcement, which serves as preliminary introductory: "In selecting the females for this twenty-eighth annual sale event, we have kept in mind the growing demand for the early-maturing milk and beef Short-horns, and we feel confident that this sale includes more females of this type than any other previous offering from this herd. The full import of this statement is emphasized by the fact that from the earliest days of the Walnut Hill herd, its founder, Mr. Martin Flynn, has advocated the dual-purpose Short-horn and only females that at least gave sufficient milk to nourish and raise a strong, thrifty calf had a place in the herd. All females sold without calf at foot or that have not remained quiet at least three months are guaranteed breeders. If shown by service list to have been bred. With all bulls more than one year old a warranty contract will be given. All known defects, if any, will be pointed out and any questions of prospective buyers will be cheerfully answered when animal is offered, but future usefulness of animals is not guaranteed further than above stated. Should any female, shown by our service list to have been bred, fail to remain quiet four full periods from date of such service, we must be immediately notified in writing, otherwise it will be conceded by purchaser that such female is at his risk as to future usefulness. Upon the receipt of sufficient evidence that any female in this sale fails to fulfill the conditions of this announcement, and the free delivery of such animal in as good, thrifty, healthy condition as when purchased on board cars at Flynn, Iowa, on or before December 16, 1906, we will refund the purchase price, together with 6 per cent interest on same. This sale will be held under cover at the Walnut Hill Farm, which is situated on the Des Moines division of the Chicago, Milwaukee & St. Paul Railway. All trains will be met at Olive, Iowa, two miles from the farm. A special train

that will stop at the farm will leave the Union Station, Fifth and Cherry streets, Des Moines, at 8:40 o'clock on the morning of the sale. Parties from a distance attending this sale will please go to the Wellington Hotel, corner of West Fifth street and Grand avenue, where upon presentation of this catalog free entertainment will be provided and every effort made to insure the comfort of our guests. Terms—Cash, or six months' time on approved notes bearing 7 per cent interest. Those wanting credit who are not personally known to us are requested to bring bank reference. Mail or telegraphic bids may be sent to the auctioneers, Col. F. M. Woods or Col. George P. Bellows, in our care. Stock will be put on cars free of charge, but will be at purchasers' risk after bid off. We will pay freight charges on car loads, if not less than ten animals, consigned to one station. You are cordially invited to attend this sale and requested to bring this catalog with you. A lunch will be served at 12 o'clock and sale will commence at 1:30."

THE GREAT WHEAT BELT OF TEXAS.

A very neat booklet has recently been published giving some interesting facts concerning the Wichita Falls country in the great wheat belt of Texas. It is being sent out by the firm of Cobb, Bean & Stone, of Wichita Falls, Texas. It is made plain in this pamphlet just what the land has been capable of doing in the past and what it will do if properly handled. Lands are selling now at from \$15 to \$30 per acre, the terms of sale varying in different instances, though on the whole these are quite liberal. The rainfall in that locality is well distributed throughout the year, the average for sixteen years being a little over thirty inches. Winter wheat is the principal crop grown, though oats, corn, cotton, barley and rye may be profitably raised. Live stock does exceedingly well, running on the range all winter, coming out in the spring in excellent shape after wintering on grass and wheat pasture. Many farmers have become wealthy in the growing of hogs. The extensive packing plants of Fort Worth, which is only a run of five hours from Wichita Falls, make a splendid outlet for hogs and other animals. Renters and others who contemplate changing their location should apply for this pamphlet, addressing Messrs. Cobb, Bean & Stone, Wichita Falls, Texas. See advertisement on page 15.

SIMPSON CONSERVATORY OF MUSIC.

All our readers who are interested in music will be pleased to read the advertisement of the Simpson Conservatory of Music, at Indianola, Iowa, which appears on page 11. When asked about the school, Prof. F. E. Barrows, who is the director of the school, had this to say about his conservatory: "The school has grown 33 per cent during the past year; 317 music pupils during the year. I lay this growth to the fact that the school stands for a broad-minded musical culture that no other music school in the West approaches. As this is being found out it attracts to us the more sincere class of students, those who wish to do something more than merely amuse themselves by learning a few pieces or by singing a little. Our policy of sending our teachers abroad to study on regular leave of absence in turn keeps us up with the very best in methods of instruction, and pupils know that the teachers here are always up to date and progressive. No other western school requires this of its teachers or even gives them the chance. No teacher of mine teaches more than four years at a time without going abroad to study. We have a splendid orchestra—the best in the state—playing the standard overtures by Wagner, Rossini, Suppe and the symphonies by Schubert, Haydn, Mozart and Beethoven—the only orchestra I know of that attempts things of this grade. We are able to give the standard oratorios with chorus of 120 voices and play the orchestra parts ourselves—other schools and organizations send to Chicago for their orchestra. We have students' recitals nearly every week of the school year and many concerts by the leading artists of the world. We are situated in a pleasant small town where student life can be controlled better than in a city. Personal interest is taken in every student and everything possible is done to advance them in every way."

DUNCAN'S MIDSUMMER SALE OF SHORT-HORNS.

Few breeders of Short-horn cattle enjoy a wider acquaintance in America than does Mr. H. C. Duncan, of Osborn, Mo., yet there are few who are more conservative regarding their stock and few indeed who can show more good stock than can be found at Mr. Duncan's. The writer, when looking over the Short-horns Mr. Duncan has listed for his mid-summer sale, to take place at Maple Hill Farm, on Wednesday, August 15th, was more than pleased at what he saw and of the care Mr. Duncan has used in selecting as good as he owns for this sale. We now have before us a catalog of the entire offering, in which is found as much rich breeding as is often found in any sale of fifty head. The illustrations, of which there are a goodly number, are not overdrawn, as they are made from photographs. The bulls cataloged for the sale (ten in number) are a grand lot, both individually and in breeding. In addition to these, Headlight, the chief herd bull at Maple Hill, and Golden Goods, the son of Choice Goods and Golden Abbotson that Mr. Duncan purchased at the Tebo Lawn dispersion for \$1,500, are both cataloged for reference and are illustrated. Headlight will have a number of his get in the sale and Golden Goods has been used on several of the females. Among the bulls that go in the sale will be found the herd bull, Magnet, now five years old. Magnet is a Cruickshank Orange Blossom got by Pure Gold and out of Imp. Blossom by Star of Morning. No better bred Orange Blossoms are found, and as a breeding bull Magnet has proven a success, as Mr. Duncan is reserving many of his daughters. Enough of his get are included to show his value as a sire. Individually he is a great bull, weighing 2,250 pounds in breeding form. To be good enough to do service for five years in such a herd as that of Maple Hill is recommendation enough for any bull, as no disappointments in the way of herd bulls are tolerated there. The next bull in the offering is the roan, Scottish Archer got by Maple Hill's senior herd bull, Headlight, and out of Victoria of Glenwood 14th by

TOO LATE TO CLASSIFY.

SCOTCH BULLS

FOR SALE at reasonable prices, Baron Secret 258048 by Baron Secret, and a yearling bull by Baron Secret. These bulls are of unequalled breeding and show yard merit. KING B. HERD CHESTER WHITES.

70 SPRING pigs for sale, pairs not akin. B. B. Burt, Coggon, Linn Co., Iowa.

Violet Spur. Then along down the list of sires come Imp. Glitspur, Imp. Favorite, Roan Gauntlet, Pride of the Isles and Champion of England. A more richly-bred Victoria of more individual quality and Short-horn character will not soon be found. Scottish Victor was calved in February, 1905, and is a growthy fellow, thick from end to end, low down, well developed over loin and crops and shows a constitution that is great. The man hunting herd bull material will find it here. As a calf at the American Royal he was placed fourth in a ring of twenty and will, if taken out this year, make a great show. He is cataloged as Lot 5. Lot 17, Golden Headlight, should please the friends of the famous Golden Drop family, as when Mr. Duncan cataloged this bull he cataloged a show bull, a beautiful red and one that is good from end to end. He was got by Golden Headlight and out of 8th Linwood Golden Drop. No cow in the West can show more sons at the head of good herds than can 8th Linwood Golden Drop, and the lucky purchaser of Golden Headlight will have nothing to regret in the future. Lot 12, Orange Magnet, an Orange Blossom, got by Magnet, is a last November calf and one that Mr. Duncan considers one of the best calves on the farm. He is well grown and should meet with favor. Lot 18, Good Enough, will be found a desirable Cruickshank Eliza. There is not a mean bull in the entire offering and bull buyers will not be given another such opportunity to select from such a number of good ones as at Mr. Duncan's sale. In females, fully as good a lot have been cataloged as have gone through any sale of fifty head for some time. Of these more will be said next week. Mr. Duncan is mailing catalogs as fast as the inquiries are received and we urge all our readers who are interested in good Short-horns to send for one now and arrange to be with Mr. Duncan sale day. See page 22 and when writing kindly mention this paper.

EXCURSION TICKETS TO MILWAUKEE, - WIS.,

First Annual Offering

Short-horn Cattle

At Burwood Stock Farm,
Milwaukee, Wis.,**TUESDAY, AUGUST 7TH.****45 HEAD. 39 FEMALES, 6 BULLS. 45.**

Nearly one-half of the offering will be straight Scotch of the most popular strains, and the balance representatives of the best American sorts, topped out by bulls of the choicest Scotch breeding. EVERY FEMALE OF BREEDING AGE WILL EITHER HAVE A CALF AT FOOT OR BE SAFE IN CALF TO NOTED SCOTCH BULLS. I have selected for this offering as good as my herd affords, and feel confident that I will present a draft of cattle that will satisfy the most critical buyer.

Every Animal Absolutely Guaranteed a Breeder.

The sale will be held at BURWOOD STOCK FARM, which is easy of access by street car from Milwaukee. Take MUSKEGO LAKES CAR from Chicago, Milwaukee & St. Paul depot to ST. MARTINS, where conveyances to the farm will be in waiting. I extend a cordial invitation to Short-horn men generally to come and spend a day with me at Burwood Farm whether you buy or not.

Catalogs giving full particulars will be sent upon application. Mention this paper and address,

Dispersion Sale of Celebrated Champion

Baby Beef Herd Aberdeen Angus Cattle at Stock Yards Pavilion,
Galesburg, Ill., Tuesday, August 14th

Fifty head of celebrities are cataloged, including the champions and their sires, dams, brothers and sisters, and all are strong in the blood of the renowned Nosegay, the most popular champion Angus bull that was ever exhibited in American show yards. More high-class bulls are cataloged than were ever seen in one sale in this country and include Rosegay 2d 75856, Rose's Earl 63086, Vala's Rosegay 63745, Key 72172, Intensified 93993, Echo Ito 83734, Equalizer 83737, Envoy 3d 93990 and Evener 93998, several of which have defeated the best bulls of the day, and from which, I believe, can be selected all the great first-prize winners and champions of 1906. Eleven Trojan Ericas, several of which are imported and all of the best individuality and most fashionable blood lines will be auctioned. The Ball-indaloch K. Pride cow, Key of Chicago, that I consider the greatest cow of the breed today, will be sold with her prize-winning son and daughters, and there are also included other superior Prides. Every family in the herd has produced prize winners and champions, and each and every animal goes without reserve on this occasion. For catalog of this great dispersion sale address, mentioning this paper,

C. H. GARDNER, BLANDINSVILLE, ILL.

Surber	Pride of the Isles 35072	A. Cruickshank
Surber	Champion of England 17526	A. Cruickshank
Surber	The Czar 20947	A. Cruickshank
Surber	Lord Sackville 13249	A. Cruickshank

This Cow and seven of her Descendants go in the Sale.

The offering comprises forty cows and heifers and eight bulls, including the herd bull, O. C. 179769, by Maxwell 121984, a Cruickshank Duchess of Gloster, sired by Blue Valley Duke 2884809. O. C. possesses the intensified blood of Double Gloster 55406. The cattle are a good, useful lot, from the old established herd started at Walnut Ridge Farm, by the late Jerre Turpin, over thirty years ago. They are sired by such bulls as Imp. Master of the Mint 99462, Grand Victor 115752, Orange Baronet 120377, Lavender Duke 177277, Percy Waterloo 116708, Bick's Barrington 110970, etc., and embrace such families as Imp. Simplicity, Rose of Sharons, Desdemonas, Adelaides, Princesses and Duchess of Sutherlands. They are heavy milkers and beef producers.

A cordial invitation extended to all lovers of good Short-horns and horses. Horses sell at 10:00 a. m.; cattle sell at 1:00 p. m.

DUROC JERSEY HOGS.

Dispersion of the Famous Gold Dust Herd of Durocs.

HAVING decided to close out my Gold Dust herd of prize winning Duroc Jerseys, I now offer to the public, at private treaty, my entire crop of spring boars. They are sired by Tip Top Notcher, grand champion at World's Fair, acknowledged by most competent judges to be the best Duroc boar in America; Ohio Chief II, one of the best sons of Ohio Chief; Champion Paul, a son of the noted Oom Paul; and Fancy Orion, an exceptionally good son of the World's Fair winner, Orion Chief. I am keeping my sows and spring gilts for closing out sale on October 24, although I have received tempting offers for them at private treaty. I am keeping nothing back and my entire herd will be disposed of at private and public sale. Write for prices and descriptions at once if you want a herd boar from Gold Dust herd. Address, **GEO. W. SECKMAN, RIPLEY, ILLINOIS.**

CLOVER-WAVE DUROC JERSEYS.

Sires in service, Red Orion 28793, by Orion 5393; dam Rose Bud 50186 by Jumbo Red 7973, a half brother to Ohio Chief. Belle's King II 4113, by Belle's King, a son of Echo King and Nebraska Belle. Dam of Belle's King II is Lon Dillon 109830 by Orion, dam Cherry Blossom II 50574 by Dandellion 12165. Duroc Standard 41117 by Duroc Paragon 29181, by King Perfection 16235; dam Paulina Queen II 86492, by Duroc Challengeur 11163. We have 110 pigs mostly of March and April farrow, sired by these boars and others, and from as good a lot of sows as can be found in any herd. We are better prepared than ever before to furnish choice breeding stock. Visitors welcome at all times. **STOW & GINGRICH, HAMBURG, IOWA.**

Notable Nebraska Short-horn Sales of Scotch and Scotch Topped Show and Breeding Cattle.

At Geneva, Nebraska, on Tuesday, August 7th,
I will sell fifty head of by far the most superior Short-horns that have ever been included in one of my auctions. They consist of fifteen bulls and thirty-five cows and heifers, twelve of which are Scotch. Two good show herds are cataloged, and included is the grand breeding bull, Bapton Gloster 213104, and eleven of his get of grand show yard character. The tops of the herds of I. W. Baughman, Edinburg, Ill., and C. H. Giller, White Hall, Ill., I was fortunate in securing. I have inspected the animals for this auction and they are absolutely good. They are also exceedingly highly bred, the most famous sires and families being represented and I would be pleased to mail catalog to all admirers of the Short-horn.

At Grand Island, Nebraska, on Saturday, August 11th.
Some fifty head of good, useful Short-horns will be auctioned. The bulls will number some seventeen head and are from eighteen to twenty-eight months old; good, strong ones, with scale and substance. The females include a few Scotch cattle, but they are mostly Scotch topped.
Edward N. Hurley, Wheaton, Ill., is dispersing his herd and includes sixteen of his best cattle on this occasion. His herd bull, Diamond Jim, a son of the noted Imp. Bapton Diamond, is cataloged.
Other consignors are Riley & Caswell, Albion, Neb.; F. C. McCutcheon, Holstein, Iowa; B. B. Dean, Glenwood, Iowa.

For Catalog of both Auctions and other Information, address,
W. C. McGAVOCK, - - - SPRINGFIELD, ILLINOIS.
COL. T. C. CALLAHAN AND OTHERS, AUCTIONEERS.

SHORT-HORN CATTLE

Twenty-eighth Annual Sale Event

AT THE

WALNUT HILL BREEDING FARM

Thursday, August 16, 1906

Fifty head of females are listed from the most popular families of pure Scotch and pure Bates represented at Walnut Hill. Ten very choice young bulls, including herd headers of absolutely high individual merit, from both Bates and Scotch strains. In this offering is listed a very large proportion of early maturing, milk and beef Short-horns in the Scotch and Bates bred lines and it will without doubt be an event which must attract the more thoughtful Short-horn breeders.

The sale will be held at Walnut Hill Farm, where every possible comfort will be provided for our guests on sale day. Parties from a distance will be provided with free entertainment at the Wellington Hotel in Des Moines.

Catalogs containing all the pedigrees of the cattle to be sold, together with full information concerning the sale will be mailed to applicants.

REGISTERED HEREFORDS.

RICH in blood from the best families of the breed. Twenty bulls and a number of heifers for sale. True individuals. Prices low. Inquire of A. Sewell & Son, Waverly, Iowa. H. H. Sewell, Manager.

BULLS FOR SALE! BULLS REGISTERED HEREFORDS! B. F. CLARK, ALBIA, IOWA.

HEREFORDS

10 BULLS, 25 cows and heifers at bargain prices to quick purchasers.

Edmonds, Shade & Co., Kingsley, Iowa.

Breezy Park Herefords

Young bulls of serviceable age, from 15 to 30 months, sired by Lord Southington, son of Southington (Imp.). Write me.

H. C. CUNNINGHAM, WESTON, MO.

ABERDEEN ANGUS CATTLE.

PLEASANT GROVE STOCK FARM

THE HOME of 200 Aberdeen Angus cattle. Herd now headed by Imp. Pride of Aberlour 41201 Nugget of Cottage Grove 2d 19066, Lowlander 21880 and Newton Hero 46150. 40 choice bulls and some cows now for sale. This is an excellent opportunity for farmers to supply themselves with a first-class bull from 1 to 2 years old. Write or come and see us. Free transportation furnished from Palmer's Livery to farm. Address, Dunning, Johnson & Allen, Greene, Iowa. On C. R. 1 & P. Ry.

10 Angus Bulls 10

For Sale

10 to 20 Months Old. All Good Ones.

ERICAS, ZARAS, QUEEN MOTHERS, GREYSTONE PRIDES and other females by such sires as BLACK JAM 3D 30709, IMP. ABERLOUR 41201, BELL'S ECLIPSE 3D 57424, QUOQUE 49102, LEON ARTIST 33619.

H. H. Trimble Herd, Bloomfield, Iowa.

Address all communications to O. D. WRAY, Bloomfield, Iowa.

Seeley Doddies

BLACKBIRD 1to the first prize yearling bull at the World's Fair heads the herd, composed of the best families of the breed. We invite you to see them on Sprigdale Stock Farm joining this city.

W. B. SEELEY, Mount Pleasant, Iowa.

THE WHEATLEY & WARD ...HERD...

OF Aberdeen Angus. 175 head in herd—Herd bulls, Maple Hurst Proteros 47351, Hale Lad 2d and Gardner's Pearl Rosegray 52637. Females represent Queen Mothers, Prides, Heather Bells, Ericas, Easter Tullochs, etc. 16 bulls for sale ranging in age from 10 to 24 months. The herd heading sort. Inspection of herd invited. Address,

WHEATLEY & WARD, King City, Missouri.

BERKSHIRE HOGS.

BERKSHIRE SOWS FOR SALE

I HAVE 12 sows bred for fall litter, ranging in age from 10 months to 3 years for sale. Write me quick.

JOHN C. MILLER, - Harlan, Iowa

CORN HARVESTER cuts and throws in

pile on harvester or windrows. Men and horses cuts equal to a corn binder. Price \$14. Circulars free showing Harvester at work.

New Process Mfg. Co., Lincoln, Kan.

WANTED: Registered cattle, stallions and jacks in exchange for Illinois, Iowa, Missouri, Kansas, Nebraska, Minnesota or Wisconsin farm. Box 161, Independence, Iowa.

IOWA ABERDEEN ANGUS CATTLE.

IF Iowa farmers want Iowa grown Aberdeen Angus bulls, 12 months old, we have them at farmers' prices. Ten good ones, Pride, Queen Mother, Favorite, etc. Our herd bull, Proud Blackcap 39946, a Blackbird topped Pride, 6 years old, cannot use him any longer. Will sell some choice cows and heifers cheap. Twenty years breeders of Doddies.

ALLEN BROS., NEW SHARON, IOWA.

FOR SALE

ABERDEEN Angus cattle of all ages at farmers' prices. Rosegray Lad 70259 at head of herd. Can ship over three roads. Address,

JAMES SPRAR, STANWOOD, IOWA.

10 Aberdeen Angus Bulls For Sale 10

12 to 14 months old. WILL sell at farmers' prices. \$100 gets a good bull. Prides, Queen Mothers, Heather Blooms, Rotherie Queens, etc. Address,

JOHN E. GRIFFITH, WASHINGTON, IA.

(Mention Homestead.)

ROSENGIFT ABERDEEN ANGUS.

BRED cows all sold that we care to spare; a number of growthy, thick bulls at very reasonable prices. Herd now headed by Blackene and Kellor Victor 3d.

Rosenfeld & Siverly, Kelley, Story Co., Iowa.

12 Head Aberdeen Angus Bulls For Sale

OF the Blackbird, K. Pride, Trojan Erica and Queen Mother families ready for service. Will be priced right. Herd headed by Prince of Pilsen 59249, weighing 2020 lbs. and as active as a cat, sired by Craewood Black Knight 39477, sold at the Miller sale for \$2,000. Address, WHITE BROS., PERRY, IOWA.

Pleasant Hill Herd of Aberdeen Angus.

STOCK for sale of both sexes, sired by the great Pride bull, Baltimore of Glendale 24275.

J. Nissen, Meservey, Cerro Gordo County, Iowa.

WANTED REGISTERED CATTLE

WILL accept \$3,000 worth of registered Hereford or Angus cattle on good quarter, prairie land, edge of Red River Valley, twenty miles N. E. of Crookston, Minn. Price of land \$25 per acre, and worth it. Address,

Jesse Gouge, Waterloo, Iowa

AGENTS wanted. Send 25 cents for sample

by prepaid express.

Kilchertite Blue Soap Co., Lake City, Iowa.

When writing please mention this paper.

RED POLLED CATTLE.

Joseph Kestel, John Schrotberger.

Red Polled Cattle

EITHER sex for sale. Have show stock, Duroc Jersey swine. Equal to the best. Kestel & Schrotberger, New Lenox, Ill., or Gardner, Ill.

RED POLLED CATTLE.

80 HEAD in herd, Irwin 8253, an International prize winner in 1903 and 1st and sweepstakes at Iowa and Neb. state fairs in 1904, is at head of herd. Choice bred bulls, also some heifers and cows for sale at zero prices. Come and see or write, G. W. Coleman, Webster City, Iowa. Route No. 8. Phone 1208.

RED POLLED BULLS AT BARGAIN PRICES

4 CHOICE yearling bulls by Chicago Boy 11343, at \$400 each, and Chicago Boy at \$200. C. M. & S. P. and Rock Island Rys. Address, G. W. Sharp, Marble Rock, Iowa.

LARGE YORKSHIRE HOGS.

Large Improved English Yorkshire Swine.

F. Rabaler, Prop., Leigh, Neb.

I HAVE the best imported and home-bred Yorkshires in America. Have made 5 importations. Oak Lodge Minstrel 8th 1855 and O. L. Fusiller 6443, two imported boars and Hannover Emperor 7038 at head of herd. Stock for sale at all times. Can furnish stock not akin. Now booking orders. Write us at once.

Large Yorkshires

WORLD'S FAIR CHAMPIONS. We have 707 pure bred pigs, farrowed this spring of the most uniform quality we have ever bred. Can furnish pigs not akin to stock sold in previous years. We have the numbers and quality, try us for prices. Ad., Thomas H. Canfield, Lake Park, Minn.

POLLED DURHAM CATTLE.

DOUBLE STANDARD Polled Durham Short-Horns

HERD headed by Secret Knight, he by the \$1,000 Idle Knight X1374-159582. A few young bulls and heifers of this famous Polled breed for sale at reasonable prices. Farm five miles from Iowa. We won fifty prizes at the Iowa, Nebraska and Kansas State Fairs this fall, including twenty-one firsts and ten sweepstakes.

L. G. SHAVER, - KALONA, IOWA.

D. S. Polled Durham Bulls.

FOR SALE—4 dark-red blocky yearlings, at \$75 to \$100. One two-year-old herd bull, \$150. Cows and heifers bred or calves by side. Short-horn bulls 17 months old, \$75 to \$85. 2 miles northeast of city.

P. S. & S. Barr, Box H., Davenport, Iowa.

DES MOINES, IOWA, AUGUST 2, 1906.

WHOLE NO. 2559.

SUPPLYING HOGS WITH MINERAL MATTER.

Live stock of every description is kept under more or less artificial conditions in the corn belt. Complaint is frequently heard regarding the increasing lack of stamina in live stock, and notably young hogs. Those who offer suggestions along corrective lines advise the freer use of bulky foods in the ration. It is claimed that the average breeding hog consumes too much grain and not enough pasture. On the other hand, early maturity is sought and certainly the animal fitted for market early in life brings to the owner the most profit. How then are we to keep the stamina up and at the same time force animals along by the somewhat free use of grain?

Corn is the foundation of all grain rations in the central West, and other foods may be regarded as being supplementary only to the great golden cereal. Unfortunately, corn contains a comparatively small percentage of bone-making material. About one and one-half pounds of ash is present in every hundredweight. In the case of oats there is practically twice this amount of ash.

Oil meal contains between three and four times as much ash as corn. It is not, therefore, surprising that a considerable percentage of hogs that are fed heavily on corn are troubled with rickets, thumps, etc. Although corn is lacking in flesh-forming constituents and does not in itself make a balanced ration, yet it is our opinion that the low percentage of bone-making material is the cause of certain ailments in hogs. Ash of course is used not only in making bone, but is employed in the circulatory system, being used in the building up of muscular and fatty tissue, as well as bone. In view of what has been said above, we believe that the average farmer who feeds corn heavily should make some provision for supplying ash. This can be done in a number of ways. In the case of young pigs that are being fed slop daily, it is an excellent plan to place some lime in a barrel, having this located near the feeding quarters. If, for example, fifteen or twenty pounds of lime are put in a fifty-gallon barrel and to this is added

ed twenty or thirty gallons of water, it requires but little labor to transfer a pail of this lime water at each feeding time into the slop barrel and in turn replenish the lime barrel with another pail of water. Whether it is the amount of lime that is supplied the system or the favorable effect of the lime water on digestion, we are unable to say; but from considerable experience we strongly recommend the practice.

A little copper sulphate may also be kept on hand in solution and two or three times a week a small quantity placed in the slop. Of course copper sulphate is exceedingly bitter and one will very soon learn that a small quantity only must be used, otherwise hogs will not eat their feed when this is present. The copper sulphate tends to destroy worms, and it is our private impression that some of the salts are taken into the system with good results.

Charcoal is very commonly advocated by swine breeders. This is ordinarily made from the burning of cobs, the burning being done in a covered pit. Where one has the pit and a metal cover this plan is to be highly commended. However, an excellent plan is to simply place

cobs in piles four or five feet deep and set fire to them. Just when they have reached the point where the whole pile is in a red heat, dash on plenty of water. If copper sulphate and common salt are dissolved in the water first, you then have an ideal charcoal and ash mixture for hogs. It is surprising how eagerly it will be consumed, and there is no doubt but what it satisfies some real requirement in the animal's system.

These things may take a little time, and there are those who are able to raise hogs from year to year without the use of anything but pasture and grain. On the other hand, there are hundreds and thousands of men in the corn belt who have trouble every year with their pigs. They grow slowly, if at all, during the summer months, and take on an unthrifty appearance generally. To these the above suggestions are given and we believe if they are carried out that many of our readers will be able to save an immense amount of feed.

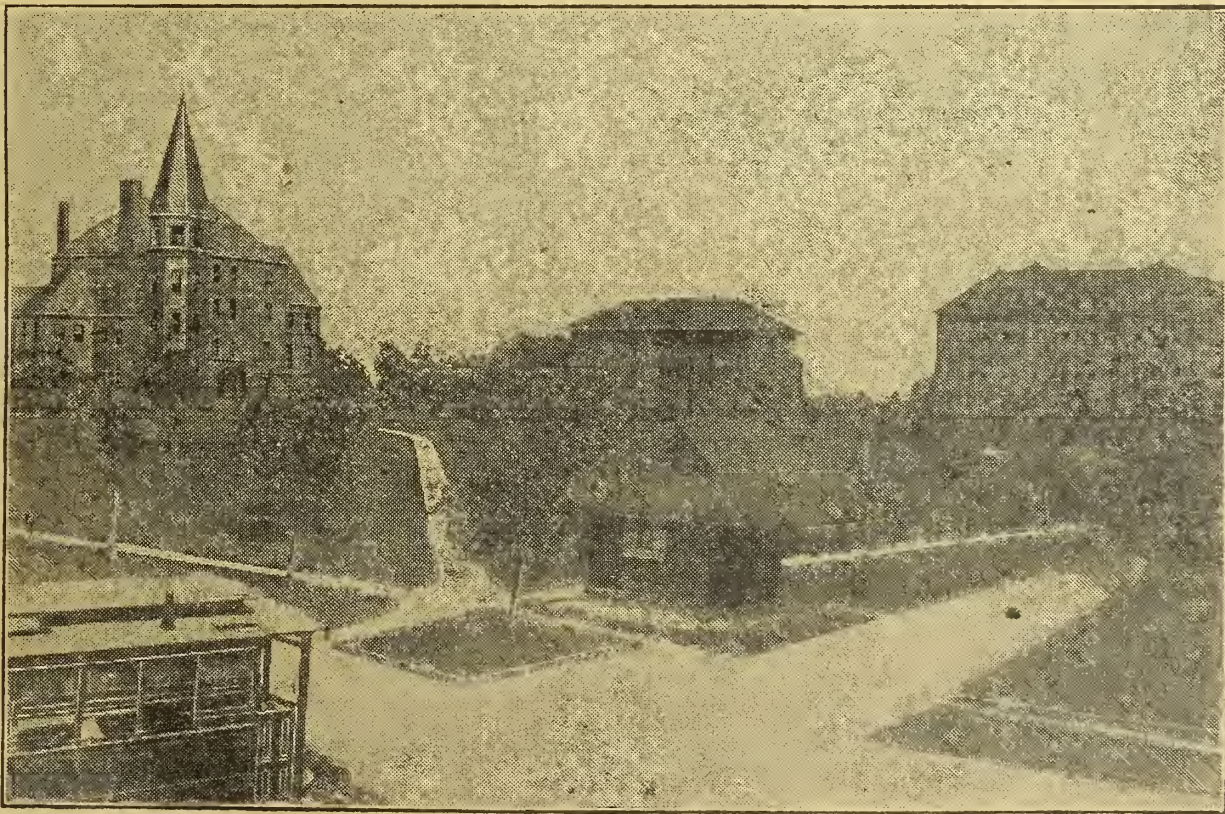

THE LOSS OF NITROGEN FROM SOILS.

The Minnesota Experiment Station has given a good deal of attention to the investigation of soil fertility problems,

notably that pertaining to the loss of nitrogen that results from certain systems of cropping. In Kittson county an analysis of the soil was made ten years ago, at which time it was found to contain .60 per cent of nitrogen. This crop was grain farmed during the next ten years, wheat being the main crop produced. As the result of this cropping the per cent of nitrogen amounted to but .52 per cent. The difference between these percentages amounted to 2,000 pounds per acre. The crops produced during this ten-year period removed from the soil only 250 pounds. The large loss of nitrogen, apart from what was removed by crops, was due to rapid decay of humus, of which nitrogen forms a part, and also loss of soluble nitrogen in drainage waters.

In another county where manure was added once during the ten-year period the loss only amounted to 1,000 pounds per acre, of which one-third of this amount was removed in the crop.

When wheat, oats, corn and barley were produced and the land given a dressing of farm-yard manure, but no clover or grass crop grown, the loss of nitrogen was in one instance 1,200 pounds. It will be noted that even where mixed grains are grown and manure occasionally added there is still a heavy loss of the most valuable element of fertility if no grass crops are grown. In contrast to the records given above, is the one from Dakota county where wheat, oats, corn and clover were grown. In ten years the land was manured once and only a small amount of grain was sold from the farm. After ten years of this kind of farming the nitrogen content was practically the same as at the beginning. The rotation in this instance was wheat seeded to clover; one year to meadow; then follows corn to which manure was applied; then two grain crops following the corn. The fact that there was practically no loss of nitrogen was traced to the effect of clover in taking nitrogen from the atmosphere and storing it in the soil. While there is not a farmer in the central West that does not realize that clover is a most valuable crop when considered from the standpoint of maintaining fertility, yet

HIGHLAND PARK COLLEGE, DES MOINES, IOWA.

Highland Park College, Des Moines, Iowa, is one of the largest and best equipped colleges in the West. The attendance in all departments is very large, the enrolment the present year reaching 2,143 students. The above illustration will give some idea of the college and gives an exact picture of the main college buildings. There are nine buildings in all—six large brick buildings and three large frame cottages. The attendance is by no means local, there being students in attendance from at least three-fourths of the states of the Union. The college work at Highland Park College is equal to that of any other college in the West. The Normal work is equal to that offered by any of the state Normal schools. Besides, there is a primary training course that is not excelled in any of the Normal schools of the country. The college of engineering is one of the most thoroughly-equipped colleges of engineering in the country. A specialty is made of practical work. The shops are thoroughly equipped and students receive shop work from the beginning. There are courses in steam engineering, electrical engineering, civil engineering, mechanical engineering, traction engineering, gas engineering, and telephone and telegraph engineering. The school also maintains the largest and best-equipped college of pharmacy in the country. The college of music at Highland Park College is in all probability the best-equipped college of music west of Chicago. There are eleven first-class musicians employed as teachers in this one department. The college of shorthand and typewriting and the business college are known throughout the West as the most complete schools of this kind to be found in the country. The expenses are very reasonable indeed and the accommodations the very best. There is probably no more scholarly faculty to be found in connection with any college in the West. We are glad to present this illustration of Highland Park College to the readers of this paper. We recommend it to their consideration, believing that all who attend it will find it one of the best-equipped and best-organized schools in the West.

it is doubtful if many appreciate the fact that a clover crop grown once in five years on a soil, together with the return of manure once in ten years, will practically maintain

the fertility supply in a soil. Indeed, in the instance given, the productiveness of the soil on which clover was grown twice in ten years was actually increased.

STACKING GRAIN.

When we consider the amount of grain unnecessarily damaged in the stack we can readily see that the subject of stacking grain is one well worthy of consideration. The secret in stacking grain to keep is to build the stack so that it will stand erect, with the bundles slanting downward from the center and in shape very similar to that of an egg (that is, inclined to be pointed) with the small end up.

To guard against having damaged bundles at the bottom of the stack it is well to place a little straw or some rails or to plow the ground where the stacks are to stand. Where a little straw is used it will stick to the ground and the bundles will peel off nicely and be free from dirt or rotten straw. As the plowing leaves the ground with the capillary tubes broken the moisture will not be carried upward so readily as it otherwise would.

In starting a stack begin as in making a round shock gradually allowing the bundles to become flatter so that by the time the desired size of bottom is reached the outside row of bundles will be flat enough so that bundles can be laid on top of them. From here up to where the bulge is to be started keep the outside of the stack perpendicular with the bundles well tramped to the outside. This will aid materially in keeping the stack standing erect.

The height at which to place the bulge depends upon the condition of the bundles and style of bulge, but should be at a point so that when the stack has become settled it will hang well to the ground, but not touch. While the bulge is being built the bundles in the outside row cannot well be as steep as they can afterwards, as there would be danger of their sliding off, but they should be laid in such a way that when the stack has become settled they will be steep. To do this lay the outside row of bundles and the one next to it at the same round, the staker using a fork and keeping as well toward the center as is convenient and laying the butts of bundles in the second row only well over on the heads of the bundles in the outside row. This helps to prevent the outside from becoming too steep to lay bundles on. Work the bulge outward to a distance not less than the length of an ordinary bundle, then keep the outside of the stack nearly perpendicular for a few feet after which draw in very gradually until the stack is back to about twelve feet across at the top, during which time continue laying the outside row and the one next to it at the same round, being sure to have the heads of all the bundles higher than the butts or about one-third pitch. To do this, extra layers of bundles will have to be added occasionally to keep the middle full.

When adding these extra layers do not begin at the outside of where you want them, as the heads would be liable to pitch toward center, but begin at center laying outward only so far as you have the desired pitch, and if still too flat to keep the heads of the next regular layer well up, repeat the process. Always do enough of this filling up in the middle to keep a stack as steep as is convenient to stack on.

When the stack has become narrowed in to about twelve feet in diameter at top it seems well to drop the laying of the two outer rows of bundles at the same round, as they reach too near the center, and do not admit of room for adding extra layers to keep the desired pitch, which is at an angle of about forty-five degrees from here up. With this pitch and in order to draw in faster the nearer the top we get so as to produce the oval or egg shape, we are allowed to lay the butts of the bundles in an outside row only well down over the heads of the bundles in the previous outside row. Where not otherwise mentioned lay butts about down to the bands. When the holding of the top of a stack to the oval shape brings it to a center lay a cap bundle on top and the stack is ready for the hangers. Existing conditions should de-

termine the shape and also the size of the stack.

The slower a stack is drawn in the better it will shed water, but there is a limit to the height to which it is convenient to pitch, and the more slender the top the more danger there is of the stack leaning over. The nearer the outer edge of the roof the more water there is to be carried, and it is the same with a stack. From these facts one might conclude that the proper slant for drawing in would be inversely to the flow of water on a roof; that is, but little at the lower edge and gradually increasing as the top is neared.

Very large stacks are cumbersome to handle and very small ones cause a waste of time in moving and setting a machine. We consider the proper size of stack to build is one as large as is convenient to pitch to or containing about nine or ten loads. The advisability of stacking or thrashing from shock, of course depends upon the conditions. Where a thrashing machine can be had just when wanted and if the weather could be depended upon and where the straw is not needed, there would be a saving of perhaps from twenty-five to forty cents per acre by thrashing from the shock. The straw blower is usually needed and by stacking and thrashing later in the season when the grain has become well cured, the straw will be of much better quality, as it escapes a share of the fall rains. The grain also is usually of better quality, keeping better when stored and bringing a better price. By stacking, many of the expensive hinderances are avoided which are liable to occur in shock thrashing. The weather is liable to delay shock thrashing until the damage to the grain exceeds the extra expense incurred by stacking.

All things considered we prefer stacking, using basket racks and beginning as soon as the grain is in proper condition and keeping steadily at it whenever it is fit, and the stacking will not last as long as one might think. C. W. Hale. Olmsted county, Minn.

We stack our grains chiefly to protect them as much as possible from the ravages of the elements, until such time or opportunity arrives that we can thrash. It behooves us therefore to put up good stacks—stacks that will both shed water and stand high winds.

If we remember our stacking when we cut the grain we can do something towards making it an easier job, by making bundles that will build the best stack. Of course if grain is down or badly tangled, we are glad to get it into a bundle of almost any size or shape. Of standing grain that we can handle as we see fit we want good sized bundles tied, and firmly enough so they will retain their shape until they go into the stack. The twine band should be only a little below the middle of the bundle. If placed lower, the butt end becomes too small and will not fill out its place in the stack, and at the same time the top becomes spreading and loose and makes the bundle hard to handle.

In starting a stack, lay two bundles in a cross where you want the center of your stack, then shock bundles around these until the desired sized bottom is reached. In making this bottom, lay the bundles more than standing them. If each course overlaps the preceding one enough to amply protect the grain heads from the ground, it is enough. Some stand the bundles in the center and then gradually draw them out so as to have them lay flat by the time the outside is reached. The objection to this is that the center bundles standing up will be more or less crushed by the weight of the stack, and as a result the center is apt to settle more, in proportion, than the outside.

Now when you have your proper sized foundation you reverse the process and lay a course of bundles even with the outside first. Then if the center becomes dish-shaped, fill up by throwing in bundles promiscuously. Lay the second course only enough over the tops of the first one to bind same well, but let the re-

maining inner course lap over the preceding one about out to the twine band. This should give a very full center on which the bundles and succeeding layers or courses should slant slightly outward.

Some stackers pay very little attention to how the center of the stack is kept until the bulge is reached or when they commence to draw in. Although the balance of the stack may be so built that it will effectually shed water even if the lower part is built flat, or even dish-shaped, it is nevertheless a better practice to start right and then keep on right, than to change style of stacking in the middle of a stack. An advantage of no small importance in stacking with a full center, so that all bundles lap gently outward from the bottom to top of stack, is found in seasons of rain. A stack properly built should withstand a considerable shower of rain even if left unprotected at any stage of completion. The writer has frequently had stacks open during heavy rains and has rarely had to move more than the upper course for drying.

Build the stack as nearly perpendicular as possible for at least five feet up, and while building this portion of the stack do not be afraid to get on the inner courses as well as the outer ones and work them down so as to get a solid foundation when it comes to making a bulge on the stack. The size of the bulge is greatly governed by the condition and kind of grain as well as by the skill of the staker. The object of the bulge is to make eaves on the stack, so as to run the water off, in place of running it all the way to the ground on the grain. The bulge also assists in getting a better shape to the stack, in that the bulge part of the stack extending out over the base portion gets a better chance to settle down, and thus the outer course all the way up settles more than the inner portion and hence becomes steeper and sheds water more effectively. Make the bulge gradually; that is, don't try to put any one course away out over the preceding one, but little by little for from four to six courses. Then work back as gradually. This will give considerable weight over the bulge and the stack should settle well. Never draw a stack quickly from the start, but rather on finishing out so as to get a blunt and stiff top. A stack that is drawn gradually from the beginning and harder near the top will also contain much more grain, as it will have the bulge sides all the way up instead of a straight-sided cone. While the stack is being drawn, pack the bundles closely so as not to leave any large opening for wind to get at or for rain to drive in.

We are presuming that everybody now uses the fork to stack with in place of kneading and elbowing the grain together. We mention this because we wanted to say that in drawing a stack the staker can see over the edge of the stack, if the center is kept well filled, without going near the outside. This is a great help in making a symmetrical stack. Do not try to draw a stack fast if the bundles are short, for then too much grain is liable to be exposed, even if the staker as a whole is good.

In topping out a stack it is neither necessary nor practical to set up a cap bundle. Instead, lay all bundles and secure by putting in three or four slender stakes or sharpened laths. Cut notches near the upper end from down up and let these engage the twine on the upper bundles and they will be held very firmly. Should a stack commence to lean over to one side, either during the building of it or soon after, braces may be put against it on the side towards which it leans. Several bundles should then be drawn out on the opposite side and from below the bulge, for about one-third of the circumference to make the stack settle back or at least settle the side of the stack that has been drawn in when the stack went over so it will shed water better. Build good sized stacks. By this we mean stacks containing at least seven loads or more, as the exposed area on a large stack is not much larger than on a small one.

Brown Co., Minn. Carl Olstad.

The kind of stack which is usually built in this vicinity and which in my judgment is the best, is the round or cone-shaped stack. To build this stack I set a shock where I wish to have the center of the stack and keep setting bundles around this shock until the desired size is reached, when I begin on the outside and lay a row on the outside of the butt high enough up so that it will not

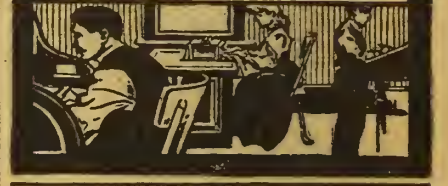

From Drudgery to Positions of Dignity

Many young men are drudging their lives out at hard manual labor who could qualify for positions of dignity and good salary if they would only investigate the opportunities a good business education affords.

YOUNG MEN WANTED

The demand is far in excess of the supply of the right men—men who have the right business training such as we give every student who enrolls with the Gem City Business College. We don't qualify you by teaching you to memorize text books—we qualify you by giving you actual, practical business experience—transacting business just as it is done in regular commercial life. Our college is simply a big instructive mercantile establishment, where you learn by doing. That's why our students are sought by leading business houses. They are ready for business—fully qualified. We teach all commercial branches—

Bookkeeping, Banking, Shorthand, Rapid Calculations, penmanship, etc. Write today for our free 64-page illustrated catalog and terms. Now is the time to enroll. Good home boarding places—reasonable rates. GEM CITY BUSINESS COLLEGE. D. L. Musselman, Pres. 205 Musselman Bldg. Quincy, Illinois.

touch the ground. This row I lay by hand and get down on it with my knees so as to press the bundles firmly in their place. With the exception of this one row all the rest of the stack I build with the fork. When this row is completed I again begin on the outside and lay one row right straight on top of this and a second row about as far out as the band. When these two rings are completed the center will be dish-shaped. This can be filled with bundles laid in any way to fill up, just so they fit good and leave a level, smooth center. I keep on in this way until the stack is four or five feet high. The outside of the stack must be kept perpendicular up to this height.

I bulge my stack now by laying a row of bundles over the edge about six, eight or ten inches, depending upon the length and stiffness of the straw. The second row is laid about two-thirds on top of this outside row so as to keep it firmly in place. Only ridged, good-shaped and well-bound bundles should be used for these two rows, especially the outside one. The third row of this tier should be laid so far upon the second that when the next outside row is laid it will rest upon the butt of these three rows. When these two tiers are completed the center should be pretty high so as to give slope to the outside bundles and make them shed water.

I now begin to draw my stack gradually at first and more with each succeeding tier so as to give the stack an oval outline. When the stack is completed, or to complete the stack, rather, I choose a large flat bundle and shape it by bending it over my knee so as to fit and cover the remaining last two bundles. This I call a cap and is held in place with a lath that is notched on one end and stuck in the stack so as to pin down the cap. I also pin down in like manner all bundles that are not held in place very well by those above them.

In stacking the following points should be borne in mind: First, always lay all, and especially the outside bundles, close together; second, the butt being the foundation of the stack should be well built, otherwise the stack will settle out of shape; third, don't draw the top of the stack too long for that will cause it to become soaked in settling; fourth, the outside rows are exposed to the rain and wind and therefore there should be good bundles with large butts in these rows; fifth, raking off the sides of the stack when it is completed draws the straws straight and down and removes all grass that is in the butts of the bundles and thus the stack will shed water better.

Watsonwan Co., Minn. Otto Uhlhorn.

Farm Furrows

Turned by a Practical Farmer.

The hoe and the scythe should be in the best of condition this month.

Very frequently while haying is on, the weather is very much off.

I like to grow roses, but I very much dislike to fight the enemies of the rose bushes.

So long as some men are born shrewd and others silly there will be gold brick schemes.

A dry time is not a good time to locate tile drains, but it is a good time to dig them.

The man who can convince a moonologist that he is wrong has a hard job on his hands.

I am led to believe that many farmers do not come up to their possibilities in the making of a garden.

Sometimes little leaks lead to large ones, which eventually turn profit into loss. It is the successful man who looks after the leaks.

Bogus meats are not modern. I remember of reading a book where David, the psalmist, said: "They gave me also gall for my meat."

Some men will not take a minute of time to replace a tool, but they will take an hour's time in hunting one that has been misplaced. Is this economy?

Some people get the hay fever twice. They get the fever to make hay at one season and later they get the real hay fever and go about sneezing. I would much rather have the first kind of hay fever.

When a cow is seen to be persistently gazing through a fence at the growing green corn, it is very evident that she is looking for a weak place in the fence, which may cause trouble for her owner.

An airship will be one of the attractions at the Iowa State Fair this year, the last week in August. This will be a sight worth going many miles to see. Railroads will sell tickets at one fare for round trip.

I have read enough literature about keeping the boys on the farm to form a big book. I have lived long enough to know that the solution of keeping some boys on the farm is in keeping the daughters of some other farmer on the farm.

If one farmer raises forty bushels of corn per acre and another raises eighty, what chance has the forty-bushel farmer of competing with the eighty-bushel farmer? It is barely possible that the eighty-bushel farmer is the forty-acre farmer.

Stubble fields are not pastured as much in the West where fencing is expensive as they should be. There are always many weeds that will be well to have exterminated in the stubble. Pasturing is the best way to get rid of many of them.

At church we observe the "end seat hog," in passenger cars we see the "double seat hog," and wherever we go we see hogs of various kinds. It requires no stretch of imagination at this time to see the seven-dollar hog in the market. This is the hog that suits the farmer.

Those of our readers who are going to the Iowa State Fair should open correspondence with the Commercial League, Des Moines, at once and arrange for a place to stay while attending the fair. There are many good homes which will be opened to fair visitors at reasonable prices. State what kind of place desired and about what you wish to pay. Don't

expect a good place too cheap. If this matter is attended to before the fair at an expense of two or three postage stamps, it will save valuable time when you get to Des Moines.

How often we hear men saying that if their "foresight" had only been as good as their "hindsight," they could have done so much better. Perhaps the "hindsight" of some other man may answer as a "foresight" for you.

Where one can do so, it is a good plan to save seeds of all kinds. It is better to save garden seeds than it is to depend on buying. One can buy seeds and test varieties, and when good varieties have been found the seed should be saved at home.

As a rule doing chores after dark does not pay. It is as important that chores are well done as any of the day's work, hence they should be done in daylight. There may be times when it will be well to run the choring into the night, but as a rule the practice should be to do them in daylight.

A newspaper item states that China is awakening to the advantage of scientific agriculture. In many provinces agricultural colleges are being established which are generally under the supervision of Japanese, who are introducing American ways and methods of teaching scientific agriculture.

I have never computed the loss to wheat and oats by leakage of a granary or by rats and mice, but judging by what I see each year when cleaning out the bins I am led to believe that it is much larger than it should be. When I build new granaries I shall make the foundation of concrete, and it will be rat proof.

I have a neighbor who has been fighting trusts and combines for more than twenty-five years. Recently he told me that he was going to join the trust now being organized to regulate the price of farm products. This illustrates what I have been saying "that all trusts are wrong but ours." In my opinion, one trust is as bad as another.

It is a very common thing to hear farmers say that everybody stands ready to cheat the farmer. Yes, while that is true, many farmers stand most ready to cheat themselves. It will be well to watch one's self as well as the other fellow. As a rule the man who watches himself is best capable of watching his fellow man. He knows whom to watch.

An Illinois friend writes me that he has been baling hay from the swath. He makes bales of about sixty pounds and in storing them away they are set on edge, leaving a small space between them. Bales of larger size will do, but in foggy weather they are liable to heat. He says the baling can be done with practically the same amount of help required to care for the hay in the old way.

Select a piece of ground large enough for garden purposes close to the house, haul plenty of well-rotted manure on it and not later than October plow it. Any time between now and spring a chicken-tight fence can be put around it and it will be ready for the earliest vegetables. I have a large garden, one side of which is put to early vegetables one year and the next it is put to late varieties and thus there is a change.

It is well enough for a boy to know the advantages of an education. The man in the future without an education is handicapped. The average man with an education gets \$1,000 a year; the average man without an education can get \$1.50 per day. In forty years the former will earn \$40,000, while the latter has earned \$18,000. The man with an education is \$22,000 better off than the other man. It pays to think and to know how to do certain things. Every day in school is worth a good deal to the average boy.

We often wonder about the origin of the Colorado potato bug. I have looked him up, and find that he has existed for ages on the plains and that his former diet consisted of the wild potato and various plants of the tobacco family. There has never been enough of these plants to justify these bugs growing large families, hence they have been kept in check. When the western farmer began operations and started in the potato business it was a delight to these bugs and they increased rapidly. The Colo-

Mr. Edison Says:

"I want to see a Phonograph in every American home."

Endless variety of music and entertainment, constant amusement for all the family!

FREE TRIAL

The Edison—the genuine Edison—positively on free trial—and a free trial IN YOUR OWN HOME!

No Money Down—No C.O.D. (An offer for all responsible people.) Payable—if you decide to keep it—on easiest possible terms at lowest cash prices, without interest on payments.

\$2 a Month (and upwards for larger outfits) now pays for a genuine Edison Phonograph Outfit, including one dozen genuine Edison gold-moulded records.

rado potato bug is now found almost everywhere where potatoes are grown.

In marketing various kinds of farm produce it is well that the marketer look well—as well as the produce that is being sold. This has a great effect on customers, and it will pay to have a good appearance in selling produce to city or town people.

For many years I have spent a week at the state fair, and I know no better place for an outing that will afford so much pleasure along with some business. The farmer has business at the state fair. The things learned there are in keeping with the things in which he is interested. The show of fine stock at the Iowa State Fair this year will be better than ever, which is saying a good deal. Nowhere on earth will be found better cattle and hogs. Make arrangements now to attend the Iowa fair at Des Moines, the last week in August.

AN ADEQUATE SUPPLY OF CARS FOR SHIPMENTS OF LIVE STOCK.

An important practical question for live-stock men and farmers is a prompt supply of an adequate number of cars for shipments of live stock, either where the initial and terminal points are in the same state, or where the initial point is in one state and the terminal point in another state. When the initial and terminal points are in the same state, there is no question of the power of the state to control the matter, if the regulations are fair and reasonable. But where the initial and terminal points are in different states, other questions arise, because this is interstate commerce, which by the United States constitution, is placed under the exclusive control of congress.

In a case before the United States Supreme Court, *Houston R'y Co. vs. Mayes*, decided April 2, 1906, the state of Texas had passed certain laws which provided, in substance, that upon a written application made by any shipper of freight, delivered to an agent of a railway company, stating the station or switch where the delivery of the car was to be made, the point of destination, the number and kind of cars required, and the time when desired, and upon payment to the railway agent of one-fourth of the freight to which the carrier would be entitled for the shipment, the railway company must furnish the cars required within the time limited by the law, after the written application was delivered, that is three days for ten cars or less, six days for more than ten cars and less than fifty cars, and ten days for fifty or more cars, except in case of strikes or other public calamity, and for its failure to do so, the carrier was made liable to the shipper for the payment of \$2 per car, per day, for each day's delay, together with the actual damages suffered by the shipper.

On April 9, 1903, Mayes served a proper written application on the railway agent at Llano, Texas, for seventeen stock cars, deposited the requisite one-fourth of the freight charges, and requested the cars to be delivered on April 20th. Mayes afterwards tendered the balance of the freight charges; and, on the day specified, had 625 head of cattle on hands at Llano, ready for shipment. The company failed to furnish the cars until the following day. Mayes then sued the railway company for the one day's delay, and recovered the statutory penalty of \$425, and \$500 actual damages to the

stock caused by the delay. The railway company appealed through the state courts, where it was defeated, and finally carried the case to the United States Supreme Court.

The opinion was delivered by Mr. Justice Brown, who referred to the rule that the power of congress over interstate commerce did not preclude any state from exercising what is called its police power, being a class of regulations for the public good.

The opinion of the court said:

While there is much to be said in favor of laws compelling railroads to furnish adequate facilities for the transportation of both freight and passengers, and to regulate the general subject of speed, length, and frequency of stops, for the heating, lighting, and ventilation of passenger cars, the furnishing of food and water to cattle and other live stock, we think an absolute requirement that a railroad shall furnish a certain number of cars at a specified day, regardless of every other consideration except strikes and other public calamities, transcends the police power of the state, and amounts to a burden upon interstate commerce. It makes no exception in cases of a sudden congestion of traffic, an actual inability to furnish cars by reason of their temporary and unavoidable detention in other states, or in other places within the same state. It makes no allowance for interference of traffic occasioned by wrecks or other accidents upon the same or other roads, involving a detention of traffic, the breaking of bridges, accidental fires, washouts, or other unavoidable consequences or heavy weather.

A dereliction of the road in this particular, which may have occurred from circumstances wholly beyond the control of its officers, is made punishable not only by damages actually incurred by the shipper in the detention of his stock, but, in addition thereto, by an arbitrary penalty of \$25 per car for each day of detention. The penalty which was assessed in this case, though the detention was only for one day, amounted to nearly as much as the damages, and might, in another case, amount to far more.

Although the statute in question may have been dictated by a due regard for the public interest of the cattle raisers of the state, and may have been intended merely to secure promptness on the part of the railroad companies in providing facilities for speedy transportation, we think that in its practical operation it is likely to work a great injustice to the roads, and to impose heavy penalties for trivial, unintentional, and accidental violations of its provisions, when no damages could actually have resulted to the shippers.

Although it may be admitted that the statute is not far from the line of proper police regulation, we think that sufficient allowance is not made for the practical difficulties in the administration of the law, and that, as applied to interstate commerce, it transcends the legitimate powers of the legislature.

The judgment of the court of civil appeals is, therefore, reversed, and the cause remanded to that court for further proceeding.

The results are that the right of each state is established to enact laws for the purpose of securing a prompt supply of cars for stock shippers and others; that such laws come within a proper exercise of the police powers of the state, and do not interfere with the power over interstate commerce, which belongs exclusively to congress; but such regulations made by the state must be fair, reasonable, and not unduly onerous and burdensome upon the railway companies affected by such state laws.

ARE YOU GOING ABROAD?

To Europe, Alaska, South America, China, Japan, Australia or around the world. Full information, details, lowest rates can be procured from A. J. Cheeseman, C. P. & F. A., Chicago & Northwestern Railway, 401 Walnut St., Des Moines, Iowa.

\$5.95 TO MINNEAPOLIS AND RETURN

Via Chicago Great Western Railway, account G. A. R. Encampment August 13th to 18th. Tickets on sale after August 11th. For further information apply to E. J. Sawyer, City Ticket Agent, 514 Walnut St., Des Moines, Iowa.

Entered at Des Moines Postoffice as second class matter

PUBLISHED EVERY THURSDAY.

SUBSCRIPTION RATES—Single subscriptions, \$1 a year; ten copies one year, \$10, and an extra copy to get up of club. In clubs of one hundred or more, 25 cents a year. Single subscription three years in advance, \$2; five years in advance \$3; ten years in advance, \$5. Remit by draft, registered letter, postoffice or express money order. In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send the old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

THE FAT BREEDING HOG.

One of our Nebraska subscribers sends the following communication:

I desire to call attention through your columns to one point in our present judging system at fairs. In the first place I do not approve of the practice of using but one judge, neither do I favor the plan of putting breeding animals into the condition required by our meat markets. They should be shown in smooth breeding form. Many of our best animals are ruined for future breeding purposes by overloading them with fat for show purposes. I think your paper should take up the fight in earnest and see if swine men will not be educated to that point where they would stand just as good chances to win with a hog straight and smooth as with one fitted to and beyond the danger point.

The theory of the above proposition is absolutely sound, but up to date it has

never worked out in practice and we doubt if it ever will. Some men are able to bring hogs to a very high finish and to a heavy weight without impairing their breeding qualities, and just as long as swine shows exist just so long will such men keep to the front. No man with a smooth, straight hog, can win out at any of our large shows in these days. The difference between a "smooth, straight," mature hog and one that is fitted might amount to 200 or even 300 pounds. Undoubtedly the fitting covers up many defects, and no judges have yet been found who were able to make due allowances for the defects that have been remedied by feed alone.

Nevertheless we would like to see the matter agitated until breeders would show a little more sense in the fitting of the pigs under six months. It is very much to be doubted if a sow or even a male can be made to weigh 200 pounds by the time it is six months old without in the majority of cases impairing its breeding qualities. We believe that our college judges; that is, men from the agricultural colleges who do this work, could help out this situation some and encourage the man who is able to get smoothness and size without a dangerous degree of fatness. A yearling and two-year-old animal may, with impunity, be loaded for the fairs, but a gilt or a male under six months never.

Of Interest to State Fair Visitors.

Announcement has previously been made through these columns concerning the date of the 1906 Iowa State Fair. It will be held from August 24th to 31st, inclusive. The entries so far promise to greatly outrank all previous records in most of the departments. More money will be put into premiums than ever and a number of new features of entertainment added.

During the next few weeks the columns of The Homestead will contain some special advertising matter that will interest all of our subscribers who contemplate attending the fair. In nearly every case the advertising will be that of individuals or firms who will make a display on the state fair grounds or who are, on the other hand, permanently located in the city of Des Moines. Special attention is called to the matter at this time because The Homestead believes that a state fair like that held in Des Moines furnishes one of the best occasions of the year for inspecting intelligently articles of various kinds, the purchase of which is contemplated. We therefore invite a careful perusal of our advertising columns, because we believe that there will be found there suggestions that will be valuable to those who attend the fair.

The "Only Automatic self-cleaning endless conveyor" is treated very thoroughly on page 5 by the Litchfield Mfg. Co. You cannot afford to miss it. This is one of the links that makes the long chain of friends for this popular machine.

GRAND ARMY VETERANS.

Do not be misled into the belief that any

Save Your Crop

When you get it in the barn from damage by lightning by installing a system of our copper lightning rods. In rodding thousands of buildings no damage is ever done where they are used, but where they are not used three-fourths of the losses on farm buildings are caused by lightning.

You put in your time growing a crop and harvesting it, and store it in your barn for safety. Should you not protect it from lightning when it can be done with so little difficulty and expense?

Our booklet, "The Laws and Nature of Lightning and How to Control It," will give you much valuable information. Write for it and we will send it free, and when you get ready to buy lightning rods it will be useful.

All of our goods are branded with our registered trade mark and each of our agents has an agent's certificate. Do not buy an imitation, nor something said to be just as good, but look for the trade mark, D & S, on the end of the spool and make the agent show you his certificate. This will insure the best of copper in your rod and assure you fair, honest treatment and a good job, the work being done by a man who knows his business and who will issue our guarantee when the job is finished.

SERAPHINA.

The above illustration of Seraphina—taken from a photograph—shows the material on which Mr. Geo. L. Belcher, of Carrollton, Mo., founded his herd of Short-horns that are to be dispersed on Wednesday, August 8th at Walnut Ridge Farm near Carrollton. Several daughters of this grandly-bred Cruikshank cow go in the sale. She will also have several granddaughters in the sale. See page 21 for advertisement and breeding of Seraphina.

(\$5.95 from Des Moines); tickets having limit of August 31st to return, with extension privilege to September 30th on payment of fifty cents. Sleeping car rates, \$2 standard, and \$1 tourist. On August 13th the Chicago Great Western Railway will have a special train from Des Moines at 8:30 a. m., arriving at St. Paul and Minneapolis in the early evening. For full information address E. J. Sawyer, G. T. A., 514 Walnut St., Des Moines, Iowa.

NEW BOOK ON SOUTH DAKOTA BY THE CHICAGO, MILWAUKEE & ST. PAUL RAILWAY.

A new book descriptive of South Dakota, its resources and opportunities, has just been published by the Chicago, Milwaukee & St. Paul Railway. The first chapter tells all about Lyman county and the rest of the territory west of the Missouri river recently made accessible by railway extensions. The book will be sent to any address for two cents for postage. F. A. Miller, G. P. A., Chicago.

THOUSANDS OF MEN WANTED AT ONCE TO HARVEST THE CROPS IN MINNESOTA AND THE DAKOTAS.

Low rates in effect from all points on the Iowa Central Railway. Tickets for sale daily August 1 to 31, 1906.

Splendid wages are offered, ranging from \$1.75 to \$3.00 per day, including board. For rates call on agents or for full particulars address A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

SUMMER TOURIST EXCURSIONS

Via Chicago Great Western Railway to points in Alberta, Arizona, British Columbia, California, Idaho, Montana, Oregon, Washington, and Mexico City. Stopovers and side trips allowed. Tickets on sale daily to September 15th. Final return limit October 31st. For full information apply to E. J. Sawyer, City Ticket Agent, 514 Walnut St., Des Moines, Iowa.

FISHING AND CAMPING.

Tickets are on sale daily to Madison Lake, Waterville and Elysian, Minn., via the Chicago Great Western at rate of one fare and one-third for the round trip. Full information from E. J. Sawyer, G. T. A., 514 Walnut St., Des Moines, Iowa.

From the Farm to the Agricultural College

BY W. J. KENNEDY, IOWA AGRICULTURAL COLLEGE.

We are nearing the opening of another college year. Parents and young men alike are struggling in many cases with the college-course question. A few, comparatively speaking, will enter with the opening of the college year, but the large mass will not do so.

No young man should be denied the right of a college education; it is something which by right belongs to the masses and not to the favored few. This is especially true today, when colleges are strengthening what ought to be called their "utility" courses. While this applies in a measure to all educational institutions, it is especially true of the land grant colleges. They were planned by far-sighted, practical men; they have not only fulfilled the highest hopes of their founders, but in many instances they have grown and proven useful in a measure never before conceived. They were founded to help the man on the farm. For many years they were not as useful as they now are. Many reasons might be given for their slow growth. The farmers, as a rule, did not appreciate the agricultural college; they did not seem to realize that the function of the college was to help them; too often they regarded the college as their enemy. In many instances these agricultural colleges were sadly crippled by having an unfit man at their head. Agricultural education was new; thus it meant lots of hard work to bring it up to its present standing.

Things are different now. The agricultural college is today recognized as a most valuable institution, serving a most useful purpose in the state. It is the place where both the father and son may study to good advantage. To the former the short courses are helpful, while the young man should have the advantage of the full four years' course.

For several years the writer has made a rather close study of the American and Canadian agricultural colleges. He has seen young men enter these institutions, graduate, and return to the farms. As a rule, they have become leaders in their respective localities. All of these things have been encouraging. It was not until he visited the little country of Denmark, where more than 75 per cent of all the young men operating farms, are either graduates of agricultural schools or have spent from one to three years at such schools, that he fully realized the untold advantages of these institutions to a country. These people are handicapped in almost every respect in their farming operations as compared with the American farmer. They live in a northern climate, the land is poor and vegetation is limited; still they succeed. What they lack in natural advantages is more than made up by their thorough methods of doing things. They use their heads as much as their hands in their farming operations. They more than make up in the quality of their products what they lack in quantity. In less than two decades they have captured the world's markets for their butter, bacon and eggs. They make the prices for these products and other countries clamor to see who will be next to Denmark. This has been accomplished solely through the aid of the Danish agricultural colleges and experimental stations, which number in all about half a hundred, or one for each 350 square miles of country. To these people an agricultural education is considered just as necessary as our people consider the public school education.

Young man, you will be compelled to confront problems of which your father never dreamed. With high priced land and high priced feeding stuffs it is self-evident that the days of haphazard methods of farming are past. If you are to manage a farm of your own, or wish to manage some other man's farm, ever keep in mind the one word, preparation. It is the watchword to success in every avenue of life. Without a thorough preparation no man can succeed. This is just as important in farming operations as it is in the professional or commercial world. In fact, it is more so, as the farmer has more problems to solve than any other business man. As the country grows older, this will become more evident. New problems such as insect pests, soil treatment, animal diseases and

other complicated questions are sure to be more and more prevalent.

A course at any of our state agricultural colleges will give the proper foundation for future work. In these institutions the underlying scientific principles of agriculture are thoroughly taught. Without an understanding of these principles farming operations will always be more or less of a drudgery. With an understanding of the same the work becomes more and more interesting and the burdens are made lighter. It is the basic principles that are needed. You can learn to do many of the so-called practical things much more economically on your own farm than at college. These colleges are practical in what they undertake. For instance, you can learn more in a one year's course in live stock judging at a college than the average man on a farm will pick up in a quarter of a century. How can such a thing be accomplished? It is simply because at these colleges the men in charge of the work have made a special study of the market demands and the most approved types of the different breeds of animals. Combine this knowledge with a good equipment of animals available for such work, and the results are self-evident. The same is true of the numerous other lines of college work.

They are manned by experts who, with the proper appliances, are in a position to impart useful information. It is hard to measure in dollars and cents the great benefits to be derived from such an education.

If I were to have my choice of the best half section of land in the corn-belt without an agricultural college education, or an agricultural college education, I should prefer the latter. I have in mind at the present time two young men, both born in the state of Iowa, one in the city of Des Moines, the other in Tama county. Eight years ago this fall the boy from Des Moines entered the Iowa Agricultural College. He had no money, but he did have plenty of grit, and was willing to do any kind of work. He did all kinds of work to earn money to pay his board and room rent; he worked on stock farms during the summer vacations and on two different occasions had to remain out of college a term to earn money. Three years ago he graduated in the animal husbandry course. A position was open to him at fifty dollars per month. He accepted it,

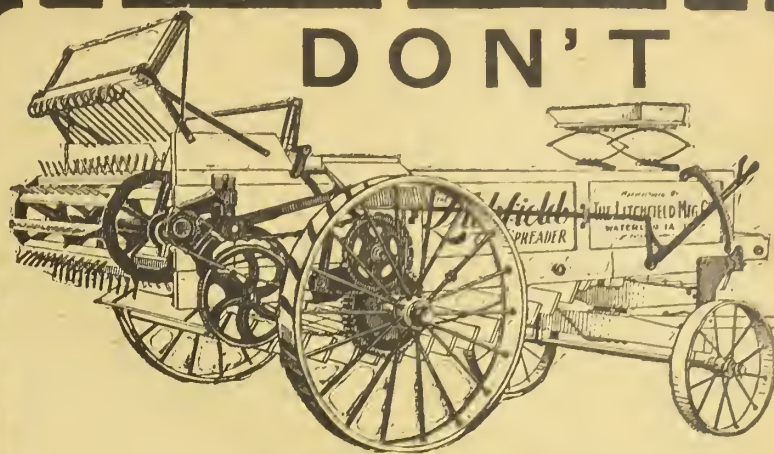

made good, got a better one, and so on, until a few months ago we offered him \$1,500 a year to accept a responsible position in the animal husbandry department. He accepted our offer. In less than twenty-four hours his employer offered him \$2,500 per year to continue where he was—in charge of a large herd of dairy cattle.

The young man from the farm in Tama county, being the oldest of a large German family, was obliged to make his own way early in life. He commenced work on a farm at \$18 per month, in which position he remained for some

time. He desired an agricultural education, but his parents objected; they thought he was doing well in the position he held. He had higher ambitions, thus against the wishes of his parents he entered the Iowa Agricultural College four years ago this fall. They did not help him, but this did not daunt him. He worked during the school year part time and always had a good place during the vacation months because he always made good wherever he went. He graduated in the animal husbandry course this year, is now on his way to the Pacific coast, where he will manage a large herd of dairy cows at a salary of \$50 per month with room and board furnished, and a promise of \$5.00 per month increase for five months and then an opportunity to become a partner in the firm. Has his college course done anything for him? How I do wish that every boy on a farm could just spend half an hour with this young man and hear what he has to say on the subject. If they could, the agricultural college would have hundreds of students for every one they now have.

Some people claim that the agricultural colleges take the boys from the farm instead of keeping them interested in farm work. During the past five years more than 80 per cent of the graduates in agriculture of the Iowa Agricultural College have returned to the farms. Of the remaining 20 per cent more than nine-tenths of them are engaged in some phase of agricultural work. While this is true of the graduates, it can be safely said that better than 95 per cent of the students who have taken special courses or shorter courses have returned to the farm. Our records show that for every young man who has come to us from the farm and gone into some other line of work, that more than ten young men have come to us from the cities and towns and have gone to the farms after completing their course.

Farming is the most dignified and honorable calling that any man can pursue. The educated farmer, the man of affairs, has within his grasp the best and most honorable positions that can be bestowed by man upon a man. With more attention given to the education of our young men on the farms the position which farmers will occupy will be better and higher with each succeeding generation as more young men go from the farm to the agricultural college and back again to the farm.

DON'T LOAD YOUR HORSES' NECKS.

WE WANT to call the attention of our customers to the all-important question of how the team shall be hitched to the manure spreader. It is a momentous question and often not carefully considered—how to get free, flexible movement to the pole without loading the team unnecessarily.

When you examine the Litchfield Manure Spreader you will see what we mean. You will find that the hitch is low, and that the draft on the tugs practically takes all weight off from the necks of the horses. This is something that is impossible with those machines where the front axle is not braced to the spreader and where the tongue is obliged to answer the purpose.

We cannot think that any sensible man will want to brace his front axle on his horses' necks, as it is necessary to do where the tongue is the only retaining brace or support for this front axle. Examine the Litchfield Spreader and see how our bolster is braced to the front of the frame and how the axle is connected by a high carbon steel brace, back under the body of the machine.

A thorough bracing of the front axle, so that the wheels cannot be pulled out from under the machine or collapsed back under it when striking chuck holes and other obstructions, is absolutely necessary. Many manufacturers put this bracing strain onto the tongue and therefore onto the horses' necks instead of confining this bracing to the machine itself.

The tongue on any vehicle should be merely a means of guiding the vehicle and should be hinged freely, so that no load up or down shall come against the horses. It is not wise to drag down on your horses' necks when pulling the machine through heavy ground or through bad chuck holes; neither is it advisable to throw the point of the tongue in the air as high as the harness will permit it to go when backing up in bad places. In other words, we say, hinge your tongue freely to the spreader and protect the necks of your horses. Be sure to watch this space next week.

W. J. KENNEDY.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department" in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

QUACK GRASS.

A Subscriber, Peterson, Iowa.—I have a neighbor whose farm adjoins mine. He has several acres of quack grass in one of his fields. He is doing nothing to stop the spread of it. It will only be a short time till my field adjoining his will be in the same condition, and it will cause me loss and damage. Is there any way by which my neighbor can be compelled to check the spread of the quack grass?

Answer.—There is no legal method by which you can compel your neighbor to check the growth of quack grass on his land.

INFRINGEMENT OF PATENT.

A Subscriber, West Union, Iowa.—(1) Where an article has been patented, has anyone a lawful right to make such an article for his own use? (2) If not, what would be the penalty?

Answer.—(1) No. The making of an article covered by a patent right, for one's own use, would be an infringement of the patent right, and the person who owned the patent right could sue and recover damages for such infringement. (2) There is no penalty, strictly speaking, for the infringement of a patent. It is not a criminal offense. The person merely subjects himself to a suit for damages.

PARTITION FENCE—NORTH DAKOTA.

A Farmer, Grand Forks, North Dakota.—I wish to fence my farm. Can I compel the owners of adjoining lands to build their share of partition fences?

Answer.—You can do so if such owners use their land, but not if they do not use it, letting it lie open and unclosed. If such owners use their land for stock or crops and have it enclosed on all sides, but next to you, notify them that you are about to build your share of a partition fence, and demand that they build their share. If they refuse to do so, you would best engage a competent lawyer to bring the proper proceedings against them.

TAXES IN TWO STATES.

A Subscriber, Wessington Springs, S. Dak.—I moved from Iowa to South Dakota in March, 1906. (1) Had the assessor in Iowa a right to assess my personal property there? (2) I paid my Iowa taxes which were assessed in 1906. Can I be lawfully assessed in South Dakota for 1906? (3) Explain Sec. 1404 of the code of Iowa.

Answer.—(1) The Iowa assessor had a right to assess your property, because all property which is in Iowa on the first day of January is assessable, and subject to taxation. (2) You can. The reason for this is, that all property in Iowa on January 1st is subject to taxation there, and all property in South Dakota on the first day of May is subject to taxation there. You might apply to the tax officers of South Dakota, to be relieved there, as it is manifestly unjust that you should have to pay in both states, but we know of no way by which you can compel them by law to give you such relief. (3) Section 1404 of the code was made to reach personal property in the state of Iowa, which is owned by non-residents, and is intended by them to be removed from where it is located, to some other place, for sale or consumption. In such a case the assessor must assess the property in the owner's name if known, and if not known,

so designate it. The assessment then becomes a lien on the property relating back to January 1st of that year, and if any one attempts to remove it without paying the taxes, it can be seized by a distress warrant to enforce the lien of the assessed taxes.

ADDITIONAL FIELD NOTES.

THE EARLES SHORT-HORN SALE—LAST CALL.

Again we wish to remind our readers of the forthcoming Short-horn sale of Dr. W. H. Earles, of Milwaukee, Wis., which will be held at Burwood Stock Farm, on Tuesday, August 7th. Mention has been made in previous issues of the bull consignment. This week we wish to emphasize the quality of the female offering. Dr. Earles has within the past two years been the purchaser of much of the best stock offered for sale by Short-horn breeders throughout the middle West at public auction. He has visited a number of the best herds and secured many of the tops at private treaty. Thirty-nine females have been consigned to this sale, of which but four are not either safe in calf or have calf at foot and these are too young to breed. It is seldom that Short-horn breeders have the opportunity to secure so many matrons in one sale and they should not be slow to grasp the situation. One of the best herds in the West has been established along correct lines and Dr. Earles deserves the patronage of every breeder of the central West. Sappho, No. 1 of the catalog is a Cruickshank Secret by Prince Armour, one of the best sons of the noted Baron Cruickshank. The dam of Sappho was got by Golden Lord, a bull of Colonel Harris' breeding and used successfully in the Walnut Hill herd by the late Martin Flynn. Sappho is safe in calf to the service of White Hall Count since April. Very few better cows are offered for sale at public auction and the breeder wishing to add an extra good cow of the show-yard type should not overlook this animal on sale day. Something of her usefulness may be seen from the fact that she is only six years old and has four living calves to her credit. She was once sold for \$1,005 and were it not for the fact that Dr. Earles wants to offer the very best class of cattle she would not have been included in the auction. Imp. Roan Ruby 36th is a daughter of the Duthie-bred bull, Mountain Archer, he a son of the noted Scottish Archer. She is a Cruickshank Brawith Bud and is a cow of great scale and substance, a very rapid breeder and good mother. She is safe in calf to the service of White Hall Count. Golden Coin is another Brawith Bud, bred by Mr. C. C. Norton, of Corning, Iowa. Her sire was Imp. Banker, he by Clan Alpine. Golden Coin is a very smooth cow, with plenty of size and quality. She, too, is safe in calf to the service of White Hall Count. One of the attractive young females in the offering is the Marr-Emma cow, Walnut Hill Emma, got by Orange Boy. A red heifer calf at foot and bred again to Whitehall Sultan makes this lot one of the attractions of the offering. Imp. Sweet Bouquet is a daughter of the Cruickshank Broadhooks bull, Imp. Lovat Champion, and her dam was by the Marr-bred bull, Lowland Chief. This cow is well along in calf to White Hall Count. One of the richest-bred Cruickshank females offered for sale in many seasons is Village Maiden. She belongs to the Village Blossom family and nine of the dams in her pedigree were bred by Mr. A. Cruickshank. A fine red bull calf at side by the Marr Alexandria bull, Alexander, makes this one of the attractive lots in the offering. Glenfoyle Duchess Gloster 2d is a richly-bred Duchess of Gloster by Imp. Scotch Fame. This cow has a fine bull calf at foot by Lovat Champion and is safe in calf to White Hall Count. A fine show heifer is found in Cerry Lass. She is a daughter of the noted bull, Ceremonious Archer, and her dam was Imp. Roan Lady. Cerry Lass was a winner at the World's Fair in St. Louis and at the American Royal in calf class with strong competition. Bred to White Hall Count in January she should prove a valuable addition to some good herd. Rose of Autumn 8th should suit the most particular buyer. In both individuality and breeding she is one of the tops of the offering. Safe in calf to White Hall Count she is fit to go into any company. Secret Sultana 13th is another of the good ones. She is a Cruickshank Secret of pleasing individuality and is safe in calf to Royal Wonder. Roan Rosemary is a very valuable young cow by Royal Banner, a bull used by Mr. H. F. Brown, of Minneapolis, Minn., with much success. Roan Rosemary is a cow of great scale and substance. Her breeding and individual excellence entitle her to place in the herd of most any discriminating breeder. Her half sister, owned by Mr. F. W. Harding, took second prize in her class at the Iowa and Minnesota State Fairs last year. We have briefly reviewed some of the individuals selected for this important offering and it is important that every breeder in the market for good cattle should be present at this sale. Dr. Earles extends a cordial invitation to Short-horn breeders to be present at this his first annual sale. Parties from a distance are invited to be his guests at the Davidson Hotel, Milwaukee, Wis. Burwood Farm, where the sale will be held, may be reached by electric line. Take Muskego Lakes car from terminal station, Third and Sycamore streets, at 8:15, 10:15 and 12:15 to St. Martin's, where conveyance will be in waiting to take all passengers to the farm. Look up the announcement on page 20 of this issue and write for catalog, kindly mentioning The Homestead. Plan to be present on Tuesday, August 7th, at Burwood Stock Farm.

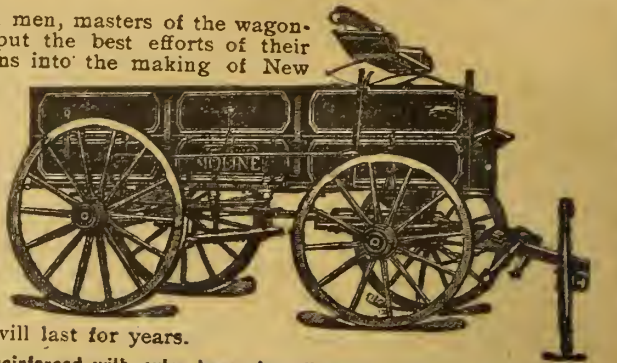

THE GREAT GARDNER DISPERSION.

There are great improvers of cattle in America today. The youngest breeders remember the time when the Herefords exhibited at our fairs, were somewhat lacking in the thighs and were called inferior hind-quartered cattle. Today the best specimens of this breed are well filled there, and there has been a marked improvement in character and finish during the past twenty years in this breed. Many of us also remember that notwithstanding the wonderful record of the Aberdeen Angus as a market topper the great steers and the great

THE NEW MOLINE
THE IRONCLAD WAGON!!

Five hundred men, masters of the wagon-maker's craft, put the best efforts of their hands and brains into the making of New Moline Wagons.

With its gearing of select Hickory and tough White Oak and its box with Yellow Pine Bottom, grooved and matched, the New Moline Wagon has a foundation that will last for years.

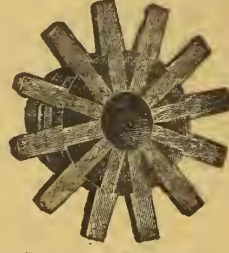

It's so strongly reinforced with extra heavy iron throughout, that farmers call it the "Ironclad" Wagon.

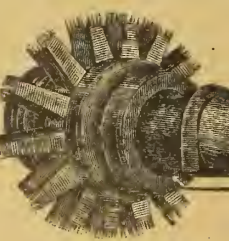

Pole, doubletrees, singletrees, gearing and box are so thoroughly protected and strongly braced with heavy ironing that its solidity and durability defy the test of time.

Its dust-proof skeins keep out every particle of dust and dirt.

Lightest Running Wagon in the World

Section Hub and Spokes. Practically One Solid Piece.

Note Dust-Proof Skein.

The New Moline is built right, from the ground up. It's a light-running Wagon, and the longer you use it the better you'll like it, for it's got more up-to-date features, and gives more years of satisfactory service than any ordinary wagon. We've been perfecting this wagon since 1854.

We fully guarantee every New Moline Wagon that leaves our works.

The demand for New Molines is enormous—taxing the full capacity of our immense factories.

GET THIS BOOK! We want every farmer to have a copy of our wonderful Wagon Book. It doesn't make any difference whether you are thinking of buying, or not—send for it anyway! It tells just how the genuine "Ironclad" Wagons are made. Shows all the parts SEPARATELY; and you can SEE how they are IRONED and BRACED and DOUBLY REINFORCED making THE NEW MOLINE the most durable as well as the lightest-running wagon on earth. The book tells you more about a wagon than any other Wagon Book in existence. It is FREE, postage prepaid by us.

females presented by this breed, that it has often been said that it was very difficult to produce a good Angus bull. This may or may not have been a declaration made and started by an enemy of the breed, but it has been said and we have seen it in print. Good bulls or rather superior ones are not easily produced in any breed, but whatever may have been the conditions in the past there is ample proof that the Angus breed is not lacking in this respect today. Mr. C. H. Gardner, of Blandinsville, Ill., who is dispersing his celebrated herd at Galesburg, Ill., on August 14th, is one of the men who finds no trouble in producing outstanding bulls. From the time that he brought out Rosegay as a yearling in 1900, down to the present time he has never failed during all these years to have a first-prize or champion bull at the shows. In his dispersion there are cataloged more superior bulls than have ever before been sold in America in one auction. There are seven high-class show bulls from which the first prize and champion winners for 1906 should easily be selected. There are Prides, Ericas, Westertown Roses and Vines. Others will have attention in later issues of this paper and we desire here to comment upon the champion, Vala's Rosegay. He is the only representative of the Vine family in the auction and he probably stands alone as the only champion bull of any breed the product of two such champions as Rosegay, the most popular of all Angus champion bulls, and Vala, the recent queen of the beef breeds. An analysis of his pedigree should prove interesting to all, as individually he is believed to be capable of defeating any Angus bull in this country, and has proven himself a wonderful sire. He comes maternally from the Vine of Skene family and his granddam was a grand-daughter of Vine 2d of Skene, one of the most noted and beautiful cows of her day, and a Highland Society winner. The Vines were noted winners in the herd of Mr. Hamilton at Skene and while Vine 2d of Skene was about the only representative of it brought to America few cows have had such famous champions from them. The sire, Rosegay, comes from what is likely the greatest line of sires known to American show yards. Gay Lad was the most celebrated champion and champion sire of his time; Gay Blackbird was a Columbian prize winner and sire of champions; Heather Lad 2d was a first-prize Columbian winner and sire of champions, and Black Knight was

TIMOTHY

We buy timothy, clover and other farm seeds. Mail sample; state quantity and lowest price. IOWA SEED COMPANY, DES MOINES, IA.

the greatest bull of his day. The dam of Rosegay, Rose of Emerson 3d, has not since 1900 failed to have a first prize or champion bull representative in the big shows of America. She is therefore entitled to the distinction of being America's greatest breeding cow, since it is a record that can be duplicated by none other. She was got by Imp. Jim Jams, the sire of the famous Black Jam, and of the dams of several champions, including Rosegay and Royal Laddie. The second dam of Rosegay, Rose of Emerson, was by Blackbird Hero, whose son and daughter were mated to produce Black Monarch of Emerson, a celebrated sire of champion females. The third maternal dam of Rosegay was Rose of Burlington by the illustrious Black Knight. The paternal granddam of Rosegay was Lucia Windsor, the dam of the champions and record-breaking animals, Gay Lad and Lucia Estill, and she was by Imp. Ermine Reaser, the greatest bull of the breed imported into America. Going back to the dam, Vala, the recent queen of the beef breeds, we find that she was by the double Erica bull, Emulus of Kellor Park, and he was also the sire of the champion over all breeds, Empress Damask, and numerous other good ones. The dam of Vala, Valenta B., was by the champion bull, Beau Bill, and out of the prize-winning cow, Valenta, by the champion Lady Ida bull, Lord Hillhurst. This takes us back to the imported prize-winning cow, Vine 2d of Skene. The pedigree of Vala's Rosegay is simply a collection of the names of champions and celebrated breeding animals, and that champions should result from it is just what might be expected from such a pedigree. The man who is fortunate enough to purchase this champion can rely implicitly upon procuring the best results in the production of prize winners and great breeding animals. The catalog of this great dispersion with the pedigrees of the outstanding bulls, the show heifers and the sires and dams that have produced them will be sent on application to the owner, Mr. C. H. Gardner, Blandinsville, Ill., as per the announcement on page 19 of this issue. Mention this paper when writing.

**This Keeps
Lightning
Out Of Your
Telephones**

This is our "No Risk" Lightning Arrestor. Pull the knob, and your telephone is absolutely cut out. Lightning cannot enter your house.

Protects the house, avoids fire, insures safety for the family.

Simple! positive! sure. Book FREE.

Just send your name and address. Our book explains everything—how to get the complete arrestor. Fully guaranteed to protect us or we pay money back. Reliable Agents wanted. One man sold 15 one day. Another 33 in 6 days.

"Edith Setton, La Russell, Mo., was instantly killed May 31st by lightning while talking over country phone."

"Forty country telephones were burned out at Beatrice, Neb., in an electrical storm June 6th."

"Abner Hosking, Norway, Mich., was struck by lightning June 6th while standing near his country phone."

"Atlantic, Iowa, June 24.—Lightning played havoc with the rural phones in all directions."

All could have been prevented by using "No Risk Lightning Arrestor."

Lost Strayed or Stolen—One Cow

That is about what happens each year for the man who owns live cows and does not use a Tubular cream separator. He loses in cream more than the price of a good cow. The more cows he owns the greater the loss. This is a fact on which Agricultural Colleges, Dairy Experts and the best Dairyman all agree, and so do you if you use a Tubular. If not, it's high time you

did. You can't afford to lose the price of one or more cows each year—there's no reason why you should. Get a Tubular and get more and better cream out of the milk; save time and labor and have warm sweet skimmed milk for the calves. Don't buy some cheap rattle-trap thing called a separator; that won't do any good. You need a real skimmer that does perfect work, skims clean, thick or thin, hot or cold; runs easy; simple in construction; easily understood. That's the Tubular and there is but one Tubular, the Sharples Tubular. Don't you want our little book "Business Dairyman," and our Catalog A. 121 both free? A postal will bring them.

The Sharples Separator Co.
West Chester, Pa.
Toronto, Can. Chicago, Ill.

A Very Lame Excuse

Is that offered by other Cream Separator concerns, when they tell you that even though they do not extract all the cream what they leave in is not wasted because it goes to fatten the pigs. This is a fallacy. Professor Haecker, of the Agricultural Department of the University of Minnesota, declares that there is as much food value in skim milk as in whole milk. Therefore, the cream remaining is wasted.

You prevent all this waste by using an

Iowa Dairy Separator

What you want is every particle of the cream, and this is exactly what you get with the "IOWA." Write at once for catalog 25 and full information, which will come free by return mail. Address,

The Iowa Dairy Separator Co.,
Waterloo, Iowa.

OUR DAIRY DEPARTMENT.

SILO TESTIMONY.

BY R. M. WASHBURN, MISSOURI DAIRY COMMISSIONER.

I was at first prejudiced against the use of the silo, and did not get over that feeling until I had used silage with the cows that I was then in charge of for nearly a whole winter. The value of the stuff then began to make itself known to me. Since then I have been in intimate contact, either feeding it personally or feeding it to the cows of which I have had charge by proxy for the last eight years. But no one man's experience is sufficient on a thing of this kind. I have gathered points and opinions from others, some of which I will give:

Mr. Wm. Plummer, Hale, Carroll county, Mo., feeds silage to dairy cows and growing stock and says: "Our cows milk fine all winter and come out in good order in the spring. I could not get along without my silo now."

Mr. H. C. Goodrich, Calhoun, Henry county, Mo., says: "No dairyman can afford to be without a silo. I consider it the best and cheapest way to save the whole crop of corn. I have fed silage to dairy cows for twelve or thirteen years."

Mr. Fred Parcher, Maryville, Nodaway county, Mo., feeds silage to cows and young cattle and said to me: "It results in a saving of one-half in feed store bills, and over one-half in amount of hay eaten." This statement though seemingly extravagant is the opinion also of Mr. P. P. Lewis, Crescent, St. Louis county, Mo., who feeds from sixty to seventy cows heavily and sells his milk to a fancy trade in St. Louis. He has had a silo but one year, but is so well pleased that he is planning to build another this fall. His neighbor Mr. Thos. Shields, Eureka, Missouri, has had similar experience, and also contemplates putting up another silo.

A little statement made by Mr. Hurst of the firm of Redmond & Hurst, Tipton, Mo., is of interest. Two large sized silos are on his place. He says: "We are milking fifty cows in all stages of lactation, ten of which are heifers with first calf, and our check for cream for the month of January, 1906, was \$265. Not so bad for winter."

There are so many farmers of the old school that consider it a cow's privilege to go dry in the autumn and be a dead expense for four or five months in the year, that I wish they could all read the statement of Mr. Hurst.

Those who feed for beef purposes and have tried the silo are equally appreciative of it. Mr. H. S. Hand, Appleton City, Mo., says: "I fed all kinds of stock on silage with good results. I have used it in stall feeding with ground corn cob and all. Would not think of wintering stock without silage. We are feeding 300 head of cattle and find the silo a great saver of feed." The experience of Mr. McNish, of Brookfield, Mo., who has two silos is similar. He says: "I fed all classes of cattle with good results, especially for growing stock. I fed a car load of steers silage and ear corn and topped the market. The only difficulty in feeding the silage with ear corn is that the cattle which are being fattened will quit eating the ear corn and eat the silage alone. Corn I believe should be ground when feeding with silage to fattening steers." The results obtained by these two beef feeders is practically the same as that found by Prof. Herbert Mumford, of the Illinois Experiment Station.

There is another phase of this question which I find demanding attention and that is the proper time and manner of filling the silo. The labor problem is the great problem especially on the dairy farm. If by some means the labor of filling could be lessened the difficulty of getting help would be lessened. The practice is getting quite common, especially in our older dairy states, of cutting the corn and leaving it lie on the ground or standing in shocks for several days, even a week, before drawing it to the cutting machine. This allows the hauling of all that is valuable without the handling of such an excessive amount of water which can be as well supplied from the well. If no water is used at the time of filling it will mold throughout. But if a hose is

fastened to the silo and a continuous stream of water is allowed to play over the surface there will be little difference in the quality of the silage whether the corn was put in in the ideal green condition or whether it was allowed to evaporate its excessive amount of moisture before being cut into the silo. By planning the work on this basis the filling process may be done with a smaller crew and during a longer period of time.

Although it is not yet really common I feel that the practice of raising a few acres of sorghum each year to put into the silo along with the corn would be a good one to advocate. Sorghum contains so much moisture and will retain that moisture so long after being cut that even if the corn is dry the sorghum will furnish nearly or quite enough moisture. Then, too, occasionally a dry summer ruins the corn crop. Then it is that a crop of sorghum, which as we all know will stand drouth considerably better than corn, will be found of wonderful advantage.

"Don't Load Your Horses Necks," is the subject of a specially interesting chapter in the continued story by the Litchfield Mfg. Co. Turn to their regular space and read it.

HOMESEEKERS' RATES.

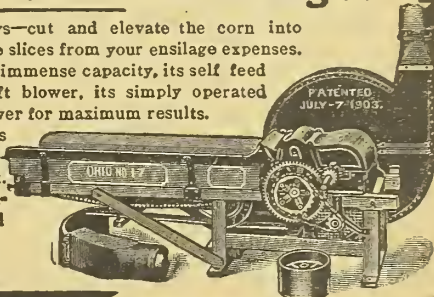

Every Tuesday, via the C. & N.-W. R'y, until December, 1906, to authorized home-seeker points in Wisconsin, northern Michigan, Minnesota, South Dakota east of the Missouri river, North Dakota, Alberta, Manitoba, western Ontario and Saskatchewan. Full information at C. & N.-W. passenger station or 401 Walnut St.

How About YOUR Ensilage?

"OHIO" Ensilage Cutters cut two ways—cut and elevate the corn into silo at an amazing speed; and cut off huge slices from your ensilage expenses.

How does it "cut" expenses? By its immense capacity, its self feed mechanism, its power-saving direct draft blower, its simply operated silage distributor, its minimum use of power for maximum results.

Silage as a milk and beef producer is far superior to grain. Our book "Modern Silage Methods" (10c) tells all about it. Our Ensilage Cutter Catalog will easily convince the man who wants the best. Send for it. Manufactured only by
The Silver Manufacturing Co.,
Salem, Ohio.

Only \$38 THE GREATEST BARGAIN ON EARTH

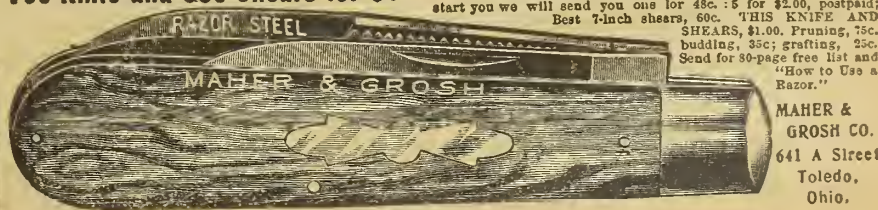

DESCRIPTION—Selected second growth hickory wheels and gears; Norway iron clips and bolts; inch axle double collars, full length body loops, long body, any width. Solid spring bellows back; sanitary spring cushions. Trimmed in dark green, tan or maroon leather, cloth or plush. Ideal spring cross bar in place of wooden cross bar if preferred. All wool top lining, leather quarters and back stays, curved top joints if desired, complete with storm apron, side curtains, boot and full length carpet. Nickel dash rail, hand rail and lazy back rail. Send for Big Free Catalogue of Vehicles and Harnasses in colors. A buggy factory selling direct must pay all of their expenses, salaries, etc., out of a few thousand buggies. Our expenses are all paid out of our agricultural implement factory. A buggy factory would starve to death on the small profit we get on a buggy. Write us before buying. The only place factory in the world selling direct to the consumer at wholesale prices.

VETERINARY MATTERS

PROFESSIONAL veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of \$1.00. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT

SHEEP COUGHING.

I wish to find out how sheep would act if they had stomach worms. Some of mine take spells of coughing at times, and I thought that it might be caused by stomach worms. The lambs are mostly affected.

Stomach worms do not cause cough, but that may well be due to "lung worms," regarding which we wrote fully in a recent article in these columns. Read article referred to.

WIND PUFFS.

I have a bay driving horse, weighing 1,250 pounds, that has wind puffs above his hind ankles. He is quite a speedy horse and has been troubled that way for about two years. Can I reduce them or take them off?

They are incurable when so long established, and should not be treated other than by applying bandages when horse is brought in from harness work. Pressure from flat corks inserted in bandages does some good.

A NEIGHBOR'S BULL.

I have some cows that I want to feed and ship to market about Christmas, so have been keeping the bull away from them in the pasture. My neighbor's bull jumped over the fence and served them. Is there any way that I could destroy that bull's work or their coming calves so that they would be ready to go to market in December?

We do not give advice as to causing abortion and the cows should be allowed to carry their calves. Meanwhile it is evident that you should properly fence to keep out the bull or attend to his case in another way.

COUGH.

I have a three-year-old dark bay mare that had the distemper last spring and has coughed ever since. She seems to be getting worse, and I am afraid it will turn into heaves. I work her some. What remedy would you advise?

See that stable is kept clean and well ventilated. Wet all food. Dissolve one ounce of chlorid of ammonia with one ounce of tincture of iron in a pint of cold water and give two ounces night and morning. Repeat when first bottle is finished if this medicine proves beneficial. If not, then give half an ounce of glyco-heroin three times daily.

ENLARGED GLANDS.

We have a nice young cow, two years and five months old, which has a lump on each side of her flanks as large as two fingers. The lumps are movable back and forth and do not seem to pain her in any way when we move them. She has been fresh about three months and seems to be all right every other way. Can you tell us what is the matter with her?

Without examination we are unable to say with certainty what causes the enlargements referred to, but we suspect that they may be enlarged lymphatics or fibroid tumors. Let them alone for the present, but if they increase in size a veterinarian should be asked to make an examination. Meanwhile if you can have it done have the cow tested with tuberculin to make sure that she is free from tuberculosis.

ECZEMA.

(1) I have been troubled now for the past three years by having my pigs get some kind of a skin disease when about two or three months old. They get scabby so that I have to dip them. Is this a disease of the blood or is it caused by a germ in the skin? They rub themselves; hair gets rough, curly and dry, and they do not thrive well. What treatment would prevent the trouble? (2) I had a pig about three months old die in this manner. In the morning he had a poor appetite, and his bowels would not move. I gave the pig an injection of warm water and soap and after that he vomited what should have passed out. After that he did not eat any more and died the next morning. I made a post mortem examination and found that food

in the stomach was ready to pass out, but the bowels were entirely empty and the end of the bowel was a dark red. Close to the end I found about a dozen little tumors about the size of a bean and a dark red color. I feed slop of about two parts of oats and one part of corn both ground together, with one part of middlings and some oil meal. After slopping I feed some dry corn, about three-fourths of an ear to one pig. What was the trouble and what treatment should I have used?

(1) The disease comes from over-feeding on any rich food, and especially where pigs are given insufficient exercise on grass, clover or rape. It also is seen where pigs are kept on damp or dirty bedding. Avoid these causes and kill lice by frequent dipping in solution of coal tar dip. Keep pens clean and well whitewashed. (2) Pig had stoppage of the bowels, and condition of rectum (end bowel) indicated "piles," often seen where constipation has come from high feeding. Pig possibly might have been saved by administering castor oil in milk.

LOCO POISONING.

(1) I have three two-year-old colts that are eating loco weed. Is there anything I can feed them or do for them to keep them from getting bad until I can take them out of the pasture this fall and put them on rye pasture and feed them? (2) What is best to do for a horse that has been bitten by a snake?

(1) No remedy has been found, and nothing will prevent the horses from eating loco if they can get to it. They should be kept away from the weed, but will take it to again when given a chance. (2) When a horse is known to have been bitten by a snake, tie a bandage at once tightly around the leg above wound and cauterize the wound with lunar caustic or red hot iron, or inject full strength coal tar disinfectant. Give internally large doses of stimulants once an hour if the snake is venomous.

INJURED TENDONS.

I have a six-year-old horse that got cut on the hind leg by stepping on an old can. The cut is about six inches above the fetlock and it cut into the leader some. The cut is all healed over, but it left the leader thick around the place for about two inches above and four inches below. I have been using lard and camphor and have also bathed it with hot water, and blistered it twice. The swelling has gone down some, but is still quite bad. The horse is still lame and does not rest his weight on that foot when standing in the stable. He weighs about 1,500 pounds. I have worked him some on light work the past week. Would like to be advised what to do to get the swelling out of the tendon.

It would be best to have the thickened tendons fired and blistered by a veterinarian, but if you cannot have this done, then blister repeatedly with cerate of cantharides at intervals of three weeks. Horse should not be worked, but may run on grass after each blister has been washed off.

PARALYSIS.

I have a sow which seems unable to get up. She makes some effort to get her feed, and will eat and drink when it is offered her. She has been in this condition for a month, but does not seem to lose flesh very fast. She was running on grass before getting sick. Some time ago I gave her some niter, then in a few days some turpentine. She had pigs early this spring. Can you tell me what ails her and prescribe a treatment?

As sow has been down a month we do not think there is any probability of recovery and would advise you to put her out of her misery. See answers under same head in back numbers of this paper. The cause of this form of paralysis is constitutional weakness from pampering on corn without sufficient exercise and it is brought on by irritation of pigs suckling. To avoid such troubles hogs should be made strong by complete nutrition, abundance of exercise and frequent change of blood in breeding stock.

HOMESEEKERS' EXCURSIONS.

CHICAGO GREAT WESTERN RAILWAY.

On the first and third Tuesdays of each month until November the Chicago Great Western Railway will sell homeseechers' tickets to points in Arkansas, Indian Territory, western Louisiana, Mexico, New Mexico, Oklahoma Territory and Texas at rate of one fare plus two dollars for the round trip, except that a maximum rate of \$23.00 from Des Moines will be in effect to above territory with the exception of Mexico. PEDIGREE Scotch Collie pups for sale. Males \$3, females \$5. Arthur H. Beck, R. F. D. No. 3, South, Des Moines, Iowa.

POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

GAPES.

We have had a good deal of inquiry about a remedy for gapes, which leads us to believe that this old-fashioned trouble has been more common than usual this summer. Those who have had experience in trying to treat birds with gapes will agree with us that prevention is far better than attempts to cure. It is a tedious and difficult job to try to treat chicks that are troubled with gapes. Writing on this subject, Mr. W. W. Kulp, in the Reliable Poultry Journal, says: "The remedy is to keep the chicks away from the infected ground. This may be done in several ways. Either put them on new ground, or keep them on a floor, or disinfect the ground. If they have a large run, it is something of a job, and an expense as well, and although it will pay, few farmers will do it."

"I keep all the early chicks in sheds, about fifty in a brooder. They must be kept off the damp ground for eight weeks, and kept growing by proper feeding. The food must be varied and include greens."

"Before I had the sheds, I fenced off plats of ground twelve feet square, and put fifty chicks in each with a brooder or three hens. Before putting them in, I sprinkled evenly over the ground a half bushel of air-slacked lime. This kills all the life in the ground, both animal and vegetable."

"The vegetable life would not matter, but if you do not put on enough to kill all the grasses, you will not kill all the worms. I have put chicks by the hundreds on ground on which, before it was treated, you could not raise a chick, but after treating, not a chick got a good sneeze."

RHODE ISLAND TESTS EGGS.

The Rhode Island Experiment Station recently made a test of various materials for preserving eggs and has found that the plan of packing eggs in salt and lime water have kept second only to those put in waterglass. A report says the eggs were kept in the solution for over a year and came out all right. The station report is as follows: "The surface of the liquid was crusted, and considerable silt had settled to the bottom of the jar. The shells of the eggs which were sunken in this silt, appeared very fresh. The exteriors of the shells were not increased in size. The whites and yolks were normal in appearance. The whites beat up nicely, but had a slightly saline taste. Several used as dropped eggs appeared to be nice, but had a slightly sharp taste. This old-fashioned method of preserving eggs is thus again proved effective."

LOW RATE EXCURSIONS.

The Missouri Pacific Railway and Iron Mountain Route will sell round trip tickets to points in Texas and Louisiana for \$20.00 from St. Louis and \$25.00 from Chicago on the first and third Tuesday of each month. Proportional low rate will apply from other points; also one fare plus \$2.00 to points in Indian Territory, Arkansas and Missouri, and \$25.00 from Chicago to Pueblo, Colorado Springs and Denver with limit of Twenty-one days except to points in Louisiana, Arkansas, Texas and Indian Territory which are limited to thirty days, stop-overs going and returning.

Mexico: Less than one fare for the first and third Tuesday. On certain dates, one fare, long limit, stop-overs going and returning.

California: One fare for the round trip on sale certain dates.

Hot Springs, Ark.: Commencing June 1st to September 30th, one fare plus \$2.00, good thirty days, on sale daily.

Remember the Missouri Pacific Ry. and Iron Mountain Route reaches the principal points in the above named states without change of cars.

For descriptive literature and other information, address Ellis Farnsworth, D. P. A., 136 Clark St., Chicago, Ill.

SUMMER VACATION IN COLORADO.

LOW RATES VIA ROCK ISLAND LINES. Colorado, as a place for recreation, is the choice of many thousands of summer tourists.

Colorado is a land of clear, pure air and golden sunshine. It is a land of sparkling mountain streams and glassy-surfaced lakes. There are more enjoyable things to do, more grand sights to see in Colorado than any other place under the sun.

From June 1 to September 30 Rock Island Lines will sell summer tourist tickets at rate of \$21.75 from Des Moines, Iowa, to Denver, Colorado Springs or Pueblo and return. Return limit October 31. July 10 to 15, inclusive, the special round-trip rate of \$19.25 from Des Moines, Iowa, is effective.

A DURABLE ROOFING

One which perfectly excludes water and wind, which is easy to lay, and lasts longer than others is the kind of roofing you want. Shingles are high priced and getting higher every year. Tin rusts. The best roofing is that made of felt and asphalt—but there is a great difference in how this felt and asphalt is combined. In

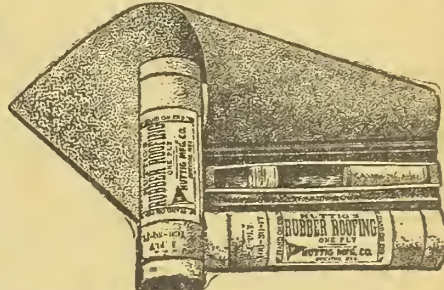

Huttig's Rubber Roofing

the felt is thoroughly saturated with Trinidad asphalt—more thoroughly in fact than any other having 150 per cent saturation as compared to 104 per cent in the best brands of other roofing. This thorough saturation makes Huttig's Rubber Roofing non-absorbing, impervious to frost, and a non-conductor of heat and cold. Keeps buildings warm in winter—cool in summer. Once laid, there is no deterioration or necessity for repairs for years. Anyone can lay it, as nails, caps and cement are packed in each roll. We make this roofing in four grades as to weight, but all of our highest quality.

WE WANT YOU TO KNOW ABOUT OUR ROOFING

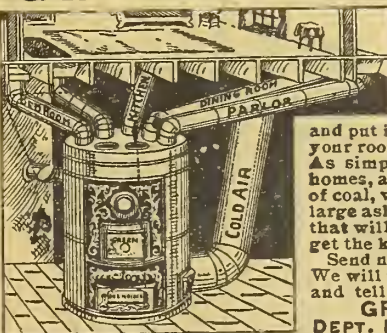

You can use it not only for roofing, but also for the shies as well. Don't do any building this year until you investigate this roofing. It's sold by the best lumber dealers everywhere. Don't let your dealer give you something else "just as good." Insist on seeing Huttig's Roofing before you buy. If it isn't sold in your town write us for sample, and we'll see that you get our goods. We'll be glad to tell you about it and its uses. Address,

HUTTIG MFG. COMPANY, MUSCATINE, IOWA

It comes in rolls with caps, nails and cement inside. This is it.

GET RID OF YOUR STOVES.

The Harvest Will Soon be Over. Are you going to be comfortable with a furnace, when you read, or roast your head and freeze your feet beside a stove? Get a

GREEN FURNACE

and put it in your cellar out of the way. You save the dirt in your rooms, and get the space which your stoves now occupy. As simple to operate as a stove. Used in 2300 Des Moines homes, and more going in every day. Economical in the use of coal, will last almost a life time if properly cared for, have large ash pits and long smoke travel. Don't buy something that will make you want to swear every day for ten years, get the kind that satisfies.

Send us your name to-day, also the name of your dealer. We will tell you how and where to get a GREEN FURNACE and tell you all about it. Address

GREEN FOUNDRY & FURNACE WORKS, DEPT. H. DES MOINES, IOWA.

Reference, Any Bank or Business House in the city. CONSULTATION FREE Drs. Fellows & Fellows Co. Write if You Cannot Call. 323 W. WALNUT ST., DES MOINES, IOWA

sive, the special round-trip rate of \$19.25 from Des Moines, Iowa, is effective.

This latter rate is authorized on account of the Elks' Annual Meeting at Denver July 16 to 21. Tickets limited to return to August 20.

Very low rates will also be in effect to Glenwood Springs, Colo., Salt Lake City and Ogden, Utah, Yellowstone National Park and to the Pacific Coast, with cheap rates for

side trips to nearby points of interest en route.

New and improved train service via the Rock Island is an important feature for the Colorado traveler to consider.

Full details of rates, routes, service and any information desired will be gladly furnished by the Rock Island Ticket Agent at 423 Walnut St., Des Moines, Iowa. Geo. E. Kilne, C. P. A.

ADVERTISING NOTES.

Central Missouri farms located in Callaway county are advertised for sale by Mr. W. E. Jameson, of Fulton, Mo., on page 11 of this issue. Write him for catalog, which will be sent free.

We are in receipt of the 1906 catalog of the Omaha Commercial College. It is quite out of the ordinary in its character and construction. Besides college information and views it contains a number of beautiful half-tone engravings of Omaha street scenes and a fine bird's-eye view of the city. This attractive little book should prove interesting to both young and old people.

Mr. A. Edgar Davis, of Lincoln, Neb., is advertising in our real estate column. He is reliable in all ways and his dealings are straightforward. He is in a position to sell your land or business, as he co-operates with 1,500 agents. His dealings go to every state in the Union. This thorough system has made him very successful. This is the only system where quick sales can be made. Look up his advertisement on page 11 and write him at once.

A well-drained 150-acre farm located in Buchanan county is offered for sale by Mr. E. C. Hesner, of Dundee, Iowa, in his advertisement on this page of our paper. There are a large house, barn and good outbuildings on the place, which is situated in a good neighborhood, only two miles from town. Mr. Hesner says that the farm is a No. 1, and all right in every respect. It has good soil and at the price at which it is offered it ought to sell to the first man wanting a good farm.

If you are looking for a farm you can surely find one to your liking by investigating those farms offered by the Western Farm Land & Realty Co., of Kansas City, Mo., whose advertisement will be found on this page of this paper. They have farms located in several different states and are prepared to give you good lands at a very low figure, both in improved and unimproved lands. A few of the many bargains they have to offer you will find contained in their advertisement this week, which do not fail to read, and when writing mention this paper.

The advertisement of the Dutch Heave Remedy Company, of Perry, Iowa, appears on page 8 of this issue. They are offering for \$2 a package of medicine guaranteed to cure any case of heaves or money refunded. Mr. Geo. Alvorn, a resident of Perry, used this remedy and was so well pleased with it that he gave them the following testimonial: "I gave the Dutch Heave Remedy according to directions which I received from you last fall, and my horse is cured of the heaves. I don't think anyone having a horse that has the heaves can afford to have a heavy horse when \$2 will cure it, as any good horse that has the heaves is worth from \$25 to \$50 more when cured. I heartily recommend the Dutch Heave Remedy to anyone having a heavy horse."

The announcement, appearing on page 11 of this issue, in regard to the productiveness of Texas farms of the Western Realty Company, of Stratford, Texas, will be found of interest. This company have several thousand acres of land located in Sherman county, Texas, which is an ideal stock and grain country. They will sell in tracts to suit the purchaser, and in many cases can make favorable terms when the buyer is not prepared to pay spot cash. Alfalfa, Indian corn, wheat, oats, rye, melons, vegetables, fruit, millet, maize and kafir corn are good yields in this section. Land can now be had at from \$5 to \$15 per acre, according to the improvements and distance from market. The above firm, however, expect to see prices increase 100 per cent within the next year. Those of our readers who are interested, either in a speculative way or are considering the advisability of changing the location of their home, should write the above company, asking for circulars and other information.

CULTER & PROCTOR STOVE COMPANY'S EXHIBIT AT IOWA STATE FAIR.

One of the most interesting exhibits at the Iowa State Fair this year will be that of the Culter & Proctor Stove Company, of Peoria, Ill., manufacturers of high-grade steel ranges and heating stoves. A cordial invitation is extended to all readers of The Homestead to inspect the exhibit by this firm. Do not overlook this exhibit, as the opportunity is seldom given to see this line of stoves in operation. Look up the announcement on page 9 of this issue and be sure to visit this exhibit at Iowa State Fair.

A BOOK EVERY READER CAN GET. "HOW TO LAY ROOFING," TELLS HOW TO SAVE MONEY AND REDUCE INSURANCE RATES.

The Homestead is pleased to announce to its readers that there has just been published by the Heppes Company, 2401 Fillmore St., Chicago, a little volume telling how to put a fire-proof roofing on any building, how to save money in roof construction, how the roof affects the insurance rates, how to get an acid and water-proof roof, etc. This book is written by Mr. O. A. Heppes, who invented several of the roofing materials now on the market, but who five years ago perfected one of his own, which is probably better than any other now made. This booklet tells how to measure a building so as to

know just how much roofing material will be required to cover it, and all the readers of this paper have to do is to write to the Heppes Company, 2401 Fillmore St., Chicago, and say, "I want the book that tells how to lay a roof." Be sure to give your name and complete address. If you live on a R. F. D. route, give the number.

A GOOD IOWA STOCK FARM FOR SALE.

On page 11 will be found the advertisement of Mr. Frank Bissell, of Dexter, Iowa, who offers to sell a splendid Iowa farm, located about two and a half miles from one of the best towns in the state. The farm comprises 240 acres, 120 of which are as fine as there is in the state of Iowa. The balance is a little rolling and rough; seventy acres in corn, thirty in oats, thirty in meadow, balance in pasture; some timber, fifteen acres fenced hog tight; well watered, windmill and tanks, seven-room house, two barns and hog shed, and located on main traveled road. Price \$60 if taken soon. Write Mr. Bissell about this great land bargain at once and please mention this paper.

CONTAGIOUS DISEASES AMONG HOGS.

Every man in the central West who raises hogs has a constant dread of cholera or swine plague. "I would keep twice as many sows as I do at present if I were sure that disease would not strike my herd," is the remark of almost every man you meet. Those who have learned to use a good germ and lice destroyer like Zenoleum no longer dread cholera. By dipping hogs at regular intervals and by spraying yards and disinfecting mud holes with Zenoleum the common diseases among hogs may be practically stamped out. Hog quarters should be sprayed with Zenoleum several times during the summer months for the purpose of destroying lice, as well as killing disease germs. A 3 per cent solution of Zenoleum will do the work every time. All druggists sell Zenoleum.

LIKES THE CREAM SEPARATOR.

Some time ago Mr. B. W. Giles gave the following advice in Farm and Ranch: "I advise any man with as many as eight cows to use a hand-power centrifugal separator and get one of the best." To this Mr. D. Y. Zachery, of Cement, Okla., made the following reply: "I want to say that such advice as that beat me out of the use of a separator for ten years, for I never had the eight cows, and believing from all that I could find out it would take at least that many to run a separator, I had to wait; but by storing and judicious marketing a crop of fine potatoes I found myself in possession of five bales of eleven-cent cotton and no debts to pay, so decided to get a separator, though I only had four cows and one of them but eighteen months old. I got the separator the last of December and put it to work, and we sold 103 pounds of butter in January and have added four more cows now and are pulling for at least 2,000 pounds this year. After six weeks' experience I would advise anyone getting as much as four gallons of milk, if butter is the object, to use a separator. I shall never know whether I got the best make or not, as I examined several catalogs and they all claimed to have the best, but I settled on one made by the Davis Cream Separator Company (Catalog No. 118), 54 North Clinton St., Chicago, and am well pleased. We separate the milk as soon as we get it, give the separator milk to the calves and pigs and they all seem to enjoy it and keep fat with very little other food. We ripen the cream and use a barrel churn and use a dairy thermometer to get the right temperature. We work the butter well, press in a brick mold and wrap the butter in paper, and it is no trouble to sell at a good price. I also have fifteen acres in commercial orchard, so will have to depend on someone else to raise cotton."

FALL WHEAT.

The illustration below was taken from a single bunch of fall wheat grown by the A. A. Berry Seed Company, of Clarinda, Iowa. This bunch was grown from a sin-

gle grain and shows the great stooling quality of this wonderful wheat. It is the new Kharkov variety direct from Russia last year. It yielded over fifty bushels per acre in Page county, Iowa, near Clarinda, the northern part of the fall wheat belt. The millers there say that it yields 25 per cent more flour than any other kind they ever handled. There is none better in the world

LANDS AND HOMES FOR SALE

Iowa Farm for Sale

HERE is a bargain in one of the best 150-acre farms in Buchanan county, Iowa. Land very productive. Well drained; raised fine crops. Large house and barn and good outbuildings. In splendid neighborhood. Only two miles from good town. Easy terms. If you are looking for a good home at a right price, write the owner for further particulars.

E. C. Hesner, Dundee, Iowa.

IOWA FARMS

LARGEST list of Iowa Farms for sale in South Central Iowa, in the Famous Corn Belt and Blue Grass Region. Crop failure unknown. Plenty of fruit and abundance of water. Write for large 1906 descriptive list. Address, Winterset, Iowa.

J. G. SHRIVER, Winterset, Iowa.

For Sale---1,000 Acres

TO close up an estate, we will sell 1,000 acres in one body; finest pasture and farm land; located in southeastern Iowa. The farm is an ideal one for any one who wants a good stock farm or is just as good for farming purposes. To any one who can handle the whole farm we will make a sacrificing price. We also have another fine farm in southeast Iowa containing 640 acres in one body—which we will sell—regardless of value. Address, BOX 1133, ST. JOE, MO.

MISSOURI 28 MILES FROM KANSAS CITY

160 ACRES in Jackson County, Mo., and one of the best farms in the state, with a 7-room house, and other good improvements, orchard, etc. All level land, black limestone soil. Must sell. Price \$85.00 per acre. For photographs, descriptions and full particulars, see

A. J. JONES & CO., PLEASANT HILL, MO.

for seed wheat than this new, imported, highly-bred, grand wheat. They have Turkey red and Bulgarian varieties. It will be money in your pocket to get some of this splendid seed wheat. The A. A. Berry Seed Company are headquarters for seeds of all kinds; strong on timothy seed, and you will do well to get prices before buying elsewhere. Send for their fall price list, which will be sent free to all inquiring. Find advertisement on page 4.

WHY NOT BUY A GOOD FARM?

If you are looking for a farm which has the right location and which has all natural, as well as commercial, advantages you will be interested in the farm that the Inland Security Company, of Kansas City, Mo., advertises on page 11 in this week's paper. This farm of 243 acres is one of the finest in the Southwest. The Inland Security Company will be glad to furnish all information desired, and to the party who can buy it they are in a position to make most liberal terms. It will bear full investigation, for it is a money maker. Please bear in mind that it is located only seventeen miles from Kansas City stock yards. If you are interested do not wait, as this farm will not remain upon the market very long. When writing be sure and mention this paper.

SEED WHEAT.

Winter wheat has again proved to be quite a profitable crop this season and many farmers are reporting yields of from thirty to forty bushels per acre, while the crop of spring wheat has only yielded about half that amount. This being the case it would seem that winter wheat is one of the most profitable crops for Iowa farmers and should be more largely sown. The Iowa Seed Company inform us that their crop of the Defiance seed wheat is most excellent this season. They consider it quite an improvement over the old Turkish Red wheat in many respects. A sample will be mailed free to any of our readers who desire it. A postal card request addressed to the Iowa Seed Company, of Des Moines, Iowa, is sufficient. In writing them state quantity desired which you expect to use and they will quote lowest price.

AN EXCELLENT IOWA FARM FOR SALE.

On page 11 of this week's paper will be found the advertisement of Mr. Z. T. Lindsey, of Omaha, Neb., who offers for sale one of the best stock and grain farms in the state of Iowa at \$62 per acre. This farm contains 567 acres and is located in Monona county, Iowa. It is five miles from Onawa (county seat), one of the best towns in the state, and two miles from Turin, both good railroad towns. It has a good six-room house, a good barn, with brick foundation, and is almost new. The other buildings are up-to-date, and it is one of the very best stock and grain farms in the West. The soil is a deep and very rich loam, and is easily worked. The owner desires to sell at once and therefore has made the price low enough to interest anyone wanting such a farm. Write to Mr. Lindsey at once and mention this paper.

HOG CHOLERA AND WORMS.

There is now more complaint about disease and other troubles in hogs in this part of the country than has been known for years. There is some discussion as to whether or not the trouble is real cholera or if it is worms that kill the hogs. The hog owner is not interested particularly in a correct solution of this question, but he is vitally interested in saving his hogs. The Snoddy treatment for hogs is very highly recommended by a great many of the best-known breeders and farmers of this part of the country. Such men as Messrs. P. W. Peterson, Vermilion, S. D.; O. S. West, Paulina, Iowa; George Seckman, Ripley, Ill., and Dave Rankin, Tarkio, Mo., use and recommend this treatment as a real cure and preventive of cholera, a thorough and satisfactory worm remedy and a great health and thrift producer among hogs. Farmers should write to Snoddy Remedy Company, Box 852, Des Moines, Iowa, for their free book of valuable information on the care and treatment of hogs. It costs nothing to learn all about it.

I Can Sell Your Real Estate or Business NO MATTER WHERE LOCATED PROPERTIES and business of all kinds sold quickly for cash in all parts of the United States. Don't wait. Write today describing what you have to sell and give cash price on same.

If You Want to Buy

any kind of business or real estate anywhere, at any price, write me your requirements. I can save you time and money.

WINTER SEED
WHEAT

62 BUSHELS PER ACRE. That's the yield of imported "Malakoff" winter wheat. This wheat was imported by us from Russia, near the Black Sea, five years ago. We have grown and sold thousands of bushels of it. It has been thoroughly tested everywhere. It is as hardy as rye. Many experimental stations pronounce it the largest yielding, surest cropper and best quality of milling wheat grown. Seed wheat circular with full descriptions of winter wheat, rye, timothy, clover and other grass seeds mailed free with sample of "Malakoff" to all who want to make a change of seed. Write today. Address,
RATEKIN'S SEED HOUSE,
Shenandoah, Iowa.

....LANDS AND HOMES FOR SALE....

For Sale---Excellent Iowa Farm Price \$62.00 Per Acre.

A good farm as there is in Iowa, containing 567 acres, located in Kennelbeck township, Monroe county. It is five miles from Ottawa (county seat) and two miles from Turin, both good railroad towns. I will sell for \$62 per acre if taken soon, part cash and balance on time at a reasonable rate of interest. The house is a good frame house of about six rooms, brick foundation, cemented cellar, etc. The barn is large with brick foundation, and almost new, has "lean to" shed 12x32 feet. There are ample cribs, bins, etc., hay racks, good wells and windmill. The farm is well fenced and will divide into three farms nicely. The remainder is splendid hay land with the exception of 15 acres of good timber along the west line, which is the Little Sioux river. For stock or grain the farm has no superior anywhere. The soil is deep and a very rich dark loam, easily worked, no rocks, no sand. As the Northwestern Mutual Life Insurance Company of Milwaukee renewed a small loan for five years on the above described land, June 29, 1906, there can be no question as to perfect title. I refer you to any bank or commercial agency in Omaha, Neb., or Council Bluffs, Ia., as to my reliability. The farm to be appreciated must be seen. All inquiries cheerfully answered. Address, Z. T. LINDSEY, OMAHA, NEB.

COLORADO, ROUTT COUNTY, IRRIGATED RANCHES. B. L. Dart, Yampa, Col.

You Will Avoid Mortgages in the Southwest

The light shaded portions represent very fertile sections in the Southwest.

The surest way to pay off your mortgage is to sell the land you now have, take what is left, go to the Southwest and buy a farm unencumbered. Good land there costs only a small part of what land costs in your locality. You can buy a bigger and better farm in the Southwest and have no mortgage to worry you. You can do this better now than two or three years hence, so many wide-awake farmers are going into the Southwest to buy up the good land, that it will not be very long before the best of it will be gone.

Now is Your Opportunity!

You can sell your present farm—pay off the mortgage and have enough left to buy a big farm in the Southwest that will make you independent in a few short years.

The "Coming Country" Free!

The "Coming Country" is a very interesting paper published monthly and devoted to the Southwest. It will post you on conditions in the Southwest better than anything that you could read. I'll be glad to have the publisher place your name on the mailing list and send you a free copy of the paper regularly for one year. Write now to

S. G. LANGSTON, Sec'y, M. K. & T. Land Bureau, 306 Wainwright Bldg., St. Louis, Mo.

\$145⁰⁰ STEEL BALER BALES 15 TONS HAY A DAY GEM 14 x 18 FULL CIRCLE

Our Gem Hay Press is the strongest and most efficient press you can buy. It weighs 2600 pounds, while presses of this size by some other makers weigh only 1500 to 1800 pounds. Is it any wonder such presses are continually breaking down and require constant expense for repairs? Our aim is to make the lightest press consistent with good service. Every part is made amply strong for the work it is called upon to do.

To those who have not seen one of our presses in use its simplicity and ease of operation will prove a revelation.

The easy direct application of the power by means of our wonderful power-head with its nine inch trip lever arms gives us the greatest possible baling pressure for every pound of the horses' pull. We have an automatic brake device which controls the rebound of the plunger, and there is not the jar and jerk which makes some presses so hard on the team. The power-head so controls the work that an easy steady pull is all that is required from the team, and we get two haling strokes from each of their circles.

The feed opening is thirty inches, the plunger travel is thirty-eight inches, rapid at the beginning and slow at the end of the stroke, making it easy for the man to put in large charges and have plenty of time to do it. It is such points as this which give our machines an average capacity of 10 to 15 tons a day and frequent records of 18 or 20 tons day after day with the same men and horses.

Our Hay Press Book tells what our machines do, and we would like you to read the testimonials of those who have used them.

Our nearly forty years experience and constant improvement of our presses is back of our guarantee. Ask anyone who has ever used one of our presses, or who has ever had dealings with us what he thinks about our presses and our methods of doing business.

Send us your order for one of our Gem Full Circle 14x18 Steel Balers with draft for \$145.00 f.o.b. Quincy, and we will ship at once accompanied by complete outfit including feed fork, wrenches, oil-can, tie-making machine, lifting jack and full instructions how to set up and operate.

If it does not come up to our representations, you may return it and we will refund your money and pay freight.

WITH THE EDITOR.

The two men presented a marked con-
trast to each other as they sat in their
wagons exchanging remarks about the
weather and the state of the crops. Isaac
Watts was a stout, comfortable-looking
person, with a laughing eye which was
good to see. His companion was tall,
lank and grave of face—life was no
joke to him if his deep-set eyes told
truth.

"Well, guess I'll be moving on," said
Watts, gathering up the lines. "Wonder
how they'll come out at school meeting
tomorrow?"

"Anything special doing?" asked Long.
"Well, rather. They're to hire the
teacher, and everybody's wondering
who'll get the place."

"You surprise me. I thought Miss
Powell was to be re-engaged."

"I thought so, too, until just lately.
It seems Mary Allan wants the place
and has offered to take it for twenty-
five dollars less than we've been paying
Emmie Powell."

"What has that to do with the mat-
ter?"

"Why, twenty-five dollars is twenty-
five dollars, man. Thompson don't think
so. He says changing teachers is bad
for the school. He's bound to have Em-
mie Powell again this year; but Berry
is just as set on giving the place to
Mary Allan. He wants to save that
twenty-five dollars. What Akers wants
nobody knows. You see, Akers is in debt
to Berry, and he needs Thompson's in-
fluence to get that place in the county
office that he is working for. He's in
a tight place and there's no telling
which side of the fence he'll land on.
I'm quite curious to see how it'll all
end."

"This is all news to me—bad news, too.
My children swear by Miss Powell."

"Yes, Emmie's mighty popular with
the children. My youngsters are plum
crazy over her. Guess she's a fine teach-
er, too; she seems to bring the children
on well, but, as I said to Thompson,
probably Mary Allan'll get along just
as well."

"You don't mean that, for the sake
of a few dollars, you'd let Miss Powell
go, when she does such good work?"

"Yes, believe I would. I agree with
Berry; I think we should run the school
as cheap as we can."

"But, Watts, you know well enough
that cheap goods are generally dear
goods in the long run. It's almost al-
ways that way in school matters. Real-
ly, I'm surprised at you, a man as well
fixed as you are. I'm a poor man myself,
but I'm dead against cheap schools. It
is not to be expected that a slip of a
girl fresh from school herself should
know how to teach, and yet for the
sake of a few dollars year after year
country schools are given to just such
girls, and when they've served their
apprenticeship on our children and real-
ly know a little something, we turn
them off and let another greenhorn try
her 'prentice hand on our school. It's
all wrong, dead wrong. We should do
as they do in town—offer a decent sal-
ary—enough to make it worth the while
of a competent teacher to come to us,
and when we've got her we should hang
onto her, giving her a little more from
year to year to encourage her to keep
abreast with the times."

"Don't believe the district'd stand for
such doings. Folks grumble about the
school tax as it is."

"The more shame to them. Why
shouldn't farmers have as good schools
as townsfolk, I want to know? I can't
see why because I live on a farm my boy
should not have as good teaching as his
cousin in town. He needs a good educa-
tion just as much. People nowadays
can't get ahead unless they have a good
education. They're handicapped in the
race and have no chance for the prizes.
I want my children to have a fair start.
They'll have to compete with town folk
later on, and they should have equal
advantages to prepare them for the
struggle."

"I think instead of going straight home
I'll drive 'round and see Berry. I wish
you'd go along. If a dozen men who
see the thing straight would talk the
matter over with him I believe he'd see
the foolishness of changing teachers to
save money. I'll drop in on Akers, too.
I'm sorry he's in a tight place, but
he was elected to serve the district and

NO-TAR ROOF

ROOFING MADE WITHOUT TAR,
AS I MAKE MINE, WILL RESIST
FIRE. LET ME TELL YOU WHY

I INVENTED many of the good asphalt
roofs that are sold.

Five years ago I invented one of my
own that resists fire and is better than any
of the others.

Send me your name and address on a
post card, and I will tell you all about this
roof and how it secures lower insurance
rates. I will also send you a sample of it
to test, and a copy of my FREE book on
how to lay roofing with no tools but a

sharp knife and a hammer. My book also
tells why my "No-Tar" Roofing is the only
roofing that is weather, water, acid and
almost wear proof, as well as Fire Proof.

"No-Tar" won't crack in cold weather,
won't melt in warm weather, and lasts
as long as the building.

You ought to send for my book at once.
If you have any roofs that need attention,
Write me a post card today. Do it before
the matter has a chance to slip your mind.

O. A. Heppes, Secretary, THE HEPPES CO., 2401 Fillmore St., Chicago.

SOUTHWEST The Land of BIG CROPS and PROSPERITY

Are you making as much off your farm as you ought? No doubt you are
making all you can. The trouble is the land costs too much. It takes
too much money to buy a big farm, and so you are trying to make a liv-
ing on a small farm, or perhaps you are renting one and paying a good
share of what you raise, in rent. Wouldn't it be better to go where the price
of good land is so little that you can own a big farm—where every acre of
ground is working for you and all you raise is paying you good profits?

There are thousands of acres of fertile land in the Southwest along the
line of the Cotton Belt Route that can be bought for from \$3 to \$10 an
acre. This land is increasing in value each year.

See the Southwest at Small Cost

A trip to the Southwest would convince you that your best interests lay in settling
there. The trip can be made at very little expense. On the first
and third Tuesdays of each month you can purchase a round trip
ticket to any point in the Southwest on or via the Cotton Belt
Route at very low rates. Stop-overs will be allowed for you to
examine any locality you are interested in.

Write at once for free copies of books describing this won-
derful country and for full information about cost of
tickets, etc.

L. E. SAUPE, T. P. A., Cotton Belt Route, St. Louis, Mo.

FRUIT GROWING

The rich irrigated lands of the Arkansas, Grand,
North Fork and Uncompahgre Valleys of Colorado,
and the Farmington District of New Mexico, offer
exceptional opportunities for the fruit grower. Pears,
Peaches, Apples, Grapes, Apricots, Plums, Melons of
all kinds and small fruit of every variety are raised with
a greater average yield per acre—and a finer quality—
than in any other section of the United States. Mar-
kets are close at hand and the demand exceeds the supply.

The Denver & Rio Grande R. R.

"Scenic Line of the World"
reaches all the above districts and offers
special inducements to those seeking locations.
Write to-day for free descriptive booklets.
S. K. HOOPER, GENERAL PASSENGER
AND TICKET AGENT, Denver, Colo.

it's our business to see that he doesn't
forget that little fact."

HOME AND HOME MAKING.

LITTLE HELPS BY THE WAY.

Beautiful hands are those that weave
Bright threads of joy in lives that grieve;
Beautiful feet are those that run
On errands of mercy from sun to sun;
Beautiful lips are those that speak
To comfort the mourner and hearten the
weak;

Beautiful eyes are those that glow
With the light of a spirit pure as snow;
Beautiful faces are those that seem
With the very love of God to beam;
Beautiful forms are those that grace
With gentle service the lowliest place;
Beautiful lives are those that bear
For other lives their burden of care;
Beautiful souls are those that show
The spirit of Christ where'er they go.
—Rev. Dudley Chase Ahcott.

TWELVE GOOD BOOKS FOR SUMMER READING.

(Selected by Rev. Charles M. Sheldon.)
A good book is the precious life-blood of
a master-spirit enlabeled and treasured up
on purpose to a life beyond life.—John Mil-
ton.

"Counsel Upon the Reading of Books,"
Henry Van Dyke; "Virginius Puerisque,"
R. L. Stevenson; "The Gentle Reader,"
F. M. Crothers; "Great Books as Life Teach-
ers," N. D. Hillis; "Bird and Bough," John
Burroughs; "The College Man and the Col-
lege Woman," William De Witt Hyde; "My
Own Story," J. T. Trowbridge; "The Mak-

ing of an American," Jacob Riis; "Memories
of a Hundred Years," E. E. Hale; "One Hun-
dred Days in Europe," O. W. Holmes; "The
Life of Joseph Neesima," Alpheus Hardy;
"A Life of Christ for Boys," Forbush.

THE SUNRISE SONG.

El you want ter reach de Promise Lan', en
git de milk en honey,
You mus' always see de sun rise in de
mawnin'.
El you want ter hear de jingle er a pocket-
ful er money,
You mus' always see de sun rise in de
mawnin'.

Dat de way it go,
Summertime or snow—
You mus' always see de sun rise in de
mawnin'.

You got ter he a sower ef you ever want ter
reap,
You got ter see de sun rise in de mawnin'.
You mus' always see de sun rise in de
shackles er yo' sleep,
You mus' always see de sun rise in de
mawnin'.

Dat de way it go,
Summertime or snow—
You mus' always see de sun rise in de
mawnin'.

—Atlanta Constitution.

FEEDING THE BABY.

It is a bad plan to bring the baby to
the table and let him sample the various
things on it. Sometimes grandma or grand-
pa plead that he may have a bit of some-
thing sweet, and loving relatives have been
known to administer dainties to baby on

the sly, to his ultimate discomfort. Indigestion in the first days of a baby's life is often due to some dainty thus offered, or to a meal of some starchy food, as cracker or toast, water, sugar and water, or cow's milk, which the stomach cannot digest, and spoiling and poisoning is the result.

Colic or inflammation may follow, and then some grave disorders, as inflammatory diarrhea, cholera infantum, or dysentery. In the summer the latter often proves fatal in a few days, or even a few hours. It is a good rule not to give any solid food to a baby until it has teeth to chew it with.

FOR THE COOK.

Spiced Rolls.—Roll a piece of bread dough to the thickness of half an inch; brush the top with melted butter and cover with fine sugar and cinnamon; roll as jelly cake; cut an inch thick and lay in pan as biscuit, close together; allow to rise and bake twenty minutes. These rolls are nice to serve with tea.

Chicken Turnover.—Place a good-sized young chicken in sufficient water to cover and boil until tender enough to slip the bones from the meat; season with salt, pepper and a little celery; make a light short cake in a circular pan, split the cake, butter the lower half and arrange the chicken on it; thicken the gravy with a little flour; add a tablespoonful of rich cream and a lump of butter; pour over the chicken on the lower crust and place the top section of the cake over all.

Green and White Cake.—Cream together one cupful of butter and two cupfuls of sugar; add one cupful of milk. Sift four cupfuls of flour with one heaping teaspoonful of baking powder and heat in alternately with the whipped whites of six eggs, stir in the juice of one lemon and half the grated peel. Dip out one cupful of batter and add to it a little spinach juice, also a little more flour. Put the white batter in the cake tin and variegate it with the green. Bake in a steady oven. To obtain the spinach juice put spinach leaves in a double boiler with no water in the inner vessel and cook until the juice is drawn out. Squeeze the leaves in a cloth and use the juice from them.

Quick Lemonade.—Lemon sirup ready for lemonade at a minute's notice on a hot day is a convenience. Melt one pound of sugar with water enough to keep it from burning and boil it until it spins a thread. Turn into this the juice of a dozen lemons and the thin rind of four lemons and heat the mixture thoroughly, but do not allow it to come to a boil. Strain and when cool bottle. A tablespoonful is sufficient for a tumbler of lemonade.

AMONG OURSELVES.

"I want to enter a protest against the remarkable statements made by Sarah Belle Mead. She says, 'The farm women do long for restful, lovely homes, but the head of the family does not.' It must have been a remarkably poor class of farmer men that it was her misfortune to be among. The vast majority of farmers are not of this class, I am sure, and even in those isolated cases if women really 'long for restful, lovely homes' why don't they go to work and make them? Is it beyond the art or power of woman to plant a tree here, a rosebush there, a few vines to run up the porch, and by raising chickens or some other method get a nice hammock to hang on that porch or, better still, under some trees, if you have them? Then a very small sum of money will buy a rope for a swing for the children, and it's ten to one the 'head of the family' would be very proud of the little woman who had accomplished so much without his aid. Among the majority of farmers it is only lack of time, not inclination, which makes them negligent about such things. I have just been reading the letter about summer days upon the farm, but her plan of work did not seem to solve the problem for me. I do not know how large her family is, but she mentioned three girls and a boy. That is just the extent of my family. A boy of thirteen and three girls aged seven, five and two years. Now, if in addition to the work she mentioned you add the work in the garden, caring for the poultry, cleaning hen houses, shutting up and caring for perhaps a score of sitting hens, etc., when that same woman must go to the garden and pick peas, and beans and dig potatoes, then in addition milk five cows night and morning and separate the milk from thirteen cows and feed ten calves in the morning (husband does the separating at night), you will see that there are not hours enough in the day to accomplish all; it takes several hours of the night also. I am not complaining, but only wanted to tell 'A Farmer's Wife'

there are some of us who could not find any leisure, no matter how hard we try. I will close for fear of crowding someone else out."

Almost every week I receive letters from members of the circle who after holding back for years timidly rise to their feet. Here is Mrs. Belle Larsen who has kept silent through a sense of inability to say anything of interest, giving us such a fine letter that we feel the circle has missed no one knows how many good things. I tell you, friends, if whenever a letter appeals to you, you would seize a pad and pencil and jot down what is in your mind, just as if you were talking to your John or a neighbor, and let us have the effusion, our circle meetings would gain immeasurably. Please act on this hint this very week some of you who have never written. What do you think of the woman beautifying the yard? And, don't you think Mrs. Larsen's day is over full? But, come to think of it, Aunt Ruth has been thinking along this line and she comes with questions which I am anticipating:

"I have been thinking lately of women, and there are several questions that are worrying me: First, should mothers allow their daughters to work in the hay field, hoe in the garden and do general out-door work? I say, no; but I am sorry to say I see women doing this very work. Women are homemakers, not haymakers and dairymen. I really pity the poor woman that is living such a life of drudgery. Are there any women that enjoy such work? I don't see why they should; it is man's work. I blush with shame when I see a delicate woman working in the hay field or out in the mud and rain, pailing the cows. Women had far better be playing basket ball or practicing on the piano. Now, girls, don't learn to do this kind of work and it will never be expected of you, and the fathers and lovers will respect you more and love you better. I am speaking from actual experience. If there isn't enough men to do these chores, let them go undone. Now, the next question that puzzles me is why so many tired, overworked women imagine they must meet their husbands or menfolks of the house with a basin of warm water when they come from the field to dinner. Couldn't the men get the water just as easy as the women? Don't understand me to say that I do that way; I never did wait on men like that, and I never will. I do try to have the water pail empty, though, when they come in. I have been to places and have seen young men come in the house and order Sis to get a pail of fresh water, and the mother would compel Sis to get the water, saying Brother was tired; he had been plowing. As if Sis hadn't been working hard all forenoon. There was one more thought, but I fear I have already been tramping on someone's toes."

What about these questions? They appeal to a goodly number in some parts of the country. Suppose we talk about them. And, although, these are extra busy times for fathers and mothers, I wish we might have their views on this matter. If they cannot, or will not take time to write we might still learn what they think. Instead of eating in silence or talking about odds and ends talk about this at table, get the men to express themselves, and then put what they say on paper.

Replies to the questions Mrs. McKerlie asked, or comments upon them, continue to come in. Mrs. Aggie Miller takes up the gauntlet upon behalf of husbands who are misjudged, she thinks:

"I believe there are a great many married women (readers of the Home Department) who would much rather have had Mrs. McKerlie say 'some men' instead of

Good Natured Tools

It is not necessary to force Keen Kutter Tools. Keen Kutter bits, for example, work quickly and easily in any kind of wood. Lips are long, strong and perfectly tempered, adding years to the life of the tool. Keen Kutter Tools like hard work. The edged tools never lose their temper—handled tools never work loose or fly off—hammered tools keep their faces straight.

KEEN KUTTER

"man." First, I wish to vindicate the men who work for us, love us and trust us. And if those three terms may not be applied in most cases it is because they are unmerited. I truly believe a man will re-

fect good treatment oftener than a woman. She too often takes all as her due, even resorting to her most popular weapon—hysterics—to command them, which truly and surely will bring about the state of affairs described in Mrs. McK.'s letter. Some fifteen years ago I had the pleasure of hearing Miss Susan B. Anthony speak in Newton, Kan. She ridiculed the women who would stay at home and be tied down by children. She thought a woman's highest ambition should be to get out and fight for suffrage. I think a woman's highest ambition should be a happy home and the love and confidence of her husband and children. The only vote a woman ever cast that amounted to anything was when she cast it for prohibition, and I want every mother and father, too, for that matter, to answer this question in their heart: 'Who has done the most for prohibition, the mother who has raised the man who never takes a drink, or the old maid who casts her vote for prohibition? I have only respect and pity for Miss Anthony; respect, because I believe her to have been honest in her work; pity, because she lived a long life all alone, with no husband or children, thereby missing woman's greatest natural blessing.'

Public speakers are frequently misunderstood and misquoted. Those who are acquainted with the opinions and utterances of the late Susan B. Anthony will be slow to believe her guilty of holding motherhood up to scorn, although her answer to the question propounded by Mrs. Miller might not be quite to the liking of old-fashioned women. If suffrage were not a tabooed subject in our circle I should propound a question to supplement that asked by Mrs. Miller. I should ask whether it is better for a woman to so train one boy that he escapes the perils of the drink traffic or to lend herself to bringing about better conditions for

The above illustration shows the Ziegler Corn Harvester with seat and dropping device. It is made by the New Process Manufacturing Company, of Lincoln, Kan., and sells for the sum of \$14. The same without seat or dropping device sells for \$12. This machine has been on the market for some time and its work has been found eminently satisfactory. A neat folder has been prepared by this company and will be sent upon application to any subscriber of this paper. This folder contains a number of illustrations and also numerous testimonials in which the name and address of farmers who have used this machine are given. The price of this harvester can be saved in the cutting of only a few acres of corn, when the cost of hand labor is taken into consideration. Address communications to the New Process Manufacturing Company, Lincoln, Kan., and state that you saw the advertisement in this paper.

CONGO

The best Ready Roofing made. Its wearing qualities have never been equalled.

It is made from a non-volatile composition that arrests decay and renders the roofing absolutely waterproof and practically indestructible.

Put it on one of your buildings as a trial, and you will cover all the others with it before another season passes.

Write for name of nearest agent and free sample.

Buchanan-Foster Company,
442 Chestnut St., Philadelphia, Pa.

ROOFING

all boys—and yet that is rather a foolish question since the one woman can, and frequently does, do both. But we approach dangerous ground. Let us hear John's Wife, who comes seeking our advice on an important matter:

"John and I are now on the shady side of fifty. For thirty years we have pulled together on the old homestead and our efforts have been well rewarded. We are not rich, and we are, too, for we have plenty and some to spare, and the half dozen boys and girls, equally divided, who call us father and mother, are in themselves untold wealth. We planned to give them all a good education, for we think that whatever talents children may possess will be increased by an education—the more they know, the better able they will be to choose a life work suited to their taste and ability. Charles, the eldest, has chosen the law, and people say of him, 'He is not a lawyer only, but a Christian gentleman also.' The ministry attracted our second boy, and we are glad it is so, for many souls have been uplifted and brought into loving relation with the Almighty Father through his labors. Mary, the eldest girl, married a neighbor's son, and with her little ones around her feet her life is much the same as mine was, only she enjoys the many advantages which the passing years have brought to the farmer and his family. Jeanie graduated this June, and before another summer she will be the wife of a college professor. James, aged eighteen, and Nellie, aged sixteen, have finished the high school course, and if they receive a college education, like their brothers and sisters have, they must be sent away to school. If we send them away we will be alone in the old home, with only hired help to depend upon, and John and I are getting slow, and work that once was easy is now hard. We love the old place; it is like a part of our very lives. Shall we try to run it with hired help, or build a tenant house and lease the ground to a tenant while we live in the farm house, or shall we sell the farm and move away, or sell the stock, tools, and machinery and move to the nearby town, where we can oversee and keep up repairs on it, or move to the city and make a home for James and Nellie while they are attending the university? John and I are lying awake nights trying to study out this problem and decide what is best for us to do before another school year opens. In the years that have gone by the Home Department has helped us solve many knotty problems. Won't you help us now?"

FIELD NOTES.

Messrs. Wurtzel Bros., of Beemer, Neb., claim October 8th as the date on which to hold a sale of Poland China swine.

Mr. I. C. Welch, of Bedford, Iowa, has a good crop of Duroc Jersey pigs for sale and he is making special prices to those who order right away.

Mr. S. W. Harr, of Riverside, Iowa, is offering Scotch terrier puppies from recorded parents for sale in his advertisement which appears on page 18 of this issue.

Remember Mr. G. L. Belcher's sale of Short-horns and trotting-bred horses will be held at Walnut Ridge Stock Farm near Carrollton, Mo., on Wednesday, August 8th, next week.

Two fine stock farms located in Franklin county, Iowa, one containing 300 and the other 240 acres, are offered for sale on easy terms by Mr. A. L. Stuntz, of Greene, Iowa, in his advertisement that appears on page 10.

Look up the new advertisement of Messrs. McNeil Bros., of Bowen, Ill., on page 18, and either write them or inspect their herd. They can supply the most discriminating buyers of Duroc Jerseys at reasonable prices, as they have one of the best herds of the West. Kindly mention The Homestead when writing.

Mr. Geo. Allen, of Lexington, Neb., starts his Shropshire advertisement in this week's issue and he has a grand lot of rams for sale. The Allen flock has been one of the leading winners in America and no one has better sheep than he. If you want a ram or a few good ewes it will pay you to write Mr. Allen. See page 18.

Mr. Harry Riffin, of Petersburg, Ill., has an announcement on page 18 of this issue which will be of interest to Duroc breeders. The International champion, Gold Finch, heads the herd and the female portion is unusually good. The spring crop of pigs by Gold Finch will please discriminating buyers. Write your wants, kindly mentioning The Homestead.

Mr. W. A. Rankin, of Carson, Iowa, starts his Duroc Jersey advertisement with this week's issue on page 22. He has a grand lot of pigs this year, sired by Ohio Chief and a son of Gold Dust Jim, besides a number of litters by other well-known boars. He would be pleased to hear from anyone wanting a good boar pig, as he can fill his order and do it to the satisfaction of the purchaser.

Messrs. H. B. Moats & Son, of Villisca, Iowa, are with us again this season with a lot of high-class Poland China pigs. The most of this season's crop are sired by Shamrock 34571, a son of Perfect Perfection. This great breeding boar is a grandson of Chief Perfection 2d on both sire and dam's side and he is one of the best breeding boars ever used in the Moats herd. The present crop of pigs are mostly out of Perfection E. L. and G's Perfection dams. They also have pigs by the last named boars. Those who are looking for herd headers of

PILES

FISTULA--NO MONEY TILL CURED

MR. E. O. WASSER, OF DEEP RIVER, IOWA, WRITES: "You can have all kinds of testimonials from me, for I feel very grateful to you for curing me of Prolapsus. I am now sound and well. Think I was with you about three weeks under treatment."

All diseases of the rectum treated on a positive guarantee and no money accepted until patient is cured. Send for free 352 page book, a treatise on rectal diseases and hundreds of testimonial letters, valuable to anyone afflicted. Also our 132 page book for women. Both sent free. high quality can get them of the above firm. Write your wants to them and they will quote you prices and tell you just what they have.

Mr. Henry Dorr, of Remsen, Iowa, one of the foremost breeders of Poland Chinas in northwest Iowa, is on deck again this season with a grand lot of fall and spring boars which he is ready to price and to ship at any time. He is one of the breeders that raise good, practical Poland Chinas, of the money-making kind. He has the quality, as well as size and bone, and he prices them within reach of all. If you send Mr. Dorr an order you will be pleased with what he sends you.

Mr. J. T. Elerbeck, of Beatrice, Neb., starts an advertisement with this issue. This gentleman breeds the large, roomy type of Poland and his hogs have plenty of quality with size. The herd boars, Logan B., by Logan Chief, and King Do Do Jr., by King Do Do, are both good breeders. Each sire has a string of pigs that are worthy of notice. Any breeder in need of good strong Poland to add to his herd to give more size and vitality could not go wrong by looking into this herd.

Mr. W. J. Wendt, of Marcus, Iowa, has 200 Duroc Jersey pigs to select from, and the man that cannot get a herd proposition from among the number is indeed hard to please. These are sired by Wendt's Choice, Lottie's Top Notcher. He also has pigs by a son of Crimson Wonder and other good boars. Mr. Wendt has always priced his pigs within reach and his stock has always given good satisfaction. He can sell you a boar and a few gilts not akin, and he don't ask the earth for them, either. Try him with an order.

Mr. W. W. Wheeler, of Harlan, Iowa, writes: "I have decided to sell my Poland China herd boar, Surprise Wonder 5th 103067, bred by Mr. Peter Mouw, of Orange City, Iowa, and farrowed November 20, 1904. He was sired by Surprise Wonder 4th 59893 by Surprise Wonder 3d 50633 by Surprise Wonder 41563. Dam Miss Longfellow 223586 by Chief Price 61861 by Grand Chief 28013. This is a large, massive fellow in good, thrifty condition and a great sire. I have a splendid crop of pigs from him and if anyone wants size and bone they can get it in Surprise Wonder 5th."

Mr. A. F. Graves, of King City, Mo., claims October 20th for his sale of Poland China boars and gilts. Mr. Graves' Lyndale herd has not as yet been brought prominently before the public, but the lovers of good Poland Chinas who like the easy-fleeting sort that raise big litters and are bred right will find them in the Lyndale herd. Over 100 head of spring pigs have been saved and for quality, growth and usefulness they are great. Some desirable fall males are being priced worth the money. Write Mr. Graves if you want a fall male and kindly mention this paper.

Elsewhere in this issue will be found the announcement of Messrs. Mack Stevens & Sons, of Iowa City, Iowa, who are breeding the choicest strains of large, heavy-boned Chester White hogs, possessed of great length and heads that are short and broad, indicating great feeders. This firm have been very successful in saving a large per cent of the pigs farrowed, and can on this account make attractive prices to the prospective buyer. Their trade through this journal has in the past been eminently satisfactory. This season finds them in position to furnish better pigs than heretofore.

Those who are looking for Ohio Chief pigs will find them in the herd of Messrs. A. L. & U. S. G. Lynch, of Mt. Airy, Iowa. This firm first came into prominence because of the fact that they bred Ringleader, one of the boars that heads the herd of Mr. L. L. Overholser. Ever since they have endeavored to breed the good ones and have therefore purchased some of the very best brood sows. They now have eighty-five pigs on the place sired by Ohio Chief, Alix Pride, Iowa Lad and Brilliant Advance. The boys have one of the best lots of pigs ever raised in their county and they are pricing anything they have. They have a good litter of Ohio Chief pigs. First come first served. If you want one of these write them at once and mention The Homestead.

The veteran Berkshire breeder, Mr. T. J. Congdon, of Pawnee City, Neb., is again out with as strong a lot of this breed as he has ever raised. This herd of hogs has won recognition all over the country. The owner is one of the most reliable men in the hog business. His last dealing has won him many new customers. The herd is well represented with the blood of the cream of the best families. The great show boar, Charmer's Duke 20th, is still doing service in this herd. This hog has been shown at the Nebraska State Fair a number of times and is yet to be defeated. The Congdon herd has furnished many good herd headers and many are noticeable in the herd at this writing. You can feel safe in placing a mail order with this gentleman. Look up his advertisement on page 18 and write him.

On page 21 of this issue will be found the card of Messrs. Hanks & Bishop, of New London, Iowa. Nothing but red hogs at this place, and only first-class individuals at that. The writer recently saw these pigs and pronounced them good ones. Messrs. Hanks & Bishop never push their pigs, but allow them to come on gradually, as is best, to produce vigorous, healthy animals. Growth and bone are the chief essentials to all good stock, and in this they have been very successful. Boars are now ready for sale, sired by the following individuals: Proud Advance, Top Notcher Again and others of merit. Top Notcher Again is the boar that won first and championship at the Indiana and Illinois State Fairs in 1903. That is enough said. His get are just what they ought to be. Better look over the card and write for any other information desired.

These breeders will be ready to ship at any time, satisfaction guaranteed. Kindly mention The Homestead when writing them.

The Ardmore Stock Company, of Ilostein, Iowa, have about 150 Berkshire pigs on hand this year sired by Royal Majestic, St. Patrick of Ardmore, Royal Improver and Premier Duke. They are now hooking orders for boars and sows and any of our Berkshire friends who want a good boar or a few good sows will do well to get their order in as soon as possible.

With this issue appears the advertisement of Messrs. Wm. Ray & Son, DeLance, Iowa, breeders of the up-to-date Poland Chinas. They have about forty-five boars for sale, ranging in age from spring pigs to tried herd boars. They have pigs by the World's Fair boar, Meddler, and by the Iowa State Fair sweepstakes winner, Impudence, as well as a number by Dakota Chief 2d, R.'s Perfection and Perfection Grand. If you want a Poland China boar it will pay you to correspond with Messrs. Ray at once. Their prices are within the reach of everyone, and they have some right good boars for sale.

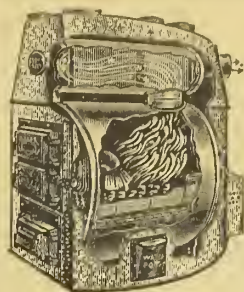

Wineland Durocs have made a very good growth and are now ready for shipment. Mr. H. C. Young, of Lincoln, Neb., owner of the above herd, has instructed us to announce that the pigs will be priced worth the money. The herd is headed by Auction Boy 3d, Queen's Won't Be Beat, Improver Lad by Improver 2d, and Long Wonder by Crimson Wonder. The crop of spring pigs will number about 120 in all. These are well bred, as you will see by looking up his advertisement on page 21. Wineland farms are located a short distance from Lincoln, Neb. Visitors are always welcomed to this farm. Write Mr. H. C. Young.

Mr. U. G. Davidson, of Manson, Iowa, writes that he has for sale a gilt with a litter of five pigs by Crimson Wonder I Am. These pigs were saved from a litter of nine farrowed July 13th. The gilt is a granddaughter of Orion and is a very fair individual. The first \$45 takes her and litter, and any one of the pigs will bring the price by January 1, 1907. Mr. Davidson also has a fall yearling, another granddaughter of Orion of splendid individuality, bred to Crimson Wonder I Am for August farrow, for sale at the low price of \$50. Crimson Wonder I Am was the sweepstakes boar at the Iowa State Fair last year, and is without doubt the most typical living Duroc Jersey boar. Write Mr. Davidson in regard to these sows and mention The Homestead, or better still, visit his herd and see them. See advertisement on page 22.

With this issue begins the Duroc Jersey advertisement of Mr. Wm. Malcolm, Worthington, Minn. Mr. Malcolm's herd is one of the best in Minnesota, and last year he won eight first and eight second premiums at the Minnesota State Fair, as well as all the sweepstakes. He also got second on herd bred by exhibitor, all herds competing. He has 110 pigs out of Malcolm's Model, Proud Advance and Tolstoy sows. He has used a grandson of old Top Notcher, and a son of Crimson Wonder I Am at the head of his herd. Mr. Malcolm's prices are right and he can be depended upon to send you good stuff. We take pleasure in not only recommending his herd, but also in recommending the man. He will send you just what you order or return your money. Write him if you are in need of a boar or a few good sows.

Mr. M. E. Slemmons, of Iowa City, Iowa, who has for many years sold all his Cruickshank and Scotch bulls through The Homestead, now changes his announcement, as will be seen by reference to page 20. He has three exceptionally good Scotch bulls for sale. Two in particular are choice and all are red in color. Two of these bulls are Orange Blossoms, but the one eighteen months old is an Avalanche. The older one is a fine prospect for a choice herd bull and is well enough bred to be used on any herd in the land. He is also a fine-shaped bull, and has a good bull's head. The September calf is no less than a show calf in any company, and it has been some time since Mr. Slemmons produced his equal. The third bull is solid red and is also an Orange Blossom, but is not quite so good as the two previously mentioned, hence will be sold for less money.

Mr. G. S. Hamaker, of Pawnee City, Neb., a Poland breeder of several years' experience, has one among the good bunches of pigs seen by the writer this year. Mr. Hamaker has not been slow to appreciate the growing demand for the larger type of Poland, the kind that are prolific, heavy boned and easy feeders. Several years ago this breeder, like many others, quit the Poland Chinas when the smaller type of that breed was at its height of popularity, turning his attention to the breeding of the large Berkshire, discarding these a few years later in favor of the Chester White, which he successfully bred for a few years, but finally discarded and returned to his first love, the Poland China, of which he has always been an ardent admirer. Inspecting this herd one will at once recognize the skillfulness of the breeder, both as a breeder and a feeder. The herd boars in the herd are Brilliant Chief 40743 and J.'s Chief 41061. Brilliant Chief is a fall yearling, a large, massive fellow, heavy boned with lots of quality and nice head and ear. He is a descendant of such well-known boars as M.'s Black Chief, Corwin Medium and Midway Chief. J.'s Chief is by Johnson's Chief and out of a sow by Major Blain by Blain's Tec. This breeding is too well known to need further comment here. J.'s Chief was recently sold at a long price to Mr. Bales, of Martinsburg, Neb. If this fellow was fitted for show he would stand a good chance of duplicating the honor of his sire. These two boars are

sires of the bulk of the pigs. Although we saw some good ones by King Do Do by Expansion. The spring crop of pigs numbers about seventy-five head, mostly of March farrow. The dams in the herd are by such well and favorably-known boars as Johnson's Chief, Major Blain by Blain's Tec., King Do Do by Expansion and Blain's Tec. 2d, and others. If you are in the market for good Poland Chinas of the larger type call on or write Mr. G. S. Hamaker, at Pawnee City, Neb.

Mr. S. I. Welch, of Cherokee, Iowa, begins his Duroc Jersey advertisement in The Homestead this week on page 22, and has about ninety pigs which he will take pleasure in pricing at any time. His pigs are sired by Baughman, a grandson of Proud Advance, Péciles Jr., Cronji Boy and Lottie's Top Notcher. He also has two litters by Dandy King out of a Leo Tolstoy sow. One of his best litters is by Baughman, among which are some exceptionally toppy pigs. Another good litter is by Cronji Boy. There were ten farrowed and nine raised, and they are all that could be desired. These pigs are all cherry red, and we have never seen as good a bunch of pigs on his farm as he has this year. Mr. Welch is a popular-priced breeder and always intends to price his pigs so that the other fellow will make a dollar on them. Write him if you want a boar or a few good gilts.

CRUICKSHANK BULLS FOR SALE.

If any of the readers of this paper are looking for a Short-born herd bull they had better write to or go and see Mr. C. C. Norton, of Corning, Iowa. He has a splendid lot of young bulls sired by Imp. Bapton Admiral and Banker's Victor that are good enough to head any herd in America. If it is a high-class bull you are after here is where you will find it. Write Mr. Norton or go and see him at your earliest convenience.

LONG'S BIG-BONED POLAND CHINAS.

Mr. F. H. Long, of Manning, Iowa, begins his advertisement in this week's Homestead and is offering a good bunch of big-boned and stretchy boars for sale. These are nearly all sired by his 900-pound boar, Monarch Jr. 37630, and are out of his largest brood sows. Mr. Long breeds the "big fellows" and if our readers want that kind they will find them in his herd. Write him and tell him what you want and if you want the kind that win over the scales he has them. See page 18.

A VETERAN DUROC BREEDER.

Every breeder of Duroc Jerseys should know Mr. Thos. Bennett, of Rossville, Ill. He was the man who recorded the first Duroc Jersey hog in America and has been one of the best breeders of the Duroc Jersey in the corn belt. From this herd many of the greatest show and breeding boars of the breed have descended. Mr. Bennett has always bred good stock and the spring crop of pigs, numbering about 150 head, are of the best and most useful type to be found anywhere. Breeders or farmers wanting a good boar or some extra good gilts will do well to write Mr. Bennett at once as per the advertisement on page 18 of this issue, kindly mentioning The Homestead.

BARBER'S PREMIUM CHESTER WHITES.

In this week's issue appears the Chester White advertisement of Mr. J. L. Barber, of Harlan, Iowa, who owns one of the best herds of white hogs in the state. He has a grand lot of spring pigs this year numbering about 150 head. These are sired by Jerry S., the second-prize boar at Des Moines in 1905; Captain, the first-prize boar at the Iowa State Fair in 1904, and Bully Boy. He has thirty head of fall hogs and sows sired by Advance 2d. Mr. Barber has one of the good prize-winning herds in the state, and he can furnish boars and sows at any time. Everything on the farm comes from prize-winning ancestry, and he has one of the best crops of pigs we have seen this year. Send him an order and mention The Homestead.

THE BELLOWES BROS. SHORT-HORNS.

Good things can reasonably be expected from the herds of Short-horns owned by Messrs. Bellows Bros., of Maryville, Mo., but it is indeed doubtful if the many who have visited there within the past few years can imagine much better things than have been produced there in years past. But that there is an improvement is sure. Perhaps the only mistake that this firm has made was when the bull, Hampton's Model, was sold in their 1905 sale. He had been used on a few cows, and the resulting offspring would, could he see them, make the South American gentleman who now owns Hampton's Model feel that he had bought a great bargain in this bull. Hampton's Best has a string of youngsters to his credit this year that have never been excelled in the history of this great sire. When the Choice Goods bull, Good Choice, was purchased, Messrs. Bellows made no mistake. He is rightly named, as it was surely a good choice. He is developing wonderfully well,

carries his thickness from end to end and his get show him to be a sire, probably the equal of the great Choice Goods. Messrs. Bellows' herds are in fine condition, the young things promise well and a visit to their farms pays the visitor well, whether he buys or not. That this is so is because Messrs. Bellows are cattle breeders and are breeding cattle regardless of fancies or fads. They are men who, when the time comes to retire, wish to be known in the history of the breed as improvers.

PETERSON'S DUROC JERSEYS.

One of the coming young breeders of Durocs is Mr. W. A. Peterson, of Lyons, Neb., and he comes forward this year with a splendid crop of pigs. He has been a buyer of some of the best sows from the Manley herd and also owns their old herd boar, Dandelion. This boar produced some of their leading winners and he has done good service in the herd of Mr. Peterson. He writes of his present crop of pigs: "My pigs have been doing nicely and my Dandelion pigs of March farrow are good, long fellows, low down and good bone. The April pigs are from a son of Orion and are doing great growing. They, too, are good boned and lengthy. You can tell them that if they want any pigs with Dandelion's massive bone and spring of rib it is now perhaps the last chance to get it in his blood." See page 21 for advertisement.

BRIDGFORD & NESBITT'S POLAND CHINAS.

Messrs. Bridgford & Nesbitt, of Aledo, Ill., the well-known firm of Poland China breeders, have a new announcement on page 18 of this issue which should interest readers of The Homestead. This firm have shipped a great deal of stock to our readers. Mr. Nesbitt until last year being in the Poland China business by himself. The partnership was formed at that time, Mr. Bridgford being one of the leading citizens of western Illinois and a large land owner. His father, Mr. O. A. Bridgford, of Aledo, Ill., has been identified with the thoroughbred business for over thirty years. In our future issues we will have more to say regarding the herd in detail. Those who are in the market for a good fall boar of show-yard type, or a spring boar of exceptional value will do well to write this firm at once for prices and descriptions, kindly mentioning The Homestead.

THE MINNESOTA HERD DUROC JERSEYS.

Mr. Harmon Gruver, of Brewster, Minn., starts his advertisement in The Homestead with this issue and announces that he has a good yearling sow for sale, bred to farrow August 30th. He also has an excellent crop of boar pigs for sale, among which are some herd headers. In writing of his present crop Mr. Gruver says: "My pigs have done nicely and I expect to be able to furnish as good stuff for the trade as I have in the past and my winning at the fairs would indicate that I have raised some good ones." Mr. Gruver has been one of the leading winners at the Minnesota State Fair, as well as at the International at Chicago, and he always gets his share of the ribbons. He has some good things to offer the boys this season and we suggest to our readers that they write him and get his prices. He can suit you both in the price and the pig. See advertisement on page 22.

TRONE'S DUROC JERSEY SALE.

A Duroc Jersey sale of unusual importance is that of Mr. Geo. W. Trone, to be held at Rushville, Ill., on Tuesday, August 14th. Mr. Trone is one of the oldest breeders of Durocs in this country and probably has won more ribbons at the leading shows than any other breeder. He owned the celebrated Oom Paul, a boar which had more first and sweepstakes ribbons to his credit than any Duroc boar living or dead. Gold Finch was another good boar which Mr. Trone owned and used with great success. He now heads the herd of Mr. Harry Riggins, of Petersburg, Ill., where he has bred some very good stock. Gold Finch was a winner at many of the strong shows of this country, his last winings being at the International in 1903, where he won sweepstakes. The combination of Oom Paul and Gold Finch blood has proven productive of very good results, as will be evidenced by the extra good lot of stock consigned to this sale. Mr. Trone has at the head of his herd four of as good, if not the best, boars that the writer has seen this year. They are Toko Paul 37819, the sensational boar of 1905. At the Iowa State Fair this boar caused much comment. His unusual size and quality, combined with his rich blood lines place him in the front rank of America's Duroc boars. Much of his get are to be found in the offering. The sire of Toko Paul was the noted Oom Paul. Another boar of unusual merit is Kruger II. 44013. He is a full brother to Kruger, the World's Fair winner. His sire is Gold Finch and several of his get are found in the lot, which Mr. Trone invites breeders to inspect and purchase at their own figures. Another

son of Gold Finch which cannot help but bring forth much favorable comment is Ninety-Mile. He will be retained in the herd, as his get are showing up nicely. The fourth herd boar which Mr. Trone is using at the head of his herd is Ring Worm. He was farrowed June 20, 1905, and is a grandson of Orion II. An examination of his pedigree reveals a combination of the blood of Oom Paul, Gold Finch, Dewey, Trone's Hero, Colonel F., Washington, Orion and Orion Chief. In our next issue we will have more to say regarding this offering individually, but would suggest to our readers that they write for catalog at once, kindly mentioning The Homestead.

W. T. GARRETT & SONS SELL POLAND CHINAS ON SEPTEMBER 25TH.

Messrs. W. T. Garrett & Sons, of Maryville, Mo., claim Tuesday, September 25th, for a sale of Poland China sows and boars. For this sale Messrs. Garrett will select from their large herd some twenty or twenty-five boars of both fall and spring farrow. An equal number of sows of fall and spring farrow will be sold. For about thirty years past Mr. Garrett has bred a type of hog that has been both profitable to him and his patrons. Fancies and fads have been ignored and as a result Messrs. Garrett have a uniformity and a type of hog that is seldom equaled and never excelled. The blood lines represent such strains as have been most reliable. In future issues more will be said of Messrs. Garrett's herd and their offering. Those wanting the time-tried and reliable Poland China will do well to make note of the sale date and be on hand. HOAG'S TOPPY POLAND CHINA BOARS.

Any of our readers who want a royally-bred Poland China boar pig should read the advertisement of Mr. J. C. Hoag, of Manson, Iowa, in this week's issue of The Homestead. He has a choice lot of spring pigs this season sired by Robert J. and Keep Alert, two of the very best sons of the noted prize-winning boar, Prince Alert, and he has a few litters by Manager, a son of the great Meddler. Mr. Hoag also has some good pigs by Shake Hands II. and by Iowa Chief. One of his neighbors, Mr. John Moore, has an excellent spring boar by Manager that may be seen at the Iowa State Fair this year, and he will not hurt the reputation of his sire as a breeding boar. Mr. Hoag will price any of these spring pigs, and we can say to Homestead readers who want a well-bred boar and one that has a future, they can't do better than to go and see this bunch. They are strictly all right. Write Mr. Hoag or go and see the pigs, and kindly mention The Homestead.

W. Z. SWALLOW'S POLAND CHINAS.

The name of Mr. W. Z. Swallow and Pioneer herd are synonymous. Mr. Swallow has been located about a mile and a half from Booneville, Iowa, some forty years, during all of which time he has been breeding Poland China hogs; in fact, at the commencement of his career as a breeder of this famous strain it had not yet received the name of Poland China, but was known as the McGee, Moore or Miami Valley hog. However, Mr. Swallow had this strain, that was afterward named Poland China, several years before the records appeared. The writer of this article was also breeding this same strain during these years prior to the record; hence, can speak knowingly concerning the proprietor of the Pioneer herd, who is beyond question the oldest breeder in the state of Iowa of the now far-famed Poland China. Mr. Swallow has never missed exhibiting at the Iowa State Fair since 1873, and for many years before that exhibited at the county and district fairs. Some of the most prominent Poland China boars that ever lived were his property, and when any breeder purchased a better one Mr. Swallow was sure to buy some of its progeny. As a successful exhibitor Mr. Swallow's name stands unparalleled. There is probably no other western breeder that has furnished the foundation stock for so many herds as has this old-time breeder. He has at this time 100 pigs for the season's trade of March and April farrow, sired by the great boars,

You cannot be well unless your stomach and bowels are right.
The thing to right them is
At your druggist's.

Jayne's Sanative Pills

Perfect Keep On and Prince Alert 2d. The most fashionable strain of blood extant can be found in Mr. Swallow's herd at the present time. He is a thoroughly reliable breeder with whom to do business and the Homestead heartily recommends him.

CORN BELT YORKSHIRES.

On page 15 of this issue will be found the advertisement of Mr. James Atkinson, of Des Moines, Iowa, who is an extensive breeder of Yorkshire hogs. Mr. Atkinson started with the best foundation stock obtainable some years ago and has been using extra good males ever since. His herd throughout this year averaged better than eleven living pigs per sow. His plan is to sell only his best males and females for breeding purposes and the balance he fits for the meat market. He has had no difficulty whatever in reaching the weight of 250 or 275 pounds on a carload lot by the time they are nine months old. Mr. Atkinson's Yorkshires have strong bone, good length and depth of body and withal plenty of finish. He certainly has a profitable type of this noted corn belt breed. He is also offering some richly-bred Chief Perfection 2d Poland Chinas. For something good in either of these breeds address Mr. James Atkinson, Des Moines, Iowa.

CLOVER BLOSSOM DUROCS.

One of the good herds of Indiana is owned by Mr. I. J. Lorton, of Union City. He has always aimed to keep good stock and although he has not the numbers to be found in other herds, he has the quality. His principal herd boar is I. J.'s Chief 45747. This boar took first prize in aged class at Indiana State Fair in 1905 and is the sire of many of the good ones to be found in the herd. The other herd boar in use is Col. Perfection 40575. Mr. Lorton has used this boar with much success and while he is offering him for sale, it is through no fault, but simply because he cannot afford to own two boars in a small herd. The writer representing The Homestead has seen this boar and is pleased to recommend him to any breeder wanting to make a show in the yearling classes. He is an excellent breeder, as will be seen by his pigs, many of which are offered for sale at this time. Write for further particulars, as per the announcement on page 19 of this issue, mentioning The Homestead.

AN ANGUS CENTER.

Scattered around the town of Maryville, Mo., are probably more herds of good Angus cattle than can be found in any one vicinity in America. These breeders (six in number) have worked together, built their various herds on solid foundations and improved them from time to time until today they have such a representative lot of cattle that attention of the breeding fraternity is directed toward Maryville when Angus cattle are wanted. A representative of this paper recently visited among these herds and saw many show cattle that will be out this fall. These will come from the herds of Messrs. C. D. Hooker & Son, Omer Catterson and Davis Bros. The other breeders around the thriving town of Maryville are Messrs. G. W. Fink, J. B. Robinson & Co. and W. W. Andrews, all owning exceptionally good herds founded on good families. It is generally regretted that Mr. Andrews will, on September 17th, disperse his herd, and the doddies lose one of the standbys of the fraternity in this section. Those wanting Angus cattle can do no better than to visit these herds, as the six herds can be visited at one trip. All live within easy distance of Maryville and any one will take pleasure in showing his own or his neighbor's cattle.

THE WM. SMILEY SHORT-HORN SALE.

The Homestead is pleased to call attention to the public sale of Short-horn cattle, the property of Mr. Wm. Smiley, of Malcom, Iowa. This sale will be held at Mr. Smiley's farm on August 17th, the day following the big Short-horn sale at Flynn Farm, near Des Moines, on the 16th. The offering embraces forty-six head of choice Short-horns, a large per cent of which are Scotch. We might add that it is practically a dispersion sale. A number of years ago Mr. Smiley purchased several Scotch cows of the Narcissus family, all coming through the great Crookson cow, Imp. Narcissus by Barmpton. The imported cow was bred by Mr. Amos Cruickshank, of Sittytton, Aberdeenshire, Scotland, and was imported in 1833. She belongs to the celebrated Cruickshank Flora family. From this family the Cruickshanks have probably grown as many noted animals as any other family in their herd. The great bull, King James, was of this famous family. In this offering there are eight head of the Narcissus. A choice bull will be found in the offering called Melba's Victorious. His dam was Imp. Melba and his sire the splendid Victoria bull, Victorious, owned by Mr. S. C. James, at New Sharon, Iowa, in whose hands he made a great reputation as a breeder. He is a solid red, three years old and in good shape to do a lot of hard service on some good herd. Another choice bull is Bruce Nonpareil, winner of second prize at the Iowa State Fair as a yearling in the Iowa class. He has been used as a herd bull with splendid success and he is sure. Out of twenty head of heifers bred to him, only one has returned. Another good bull has the euphonious name of Good Size 255834. His dam is Loudon Duchess of Oak Row. As evidence of the real intrinsic merit of the Narcissus family we should add that Mr. Smiley, after using a Narcissus bull, was able to show steers at such shows as Des Moines, Hamline, Kansas City, Chicago and at the World's Fair in St. Louis, and has in his possession over 100 ribbons of the following values: Ten purple, thirty-eight blue, twenty-eight reds, fifteen whites, six fourths, three fifths, which we must admit is a splendid showing at the fat stock shows for the past four years. Mr. Smiley has been pre-eminently a steer feeder, yet the chief end of all cattle is the block. Hence the man who has the right idea of the correct feeders' type must of necessity be possessed of that keen, rare judgment that dictates what the proper breed should be. These cattle will be in nice

breeding condition. At this date most of the females are on pasture and will not be over-loaded with flesh other than the natural flesh acquired principally on grass. This certainly will be a choice opportunity not only to secure some good Scotch cattle, but some splendid Scotch-topped as well. The catalogs are now ready for distribution and may be had for the asking by addressing Mr. Wm. Smiley, at Malcom, Iowa, and mentioning The Homestead. See page 19.

THREE GOOD DUROC JERSEY BOARS FOR SALE.

Messrs. Norrish & Bevington, of Kingsley, Iowa, are offering three good Duroc Jersey boars for sale in this week's issue of The Homestead. They will now sell their show and breeding boar, Pericles II., and they have the following to say: "We would like to dispose of Pericles H. and one yearling boar by Defiance by Reed's Model by Morton's Model. He is not large, but is good all through. We also have a fall boar, not fancy, but very smooth and strong, by Pericles H. and out of Fredonia III. Our old hog, Pericles H., is in fine condition and if crowded from now until September would make as good a show as he ever has. Cedar Lawn Model is coming along nicely and we were offered the modest sum of \$100 for him, which, of course, we refused. We expect to show a few at Sioux City. We are pricing these boars right and we think they are worth all we ask. We also think the yearling and the old hog would not look bad in some herds." One thing about the above firm is their modesty, and anything they say about these boars can be relied upon. Some of our readers who want a Duroc Jersey boar should write them at once.

HOFFMAN'S DUROCS.

That veteran Duroc Jersey breeder, Mr. H. H. Hoffman, of Washta, Iowa, is to the front again this year with about seventy-three spring pigs. Mr. Hoffman does not aim to breed as many as some of the boys, but what he does raise are always a credit to his efforts as a painstaking, discriminating breeder. His present crop is sired by Achiever 41219, a son of Chas. Blythe, a boar that was used with much success in the herd of Mr. Sol Frank, at Sioux City. This hog is now in use in the herd and is proving a most excellent breeder. He also has Gaytee 41215, a son of Delay, and he has two nice litters by him. He has two litters by Bon Bon, a boar used in the herd, but now sold to another breeder. His grand old brood sow, Paulette, by Pericles has seven choice pigs by Gaytee. This old sow never fails to raise a good litter and this year is no exception to the rule. He has three boars and four sows out of her this year, and they are among the very best he has. Octavia Hill 2d, a daughter of old Tolstoy, and one of his best producing sows, has six good, growthy, stretchy, well-developed pigs by Bon Bon, while Taylor V., a sow familiar to every breeder who has paid his herd a visit in recent years, has a nice litter of six pigs by Gaytee. We simply make mention of these three litters, but Mr. Hoffman has others equally good and will develop into good hogs as time goes on. There is no more painstaking breeder in the state than Mr. Hoffman and we unhesitatingly say none more reliable. As a judge he stands at the top, having been called upon to pass upon the different breeds at some of the leading fairs, and has always been considered a fair and impartial judge. He holds an expert certificate on the four leading breeds, and is therefore in position to describe an animal minutely to intending purchasers. His present crop of pigs are growthy and well developed, and it will not be a difficult thing to make a selection. We can recommend Mr. Hoffman and his herd to anyone who is looking for something worth the money, and who favors a square deal when buying the same. Kindly write him and mention The Homestead.

A GREAT LOT OF PRIZE WINNERS.

The advertisement of Messrs. J. M. Morrison & Sons, of College View, Neb., has been changed this week and you should look it up and see what they have to offer. The Duroc hog has made rapid strides in the last few years, and we must say that they are today up to the front row in breeding, as well as being ready sellers. The well-known herd of Durocs owned by the above named firm is one that gained recognition in some of the best shows of the breed. These gentlemen, in securing the foundation stock did not stop on a few dollars, but instead purchased the best wherever they could. Today we feel safe in saying that this herd has as many, if not more, prize winners than any herd in the world. The success of the business is not coming your way unless you do your part. The firm of Morrison & Sons have always tried to please all and the class of Durocs raised by this firm have been in demand. The last sale held by this firm was a record breaker. The average of \$135 was one that will probably stand for some time. The offering as a whole proved satisfactory in almost every case and this indicates that these gentlemen have the right type, as well as having the blood lines that are in demand. One of the latest purchases by this firm was the buying of the great show and breeding hog, Kan't Be Beat. This animal has a string of winnings that will make his name known forever. He was purchased from the Watt & Foust herd and will hereafter be used in the herd of royally-bred Durocs owned by Messrs. Morrison. This grand hog was shown fifty-eight times and received fifty-seven firsts and sweepstakes for his showing. This hog used on the class of sows in the herd should surely prove an exceptionally good cross. In reviewing the list of sows in part, we find Bessie H., sweepstakes sow at Nebraska in 1903; Alia 2d was first and sweepstakes at both Iowa and Nebraska in 1905; Van's Lady was first-prize sow at Nebraska in 1903; Sutton Lady was second-prize winner at Iowa and Nebraska in 1903; Village Pride was first in litter at Nebraska and Iowa. Miss Bob was not a winner herself, but produced Dan Patch, a third-prize winner at St. Louis, as well as having some winners last year. Parnell B. is among the sows

that have produced winners. Fashion was produced by Victor Banner. This sow is still doing service in this herd. Now, in reasoning, can anyone come out and doubt this herd? The goods are at your door. Don't miss out in some of the good things. Part of the grand lot above mentioned have litters by the great boar, Ohio Chief, and others sired by Morrison's Bell Top and Red Knight (sweepstakes boar at Nebraska in 1905). They have fall sows by Crimson Wonder.

GRIFFITH'S POLAND CHINAS.

Mr. W. G. Griffith, of McNabb, Ill., breeder of Poland China hogs and Shropshire sheep, has an advertisement on page 18 of this issue which should interest readers of The Homestead. At the head of his Poland China herd he is using a boar called H. G. Perfection 101675, he by Chief Perfection 2d, dam Proud Lady 247622 by Proud Chief 98547. Most of the spring pigs are sired by this boar. A very good litter is sired by Chief Perfection 2d and out of Salina by Keep On. There are four boars and two gilts in this litter, any of which would do in any herd. They are very uniform in size, type and quality and should not be overlooked by breeders wanting good stock. A fall litter consisting of ten extra good boars and four fancy gilts by Chief Sunshine 2d and out of a Perfection E. L. sow will attract the attention of discriminating breeders who will visit Mr. Griffith's herd. A litter of six, three boars and three gilts, by Chief Sunshine 2d and out of Queen's Sister by Chief Perfection 2d are an excellent lot and will prove profitable additions to good herds. The females in Mr. Griffith's herd trace to Chief Perfection 2d, Corrector, Keep On and Top Chief and are of prolific families. Any reader of The Homestead wanting good Poland Chinas should write or visit Mr. Griffith. He also has six good Shropshire rams for sale got by the imported Hammer-bred ram, Hammer 192071, which he is offering for sale at reasonable prices. Look up the advertisement and write for prices and other information, kindly mentioning The Homestead.

LAWSH'S PRIZE WINNING CHESTER WHITES.

We desire to call the attention of our readers to the Chester White advertisement of Mr. Geo. H. Lawshe, of Harlan, Iowa, one of the good young breeders in the West. Mr. Lawshe has been with us each year and always breeds first-class stock. He has about sixty choice pigs for this season's trade sired by Monarch Jr. 13301, the boar that has been a leading winner at several county fairs as well as at Des Moines. He also has pigs by Captain 14119, the first-prize boar at the Iowa and Minnesota State Fairs, first and sweepstakes boar at the Interstate Fair, Sioux City, and first in yearling class and reserve champion at World's Fair, St. Louis. He also has some fall boars sired by Advance 2d, a son of Monarch Jr., and some spring boars by Jerry S., the second-prize eighteen months hog at Des Moines last year, and the sire of the first and third-prize boar pig and first and third-prize premium sow at the same show. He has an excellent lot of brood sows in the herd, among which is Princess L., the dam of twenty pigs by Oakfield Eclipse. One of his best show sows is Cassie, a daughter of the noted show sow, Miss Hanna, and he will be at Des Moines with her this fall. He has eight January pigs out of this good sow now on the farm. Mr. Lawshe will be at the Iowa State Fair, where he will be pleased to see all of the Chester White boys. In the meantime if you want a boar or a few good sows write him. He will be able to fill your order and do it to your satisfaction. Please mention The Homestead when writing.

SALE OF SELECT SHORT-HORNS AT GENEVA, NEB.

Show cattle are plentiful in the Geneva, Neb., auction on Tuesday, August 7th. They will be so grouped with reference to families and relationship that breeders can see that they are buying animals that have not been produced by accident, but by sensible, scientific breeding. Mr. McGavock will have an exhibit of show cattle on the morning of the auction and it is his intention to parade them through the streets. Bapton Gloster, a Scotch bull, will head the exhibitors' herd and the Young Mary cow, Belle Onward, topped out with the most famous of Scotch blood, is the cow of the herd. Lady Alice, an Amelia, whose sire and dam's sire are respectively Orange Chief and Scottish Gold Dust, straight Scotch bulls, is the two-year-old. Yolande, a granddaughter of Imp. Gay Monarch and the cow, Imp. Makepeace, is the yearling, and one of the daughters of Bapton Gloster is the calf. The young herd selected is composed entirely of the get of Bapton Gloster, headed by the young bull, Bapton Gloster 2d. This young herd will prove difficult to defeat at the best shows as a herd, and it can also be shown as get of sire and also as produce of cow. The Cruickshank Orange Blossom cow, Orange Maid, has heifer calf at foot by Bapton Gloster and she is also the dam of the show heifer by same sire, Bapton Sweet Blossom. This is a very attractive trio of Scotch females. Sovereign's Orange Blossom bred by the noted breeder, Col. T. B. Hart, of Edinburgh, Ill., has a white heifer calf at foot, it being the only one of this color ever sired by Bapton Gloster, and the get of the bull in this auction will demonstrate that good, solid reds predominate. Some of the highest-priced cattle of the breed are white, and we trust that Sovereign's Orange Blossom, a very handsome roan cow, and her beautiful white heifer calf will be appreciated by western buyers. They are a very valuable pair of Scotch cattle. The Cruickshank Butterflies consigned by Mr. Giller comprise eight very superior females. Mr. Giller purchased Oakland Butterfly 8th, his foundation cow of this family, from Messrs. J. H. Potts & Son, who were among the first to recognize the superiority of Scotch cattle. Her granddam was imported by Mr. J. I. Davidson from the herd of Mr. Cruickshank, and the Butterflies were prolific in

BEFORE YOU BUY A MANURE SPREADER

SEE that its frame and sills are made of oak; that it has a ball and socket joint on front axle to prevent racking and twisting and steel braces and steel truss rods to guard against warping and sagging. APPLETON MANUFACTURING CO.
39 Fargo Street, Batavia, Ill., U. S. A.

the production of Royal and Higbland Society prize winners and have also given us in America many show cattle. Mr. Giller has used on this family the best and best-bred Scotch bulls, including Scottish Gold Dust, bred by Mr. Forbes; Orange Chief, bred by Messrs. T. R. Westrope & Son; Victor of Ilomewood, bred by Messrs. E. S. Butler & Son, and Imp. Milhurst Baronet, bred by Viscount Baring. Some grand specimens will be found in the offering, including the two-year-old heifer, Butterfly of Maple Grove; the three-year-olds, Dolphino and Butterfly 8th and Eva Fay, and the four-year-old, Virginia, Miss Eddy, and the two-year-old, Vera 2d. These Scotch females are in calf to the Broadhooks bull, Golden Broadhooks, bred by Mr. Dunwoody, of Minnesota, sired by the sire of champions, Imp. Golden Mist, and out of Imp. Lady Mary 4th by Sir Wilfrid Laurier. The auction is strong in every section and some exceedingly choice young bulls are cataloged. Western cattle interests will be benefited by these cattle being distributed and they should be appreciated by the best breeders of the country.

A SUCCESSFUL AUCTIONEER FROM THE START.

We take pleasure in presenting to breeders of pedigree stock of all kinds Mr. O. L. Mossman, of Polk City, Iowa, as an auctioneer that has "made good" from the start. Mr. Mossman is a conscientious worker at all times, and those who have had business dealings with him have found him honorable on all occasions. Mr. Mossman in his first year's experience as an auctioneer cried over fifty sales, all being satisfactory. The past year he has been seen at numerous hog sales and has ably assisted in making nice sales. When well-known breeders voluntarily recommend a man it may be understood that his services are the best. The following testimonial in regard to Mr. Mossman's ability is worthy of consideration: "Macedonia, Iowa, Feb. 4, 1906. Mr. O. L. Mossman, Polk City, Iowa. Dear Sir:—Since you were at my sales I have been thinking of the sales you have attended and will say I wish to thank you for the way you handled the ring work at those sales, including my own and several others. I desire to earnestly recommend you to my brother breeders as a ring worker that in my judgment has not a peer in the West. I am yours for business, R. J. Harding." This certainly speaks well for Mr. Mossman, and we trust breeders will bear it in mind. On page 23 is the card. Kindly look it over and when writing for dates, please mention The Homestead.

CANTINE'S DUROC JERSEYS.

On page 21 of this week's Homestead will be found the Duroc Jersey advertisement of Mr. H. L. Cantine, of Quimby, Iowa, who again announces to the red hog men that he has 100 choice pigs for sale. The name of Cantine is familiar to Duroc Jersey men because of the fact that it was the old firm of Messrs. Cantine Bros. & Steveson who bred the great boar, Crimson Wonder. Mr. H. L. Cantine continues in the business and his present herd is but a continuation of the old herd that has become so well known to Duroc Jersey men in all parts of this country. At the head of his present herd stands Crimson Wonder Jr. 4103, a full brother to old Crimson Wonder, and one of the very best living sons of old Tolstoy. This boar has been used in the herd and has some good litters of pigs which are coming right to the front. The noted old boar, Pericles, is still alive, and doing good service, and the pigs sired by him are all that could be desired. He also has several litters by Pericles H. and Top Notcher Chief. One of his best litters this year is out of Miss Logan 9th, a double line-bred Ohio Chief sow, and she has nine pigs that are as good as he has ever raised. Annie Laurie II., a granddaughter of Duroc Challenger on the sire's side and Tolstoy on the dam's, has eight good, evenly-made pigs by Pericles, while there are several nice litters by Crimson Wonder Jr. We can say to any of our readers that if they would get a good Duroc Jersey pig with price and quality to suit they cannot do better than to write Mr. Cantine or go personally and make their own selection. The time to pick a pig is right now, and you will be sure to get one of the good ones. Write him and tell him what you want, and be kind enough to mention The Homestead.

POLLOCK'S PERFECTION CHIEFS.

Mr. D. J. Pollock, of Thayer, Iowa, will be remembered as the man who brought out last year the great Duroc Jersey boar, Perfection Chief, winning first place in the eighteen months class with him at Des Moines. Mr. Pollock is very fortunate this season in having fifty head of spring pigs sired by Perfection Chief, and he is going to be able to give the boys about what they want. He will be at the Iowa and Minnesota State Fairs with a young herd, every one of which will be sired by the old hog. These will be Princess Alice, Queen Nicholas, Red Duchess and Perfection Duchess, and the two boars, Fancy Perfection 47957 and Perfection Chief Jr. 45827. These will make a splendid showing for Perfection Chief at the fairs this fall. In writing about his best litters he says: "Moline 5th, an Orion-hred sow, has seven very choice pigs which will be shown at the fair; Sly Maid, the dam of Fancy Perfection, which has been pronounced by four field men one of the very strongest senior pigs they had looked at this season, has a spring litter equally as strong, having great bone and length with good back and plenty of quality. Belle Onward, dam of my last year's show litter, was unfortunately, only saving three pigs, but they are of the show-yard type this year; Annie R. 10th farrowed nine pigs in the snow storms of March and saved the entire litter, and every one a good one, four of them being my very choicest show pigs; Faultless will be shown in the eighteen months and under two years class. She is a very strong sow, having all the good qualities and scale that anyone could suggest. Breeders who are wanting Perfection Chief stuff should write me, as I have about all this year's crop of pigs sired by him. Having sold him after the season I will be at the fairs with thirty head, and will be glad to have all my old customers and many new ones to call on me and see for themselves whether this field

note is misleading or not. I will gladly answer any inquiries, but will sell nothing until after the fair. Don't fail to come around and see me at Des Moines." When writing, kindly mention this paper.

ARDMORE CATTLE IN THE McGAVOCK SALE AT GRAND ISLAND, AUGUST 11TH.

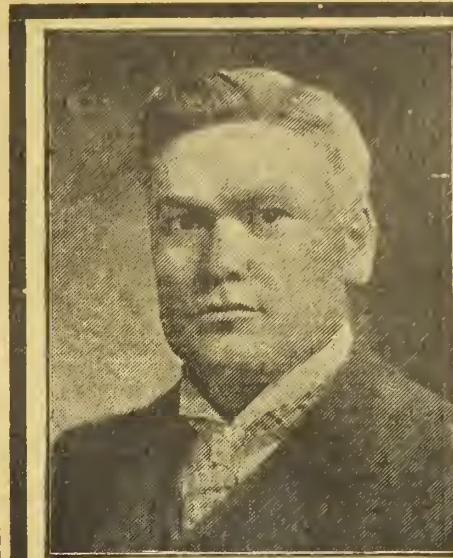

The Ardmore Stock Company, of Holstein, Iowa, will sell three bulls and two cows and one heifer in the McGavock sale at Grand Island, August 11th. One of the best bulls that will be in the sale will be Matchless Prince 223976. He is a two-year-old dark roan bull, weighing better than a ton. He is a son of Prince Matchless, a richly-bred Scotch bull, and is a Scotch-topped Rose of Sharon. He is a great flesh carrier and is in nice condition. They also sell Highland Chief, a yearling son of their noted herd bull, Imp. Scottish Pride. One of their best cows in this sale is Lady Constance 5th. Her sire is the Scotch bull, Major 14878, out of Lady Constance 4th by Prince President 2d and her next dam is by Imp. Master of the Mint. She will have a bull calf by Imp. Scottish Pride and is bred back again to the same bull. Another good cow is Maple Lodge Barrington, a straight Bates cow, with bull calf at foot by Imp. Scottish Pride and is bred back again to the same bull. Lady Barrington of Ardmore is a good two-year-old heifer sired by Dunblane 2d of Ardmore 181400 out of Maple Lodge Barrington, and she is bred to the great young bull, Superbus, second-prize bull to the reserve champion at Chicago last December. They are sending a good lot of cattle to this sale and we can assure our western friends that they will find them in good condition on sale day.

A FEW GOOD SCOTCH BULLS FOR SALE.

One of the best herds of Scotch Short-horns in western Iowa is owned by Mr. J. D. McDermott, of Wiota, Iowa, and just now he has a few good Scotch bulls for sale. One of these is a two-year-old bull called Senator, and is a son of Imp. Fashion Favorite, and his dam is Imp. Augusta Bruce. He is a dark roan, is a good individual and has been used on some of the best Scotch cows in the herd. Another good October bull is by Imp. Craihstone and out of Miss Bess by Bapton Spice. His grandam is Roan Bess, that sold in the N. A. Lind sale for \$575 when nine years of age. He is a nice red in color, well coated, has a splendid head and horn, a good back and spring of rib, and will please the man that is looking for a bull to head a herd. He has another good December calf, a son of Imp. Fashion Favorite and out of Imp. Gilted Maid. He is also a red in color. Mr. McDermott has a yearling bull on hand sired by Imp. Craihstone and out of Imp. College Nonpareil. The first man that sends \$100 gets this fellow. He is bred in the purple and is cheap for the price asked. Mr. McDermott says he wants to sell him to make room, and so he goes. Who will be the first man to go and get him? He has five imported cows in the herd, among which is Augusta Bruce, Roan Bess, Meadow Beauty 5th, College Nonpareil and Gilted Maid, and a better bunch of females cannot be found in the state of Iowa. In fact, nearly every cow on the place is a Scotch cow and a good one. Just now Mr. McDermott is selling bulls and anyone that wants one will have to speak quick. The thing to do is to go at once and see them and you will be sure to buy.

MORE OF DUNCAN'S MID-SUMMER SALE OF SHORT-HORNS.

The second announcement of Mr. H. C. Duncan's sale of Short-horns to be held at his Maple Hill farm near Osborn, Mo., on Wednesday, August 15th, will be found on page 19. This should prove a gathering of note in Short-horn history, as the selections for the sale are such as should draw from a large territory and attract those who appreciate good cattle because they are good and furthermore because they are bred from ancestors that were good. The attractions are numerous and the public will be given an opportunity to secure cattle that will do credit to any herd and to their breeder. Last week mention was made of the bulls in the sale and this week we wish to call the attention of our readers to the superior lot of females that have been selected for the sale. Of the forty head fifteen are of Cruickshank's best families, the balance are from seven-eighths to fifteen-sixteenths pure Cruickshank and all are good, the kind that have been the source of so much profit to Mr. Duncan and will be to their future owners. In the pure Cruickshank section is the grand breeding matron, Victoria of Glenwood 14th, and red cow calf got by Headlight. Victoria was got by the pure Cruickshank bull, Violet Spur. Her dam was by Imp. Giltspur, second dam by Imp. Favorite and third dam Imp. Victoria 73d by Roan Gauntlet. Then follow the great sires, Pride of the Isles, Champion of England, etc. She is a rare specimen of the breed and is the dam of the roan bull cataloged as Lot 5. Ury of Maple Hill, cataloged as Lot 5, is due to calve by sale day to the service of Magnet and is one of the most desirable things in the sale. She was got by Baron Dudding, he by Godoy, and one of Godoy's best sons. Her dam, Ury of Browndale 2d, was by Golden Rule; second dam Imp. Ury Girl by the Cruickshank bull, Vermont, he by Pride of the Isles. She is a show cow and a producer, as her yearling heifer cataloged as Lot 7 will show. The Marsh Violet heifers, Lot 14, Maple Hill Violet 16th, and Lot 15, Maple Violet, and Lot 16, China Rose, are three Marsh Violet heifers of the same breeding as Rosedale Violet 9th. She was sold by Mr. Duncan and Maple Hill is practically the home of the Violets in America. In speaking of Lot 14 Mr. Duncan says she is regarded by him as one of the best heifers he ever bred. They must be seen to be appreciated and those who like the Violets should not miss this opportunity. Lot 9, Orange Blossom of Wildwood 5th, will be found a desirable Cruickshank Orange Blossom. She has a two-year-old heifer and a yearling bull in the sale and is well along in calf to Magnet. Among the Scotch-topped sorts are several daughters of Magnet and among these are some that Mr. Miller, the exporter, admired very much and would have liked very much to export. Every female of breeding age is bred to one of Mr. Duncan's herd bulls and all have been handled in such a prac-

T. F. WILLIAMS, M. D.,
CONSULTING PHYSICIAN.

What my Patients say of my Treatment.

Halfa, Iowa, June 20, 1906.
T. F. Williams, M. D.,
Des Moines, Iowa.

Your request to fill out the blank received. I do not think there is any need of it, as I feel like a new man and believe I am cured. I am so thankful for the treatment. I have gained about ten pounds since I commenced your treatment.

Thanking you for what you have done for me I shall ever remain,
Your friend,
W. O. CURRY.

If you cannot come to Des Moines for a personal interview fill out the coupon and I will gladly send you my book on CATARRH, symptom blanks, etc, free of charge.

FREE TREATMENT COUPON

DR. T. F. WILLIAMS,

211-213 Crocker Building, Des Moines, Iowa.

Please send me Free Symptom Blanks with a view to my taking your free month's treatment.

tical manner as to insure their future usefulness and buyers will find everything in just such condition as to be of greatest value as breeders. Those going to the sale via the Burlington should stop at Maple Hill station, which is on the farm. Col. Geo. P. Bellows, assisted by able talent, will conduct the sale. Catalogs may be had for the asking.

BRODSKY'S DISPERSION SALE SCOTCH SHORT-HORNS.

Among the many Short-horn sales that will occur in the near future, one that is deserving of more than a passing mention is that of Mr. L. Brodsky, of Plover, Iowa, on August 23d. This is a dispersion sale and there will be some ninety head in the offering. By way of introduction we will say that Mr. Brodsky is one of the oldest breeders of Short-horns in the state of Iowa and there are few herds in the state that have achieved greater fame. While never a show man in the strict sense of the word, he has nevertheless bred some good show cattle and some of the very best things in many of the leading herds of the West have descended from or have been bred in the Brodsky herd. Of the ninety head that go into this sale, fifty head will be straight Scotch cattle. This is a larger per cent of Scotch cattle than has been put through any sale in recent years. There will be fifteen Mysies and seventeen Dorothys, two of his most noted Scotch tribes, as well as six Miss Buckinghams and two Miss Ramsdens, besides several other well-known Scotch families. Of the Mysie family Mr. Brodsky says: "The fact that out of the six bulls that have been used at the head of the herd four were Mysies indicates my estimate of the merit of this strain. It would be difficult to say whether the Mysies have contributed more toward the upbuilding of the herd than the Dorothys or vice versa. Were I to continue breeding Short-horns I would not think of parting with any considerable number of either strain. My herd bulls have come from the Mysie strain and I have now several females among the fifteen to be offered that I regard more valuable than any representatives of this tribe that I have ever owned heretofore. I refer to 7th Mysie of Pleasant View and her descendants and Beaver Creek Mysie 5th, without question among the most valuable Scotch females that have been offered for sale this year." The Dorothys have always been prominent in the herd and have contributed more than any other tribe with the possible exception of the Mysie strain. For many years the Brodsky herd has been the chief source of the Dorothys and they have been sought after by the leading breeders of this country. They have been exceptionally useful as breeders and the females have been great milkers. Among the most notable representatives of this strain are Dora Marr, that sold for \$1,330; Do Not Marr, that as a calf brought \$600, and Aberdeen Butterfly that as a calf sold for \$1,220. Among the offering will be thirteen bulls, including his Cruickshank herd bull, McDiarmid 168765, considered one of the most richly bred Mysie bulls now used in this country. The rest of the bulls will range in age from ten months to two years and they will all be Scotch with the exception of two. They are an exceptionally good lot and are bred in the purple. There are several in the bunch that should go to head herds. Of the female end of this sale we desire to say that there will be a splendid bunch of richly-bred and high-class

Scotch and Scotch-topped cows and heifers. Heretofore Mr. Brodsky has absolutely refused to put a price upon many of these, and it is now the great regret of his life that he is to part with this splendid herd of Short-horns. Advancing years and his inability to personally care for the herd himself is the reason why he now lets go. The Brodsky sale should be one of the most attractive of the season, to those especially who are endeavoring to build up good herds. He will also sell four head of Percheron mares, one imported Percheron stallion and one stud colt. The mares are bred and are safe in foal. He will also sell at private sale one of the very best stock farms in northern Iowa. Watch next week's paper for a more extended description of the cattle that go into this sale. In the meantime we would like to urge all our readers to write for a catalog to Mr. L. Brodsky, Plover, Iowa, and please mention The Homestead. See the advertisement on page 19.

THE ROLFE COMBINATION SHORT-HORN SALE.

On August 22d, at Rolfe, Iowa, will occur one of the good combination Short-horn sales of the year. This is a breeders' sale, made by Messrs. M. P. Hancher, Claus Johnson & Sons, A. G. Hewlett and Thos. H. Fisher, all well-known breeders in that vicinity. They are offering about fifty-five head, and seventeen of these are young bulls, some of which are straight Scotch, the rest being Scotch-topped, and some are especially good individuals. There will be a number of good Scotch females in the offering, and the most of these are put in simply as an attraction to the sale and not because they want to part with these cattle. Mr. M. P. Hancher is consigning eighteen head. Six of these are young bulls, six are heifers and the rest are matured cows. Two of these bulls are straight Scotch and are deserving of especial mention. One of these is No. 6 of the catalog and is recorded as Choice Goods Ury. He is a ten-months-old bull and is sired by Carter's Choice Goods, one of the very best sons of Imp. Choice Goods. His dam is Ury Lady of Roseneath by Morning Star, and he belongs to the well-known and popular Ury tribe. He is a richly-bred fellow, is a nice red in color, has a splendid head and horn, and is a good individual. This calf should go to the head of some good herd. He also sells a good roan bull called Brawith Lad. He is a son of Golden Lad, a richly-bred Brawith Bud bull that formerly headed his herd, and his dam is Imp. Rosemary by the Duthie-hred bull, Royal Standard. He will be about fifteen months old at sale time and he is going to make a 2,500-pound bull when matured. One of the best cows in the sale will be contributed by Mr. Hancher. She is No. 1 of the catalog and is Mina of Oak Ridge 2d. She is a Mina, a grand individual, and will have bull calf at foot by Gloster Prince. He also puts in a good Scotch heifer, a daughter of Golden Lad, and several good Scotch-topped cows, some of these will have calf at foot and others right at calving. Messrs. Claus Johnson & Sons are contributing ten head, among which are four bulls. One of the best of these bulls is Mysie's Lad, a son of Aberdeen Prince and he is a richly-bred Mysie. He is a good individual, is a solid red in color, and his breeding is all that could be desired. He is a herd-heading proposition for some man and will undoubtedly go to the head of some good herd. Another good

bull consigned by them is called Count, and is a son of Aberdeen Prince out of Stafford-made, one of their best cows. He is a Scotch-topped Young Mary bull. They are selling several other young bulls, and some good cows and heifers. Mr. Hewlett will sell fifteen head, and three of these will be young bulls, all sired by Aberdeen Prince. He is selling some good cows and five young heifers. All his cows will be bred or will have calf by his richly-bred Scotch bull, Baron Marr. One of his best cows is Lily Lavan, a five-year-old daughter of Highland Amburst. She will have a calf at foot by Baron Marr. She will also have a yearling daughter in the sale. Mr. Thos. H. Fisher will sell four bulls and four females, and he is putting in one of the best young bulls in the sale. He calls him Cherub 2d, and he is a son of his former Scotch herd bull, Prince of Abtane. He is a Scotch-topped Young Mary bull, but he is an unusually good individual. He sells two other bulls and several good Scotch-topped cows and heifers. Some of these will be well along in calf to his present Scotch bull, Prince of Rosebud. One of his best heifers is a Scotch-topped Rose of Sharon, and is coming three years old. This sale will afford a splendid opportunity to buy good bulls or cows and heifers. There are several Scotch bulls in the sale that breeders can well afford to look after. Of the females the catalog will give a detailed description. Send for it to Mr. M. P. Hancher, Mgr., Roife, Iowa, and please mention The Homestead when writing. See the advertisement on page 19.

GRANT WHITE AND HIS PROUD ADVANCE PIGS.

Among the rising young breeders of Duroc Jerseys none have come to the front more rapidly than Mr. Grant White, of Arton, Iowa, and this has been largely due to the fact that when he purchased stock for a foundation it was only the good ones that he selected. He has a splendid lot of pigs this year, mostly sired by that noted prize-winning boar and sire of prize winners, Proud Advance, as well as a number of litters by Keep On II., one of the leading state fair winners last year at Des Moines. Mr. White writes as follows about this year's crop of pigs: "My pigs have made an excellent growth so far and I am well pleased with them. I have twenty-five pigs by Proud Advance out of four litters. One of these litters is out of Lady Chief, a granddaughter of Ohio Chief, and one litter out of Dolly by Orion. Another litter is out of Russell Belle by Patsy Bolivar, and one litter out of Miss Queen, one of my very best brood sows. These four litters are all sired by Proud Advance and are good ones. I got a good cross here, as my boar pigs show lots of quality. I have three litters sired by Angie's Advance 4235, and one litter by Harding's Advance out of a granddaughter of Ohio Chief. I also have a litter by W. L. A.'s Choice Goods and one litter by Keep On II., the boar that took second at Des Moines in a class of sixty head. My junior yearling sow by Proud Advance is coming along in fine shape and if nothing happens her will make the boys go some to beat her. I also have four others, a boar and three sows, that I think are pretty good. Tell the boys to call around at Barn 14 state fair week, where they will find the Proud Advance Stock Company's headquarters. I will ship nothing till September, but am taking orders for spring boars."

NIDLINGER'S DUROC JERSEY SALE—LAST CALL.

During the past few weeks attention has been called to the forthcoming Duroc Jersey sale of Mr. J. D. Nidlinger, of Decatur, Ind., which will be held on Wednesday, August 8th. Breeders throughout the middle West should not overlook the importance of this sale. There is consigned to this offering one of the strongest collections of females that will go under the hammer in many months. They represent the best breeding sires and prolific families of the East. In point of individuality they are strictly of show-yard type and quality. Mr. Nidlinger thought enough of this offering to advertise them as show herds, and the writer representing this paper is pleased to corroborate the statement. Breeders will find in this selection females which have produced show-yard winners, also females of show-yard individuality. We wish this week to call attention to some of the leading boars and females to be found in the offering. Hanley 2d is a fall boar of September 16th farrow. His sire was Longfellow #815 and his dam was Bright Star II., the dam of Hanley. This young boar is a half brother to Hanley, the boar now heading the herd of Messrs. McNeil Bros. of Bowen, Ill., both being out of the same sow. He will make a good show this fall and should go to head some good herd. Decatur Boy 17097 by Wonder Chief 11691 by Red Bird F. 26550 by Gold Coin R. 8389 is an April, 1905, boar. He has good length, bone and stands on the best of feet. He will do well either in the show yard or at the head of some good herd. J. D.'s Improver 17095 is one of the best boars to be sold at auction this year. His sire, J. B. J. 11121, was a show-yard winner, and his dam, Wilda, by Echo King, was the highest-priced Duroc sow ever sold at auction east of the Mississippi river up till November 16, 1905, the date of Mr. Nidlinger's fall sale. This boar was shown five times last year and won five ribbons. With forty good pigs in the ring he won second at the Indiana State Fair last year and had many admirers for first place. Breeders should not overlook this boar if in need of show-yard material or a herd boar. One of the best females in the offering is Decatur Belle. She was sired by Top Notch by Top Notcher and her dam was Lucy Bennett by Referee. At the Indiana State Fair in 1904 this sow won first in aged class. She has been a regular breeder and has produced much good stock for Mr. Nidlinger. If he was going to show this year no opportunity would be given breeders to secure this good sow at their own figures. Decatur Queen X. 37906 is another of the good kind which are demanded by breeders. She was sired by Echo King and her dam was Decatur Queen 1st 27012. She has never been fitted for show, but has been reserved for breeding purposes. Her litter mates were shown the entire season of 1904 and won every first and second prize where they were driven

into ring. Her grandam was the champion sow at the International in 1902 and was there sold to Mr. J. C. Leach, of Carbondale, Kan., for \$205. Lack of space forbids particular mention of the offering individually, but we wish to go on record as making the statement that no sale of past months has offered so many tried sows, many of which are bred to noted boars for fall litters, as does the sale of Mr. Nidlinger. We are sure that breeders will be pleased with the offering. To those who cannot be present sale day we would suggest that bids be sent to Mr. D. M. Pierce, representing this paper, in care of Mr. Nidlinger. They will be properly handled. Write today for catalog as per the announcement, kindly mentioning this paper, and plan to be present on Wednesday, August 8th, to attend this the first important sale of the year.

LAST CALL FOR G. L. BELCHER'S DISPERSION SALE OF SHORT-HORNS AND TROTTER-BRED HORSES.

On next Wednesday, August 8th, at the Walnut Ridge farm, one mile west of Carrollton, Mo., Mr. Geo. L. Belcher, of that place, will disperse his herd of Short-horns and his stud of trotting-bred horses. Mr. Belcher's sale should be liberally attended, as his is a sale of stock that has been bred on the farm, both the Short-horns and the trotting-bred horses, and have been producers above the ordinary, as from a small, but very select foundation Mr. Belcher has been able to build up a good-sized herd of Short-horns and a good-sized stud of horses. The Cruickshank families are well represented in the Short-horns, as are some of the better American-bred families. The Rose of Sharon have been well thought of and a goodly number trace to that grand old breeding matron, Imp. Rose of Sharon. All of breeding age will either have calves at foot or be bred to the Scotch-bred herd bull, O. C. The horses are by the great sires, Norberry 2:17½ and Alora 2:09½. Norberry is not to be sold at auction, but considering his record as a performer and the quality of his get he will be priced privately and at a bargain price. All the other trotters go in the sale, as Mr. Belcher is preparing to move to another state soon. Colonels Graham, Sparks and Harriman will conduct the sale. Carrollton is on the main line of the Santa Fe and Wabash and on a branch of the Q. See page 21 for the last announcement.

MORE CONCERNING THE FLYNN FARM SALE OF SHORT-HORNS.

In last week's issue we directed attention to the character of bulls used at Walnut Hill for the past thirty years. We also reproduced the announcement of the sale catalog which tells the story of the great sale of Short-horns from Flynn Farm, August 16th. Inasmuch as the farm is an incorporation there will be no change in the arrangement of this sale because of the sudden death of Mr. Martin Flynn. A representative of this paper has carefully inspected the offerings of fifty-seven head and considers them a very practical and useful lot of cattle. The management at Walnut Hill has always been liberal with the public when it came to a selection of the sale stock. The herd now numbers something like 350 head, hence a draft of some sixty head can be made, including some of the most valuable cattle without seriously impairing the breeding herd. Those who attended the 1905 sale will doubtless remember the very superior lot of young bulls that were led into the ring for exhibition purposes, the get of that magnificent bull, Grand Duke of Enterprise. There is probably no Scotch bull in America standing on shorter legs or that is thicker in his flesh than Grand Duke. In other words, he is a pure Bates bull, possessing all of the Scotch characteristics that have made the Scotch cattle world-famous, and yet without a drop of Scotch blood in his veins. One of his best sons, called Crown Prince Wild Eyes, is being used liberally on the herd with marked success. Perhaps in the third of a century of breeding Short-horns at Walnut Hill no other bull has been produced that gives promise of so great a future. His dam is one of the best bred Bates Wild Eyes cows living, Lord Nonpareil, by the famous Scottish Victor, is also being used in conjunction with the great imported bull, Lovat Champion. Thus it will be seen that the Walnut Hill herd possesses two of the best bred Bates bulls living, to head the Bates contingent and equally as well bred Scotch bulls for use upon the Scotch females. It would be difficult to find a herd of such proportions with less culls or inferior animals than are to be found at Walnut Hill. It was one of the unwritten laws of the late proprietor that no inferior or non-productive females could find shelter at Walnut Hill. So antagonistic to drones or inferior animals was the late Mr. Martin Flynn that he had no patience with them whatever. It is certainly worth while to consider when buying the foundation stock for a herd of cattle that they have come from and through the hands of so reputable a breeder as the late Mr. Flynn, in whom no man could find any just complaint in any way. It is a well-known fact that many of the purchases made by various breeders in years gone by from the Walnut Hill herd have gone into later sales and sold at prices doubling the purchase price. Not only that, but many of the best herds in the land have more or less of Walnut Hill breeding contained therein. There will be some choice young bulls listed, including the great Lord Avon 2d. This bull was calved June 23, 1903, and is a son of Golden Lord, his dam being Alcatraz 3d, a daughter of Highland Chief, she being out of Alcatraz by the great Scotch bull, King James. The third dam, Andromeda, was by Imp. Thistle Top. The fourth dam was Imp. Autumn Glade by Cumberland, she being bred by Mr. Amos Cruickshank. For someone who is desirous of placing at the head of their herd a bull that will increase the milking qualities, Lord Avon 2d is certainly a good proposition, as he comes from the best milking family of the Scotch cattle in the Walnut Hill herd. Majestic Earle is a splendid yearling bull sired by Lady's Earle, his dam being Imp. Lady Mary 16th. This is a straight Scotch bull, his dam being one of the best matrons in the herd. He gives every promise of making a great sire. To anyone in search of a splendid Bates bull attention is directed to Prince Wild Eyes 1th, a red bull calved May 28, 1905. This is a full brother to one

Simpson - Eddystone Silver Greys

Fast color is not merely a name but a splendid reality in these dependable dress-goods. They wash repeatedly without fading. Appropriate to wear any time of year.

Duncan's Mid-Summer Sale of Short-horns

At Maple Hill Farm, Near Osborn, Mo., Wednesday, August 15, 1906, at 12:30 P. M.

10 BULLS, 7 PURE CRUICKSHANK. 10.

Among the bulls are my herd bulls, MAGNET 188058, an Orange Blossom, Golden Headlight 245876 and Scottish Victor 244264, three as great herd bulls as have gone through any sale this year. The remaining Scotch bulls, two Orange Blossoms, one Victoria and one Eliza, are exceedingly good and very promising.

40 FEMALES, 15 PURE CRUICKSHANK. 40.

The Cruickshank females consist of Victoria of Glenwood 14th and heifer calf, Ury of Maple Hill, her yearling heifer, Maple Hill Violet 16th, Maple Violet, China Rose, a Violet, and bull calf, Orange Blossom of Wildwood 5th, Maple Hill Orange Blossom and Gloster of Maple Hill, a Duchess of Gloster. The balance of the females are from seven-eighths to fifteen-sixteenths pure Cruickshank and of families that have been bred on my farm for thirty years.

I am selling as good cattle as I am retaining in my herd. Everything guaranteed. My illustrated catalogs give complete information regarding the offering, time tables and how to reach the farm. I would be pleased to mail one to all who are sufficiently interested to write.

H. C. DUNCAN,

OSBORN, MO.

Col. Geo. P. Bellows and Others, Auctioneers.

Wm. SMILEY'S SHORT-HORN SALE

To be held at MALCOM, IOWA, August 17th

About 50 Head. A choice line of Scotch and Scotch Topped Cattle.

Several Herd Bulls, Pure Scotch, including Bruce Nonpareil and Sheridan. Aside from the 8 head of Cruickshank Narcissus family are such Cows as Imp. Daybreak's Princess, Lady Ann 16th, and other noted celebrities. Beef and milk have been my specialties and this is practically a dispersion sale,

hence the tops go. A goodly number of the Cows have Calves at foot. Others are bred to the very select Bull, Abbotsburn Marshall, a grand son of Young Abbotsburn and the world's champion cow, Mary Abbotsburn 7th.

THIS SALE WILL BE HELD THE DAY FOLLOWING THE FLYNN FARM SALE AT DES MOINES and is only 45 MILES FROM DES MOINES.

Catalogs mailed by addressing

WM. SMILEY, Malcom, Ia.

Col. Geo. P. Bellows, Auctioneer.

PLEASE MENTION THE IOWA HOMESTEAD WHEN WRITING FOR CATALOG.

Dispersion Sale of Celebrated Champion

Baby Beef Herd Aberdeen Angus Cattle at Stock Yards Pavilion, Galesburg, Ill., Tuesday, August 14th

Fifty head of celebrities are cataloged, including the champions and their sires, dams, brothers and sisters, and all are strong in the blood of the renowned Nosegay, the most popular champion Angus bull that was ever exhibited in American show yards. More high-class bulls are cataloged than were ever seen in one sale in this country and include Rosegay 2d 75856, Rose's Earl 63086, Vala's Rosegay 63745, Key 72172, Intensified 93993, Echo Ito 33734, Equalizer 83737, Envoy 3d 93990 and Evener 93998, several of which have defeated the best bulls of the day, and from which, I believe, can be selected all the great first-prize winners and champions of 1906. Eleven Trojan Ericas, several of which are imported and all of the best individuality and most fashionable blood lines will be auctioned. The Ballindalloch K. Pride cow, Key of Chicago, that I consider the greatest cow of the breed today, will be sold with her prize-winning son and daughters, and there are also included other superior Prides. Every family in the herd has produced prize winners and champions, and each and every animal goes without reserve on this occasion. For catalog of this great dispersion sale address, mentioning this paper,

C. H. GARDNER, BLANDINSVILLE, ILL.
COLS. CAREY M. JONES AND SILAS IGO, AUCTIONEERS.

50 Tops of the Breed at Auction

Selections from the Willow Stock Farm RUSHVILLE, ILL., TUESDAY, AUGUST 14TH, 1906.

Fifty head of fall and summer boars and gilts and a few spring boars. The breeding and the individuality of this offering cannot be excelled. The blood of Oom Paul, Gold Finch, King Morton, Milton Orion, Kruger and other sires equally as noted flows in their veins.

The sires used on the gilts are Toko Paul 37819, a son of Oom Paul, grandson of Jumbo Red, his dam Hallena, by Gold Finch, Hallena's dam being Washington-Kruger I. 44013, by Gold Finch 7549, his dam being a granddaughter of Washington 447-Ring Worm, by Milton Orion and he by Orion II., of World's Fair fame, his dam being Ohio Belle, by Ohio Chief 8727 (A.)—Ninety-mile, by Gold Finch 7549, his dam by Dewey 6975 (A.) and out of White Oak Belle III., she being sired by Trone's Hero.

No better or more popular breeding can be found anywhere. Come to the sale and see for yourself that the individuality is there, too. Parties from a distance can reach the sale either by going to Rushville or Frederick. You will be taken care of.

Send for catalog, mentioning The Homestead.

G. W. TRONE & SONS.

Col. Callahan, Col. Reppert, Aucts.

Send bids to D. M. Pierce, representing this paper.

DUROC JERSEY HOGS.

Dispersion of the Famous Gold Dust Herd of Durocs.

HAVING decided to close out my Gold Dust herd of prize winning Duroc Jerseys, I now offer to the public, at private treaty, my entire crop of spring boars. They are sired by Tip Top Notcher, grand champion at World's Fair, acknowledged by most competent judges to be the best Duroc boar in America; Ohio Chief II, one of the best sons of Ohio Chief; Champion Paul, a son of the noted Oom Paul; and Fancy Orion, an exceptionally good son of the World's Fair winner, Orion Chief. I am keeping my sows and spring gilts for closing out sale on October 24, although I have received tempting offers for them at private treaty. I am keeping nothing back and my entire herd will be disposed of at private and public sale. Write for prices and descriptions at once if you want a herd boar from Gold Dust herd. Address,

GEO. W. SECKMAN, RIPLEY, ILLINOIS.

Grand Valley Herd of Duroc Jerseys.

Will have fifty head of Perfection Chief 28367 pigs and fall yearlings to sell after Sept. 1st, including Fancy Perfection 47967 and Perfection Chief Jr. 45827, the two best sons of Perfection Chief ever sired. Look for Pollock and the Perfection Chief herd at the fairs Iowa, Minnesota and Kansas City Royal.

D. J. POLLOCK, THAYER, IOWA.

W. N. Booth, Danbury, Iowa.

When writing please mention this paper.

SHORT-HORN CATTLE

Twenty-eighth Annual Sale Event

AT THE

WALNUT HILL BREEDING FARM

Thursday, August 16, 1906

Fifty head of females are listed from the most popular families of pure Scotch and pure Bates represented at Walnut Hill. Ten very choice young bulls, including herd headers of absolutely high individual merit, from both Bates and Scotch strains. In this offering is listed a very large proportion of early maturing, milk and beef Short-horns in the Scotch and Bates bred lines and it will without doubt be an event which must attract the more thoughtful Short-horn breeders.

The sale will be held at Walnut Hill Farm, where every possible comfort will be provided for our guests on sale day. Parties from a distance will be provided with free entertainment at the Wellington Hotel in Des Moines.

Catalogs containing all the pedigrees of the cattle to be sold, together with full information concerning the sale, will be mailed to applicants.

BEAUTY AS APPLIED TO CORN.

In the first annual report of the Kansas Corn Breeders' Association there appears a paper on the subject, "Practical vs. Fancy Points in Corn Judging," by Prof. J. T. Willard, of the Kansas Agricultural College. Speaking of the score card Professor Willard says:

The score cards emphasize points that have much to do with the beauty of the individual ear, but which have little or no bearing upon its practical value. Varieties are judged with reference to an arbitrary standard selected as a type, notwithstanding the well-known fact that the type of any variety of corn is altered by a change of climatic relations. It is insisted upon that the ends of the cob must be well covered with grain; that white corn have white cobs and yellow corn red cobs, and that the rows must be straight. All these are merely fancy points, conformity to which does not insure, nor even tend toward, a maximum production of nutriment per acre. It might even be argued that possession of a cob which is not always filled to the utmost limit is a variety characteristic to be sought rather than to be discarded, since it indicates a habit of growth which in favorable seasons might be taken advantage of to extend the length of the rows of grain.

We take issue with Professor Willard on a number of points mentioned in the above extract. In the first place, take the color of cob. Professor Willard says that this is a fancy point and that it does not insure, nor even tend toward, a maximum production of nutriment per acre. We claim that it does "tend toward" this end. What does a white cob in a yellow variety mean? It means that at some time in its past this corn has been mixed with a white variety. This being true, it stands to reason that there will not be the same uniformity in the crop as would be the case if it were more nearly pure bred. It is just as sensible to say that the cross-bred animal will produce as satisfactory and as uniform results in breeding as the pure-bred as it is to say that a cross-bred corn will yield as good returns as the variety that is more nearly pure. There might be exceptions, as in the animal kingdom, where the grade will give as satisfactory returns as the pure-bred, but in the great majority of instances this will not be the case.

Again, Professor Willard says that having straight rows does not even tend toward a maximum product. His teaching on this point is absolutely erroneous. Straight rows are advised in selection because this means uniform grain; that is, grain that is uniform in size and shape. When such grain is placed in the planter it can be planted uniformly, and we would like to ask if a uniform stand of corn does not contribute more to maximum production than one that is not planted uniformly?

We do not state that any score card yet designed is perfect, but we do say most emphatically that the use of the score card has done much to improve the character of the corn in the central West. We quote another statement from Professor Willard:

Corn judging will lack very much of being on a practical basis until a variety is judged by its crop-producing power first. The chemical composition of the crop produced is the next consideration, after which accessory and fancy points may receive some attention.

We agree that the yield per acre and chemical composition of the crop are the main objects sought by the crop grower, at the same time we believe that important means to this end should be kept in mind by the grower, and in this regard the score card has contributed its share. Then, after all, there is money in beauty points in corn apart from the fact that they contribute to

yield per acre. Go onto the markets of a big city with a load of corn grown from acclimated pure-bred seed and you will command from two to five cents more per bushel than will the other fellow who is on the same market with ordinary corn. You can imagine a case where the inferior-looking corn might yield as much and be as rich as the good corn, but it does not command the price.

The principal weakness of the corn in the central West at the present time is that it lacks in uniformity. Let our agricultural colleges and experiment stations proceed to teach our people how to make it uniform. The use of the score card is doing this splendidly and we are in favor of letting the good work go on.

FORCING YOUNG ANIMALS.

Improvement in our various breeds of live stock has been brought about by the operation of two agencies; namely, liberal feeding and sensible selection. The one is the counterpart of the other,

and a new era of progress will be ushered in.

The best results can only be obtained by starting right with the young animal. In the case of beef cattle, whether raised for the block or for breeding purposes, a good start during the first six months of an animal's life is half the battle. Let a calf be well thickened up in flesh before it is weaned, and there will be little difficulty in carrying it on as a yearling and two-year-old in a condition that favors all-round development to the greatest possible extent. The beef calf must have plenty of grain, not only before, but after it is weaned. There may be a time, if pastures are good, that grass alone will be sufficient for a few weeks, but under ordinary circumstances there is money in feeding grain to the beef animal almost continuously.

In the case of hogs it is easier to overdo matters in the way of feeding. This is especially true with the fat breeds, and as a consequence fat-producing foods must be fed with a spare hand, otherwise the fullest development may

sows that will take through a big litter without making it profitable to feed the little fellows some grain before they are weaned, and considerable meal in the form of slop after the weaning period. The one object that should be kept in mind at all times is to maintain a maximum degree of growth in bone and flesh, thereby laying the right kind of a foundation, either for an animal intended for the block or one to be used for breeding purposes. By the sensible use of good pastures it is not too much to expect to make a pound of gain on a thrifty young pig for every pound of grain consumed. Do not understand us to say that any animal can make a pound of gain from a pound of feed, our claim being only that the thrifty animal will supplement the grain with enough pasture to make the gain mentioned. Of course no animal will do this during the first few weeks, or in fact the first few months of its life, but it will do it if sensibly handled after it has been given a good start.

HOW TO DEAL WITH STUBBLE FIELDS.

There are usually about four months of growing weather after cereal crops are removed. This is ample time for annual weeds to mature seed. Foxtail usually comes on and fairly covers the soil, while morning glory and, possibly the worst of all, cocklebur flourish. Many a man is too busy to get his plowing done early, and as a result he finds that his small grain area is given a fairly good seeding down to weeds of various kinds.

It stands to reason, therefore, that stubble land should be plowed early in the fall. In addition to the destruction of weeds that is wrought by early plowing, the soil is benefited inasmuch as the effect is much the same as the summer follow. Unquestionably fertility is liberated during the fall months, and this will have its effect in increasing the yield the following year.

Ordinarily throughout a considerable part of the central West the conservation of moisture during the fall months is not regarded as of very great importance, and yet we believe this will be emphasized more in the future than in the past. Stubble land becomes very harsh and considerably baked when it is left untouched after the crop is removed. If it is plowed, even though the surface is somewhat lumpy, the conditions are such that it usually works down into a friable condition. Many annual weeds may start during the fall months and this is in itself an important advantage, because everyone that starts will be killed by the frosts of winter.

It must be acknowledged that a certain amount of loss takes place when the soils are plowed early in the fall. Humus is broken down and, as said before, fertility is liberated. Nevertheless, we believe that the greater degree of availability of the elements contained in the soil at early plowing more than offsets the disadvantage that results from the loss of fertility.

CHANGING BREEDS.

No single breed of live stock is possessed of all the virtues of the species, nor are all the faults wrapped up in a single breed. No question is submitted to us more frequently than that relating to the matter of breeds. "Which do you regard as the best breed of beef cattle, hogs or horses?" is the common form of inquiry. To this we always re-

THE PEORIA LEXINGTON STEEL RANGE.

Manufactured by Culter & Proctor Stove Co., of Peoria, Ill.

A full line of steel ranges and stoves will be exhibited at the Iowa State Fair. See page 4

and the individual who aims to hold the improvement that has already been made or to progress still farther, must emphasize equally these two factors.

It stands to reason that an animal whose ancestry has been liberally fed for a period of half a century is unfit by inheritance to make satisfactory development unless supplied with plenty of nourishing food. Let this principle become established in the minds of all men who are engaged in raising live stock

be checked. Our most successful swine breeders aim to keep their pigs straight and strong until they are six or seven months old. They use bulky foods to a considerable extent, and these always include plenty of grass or other green crops. The young pig that is fed heavily on corn and allowed but little pasture may look a little better while young, but the outcome is never so satisfactory as it is in the other case.

In our opinion there are very few

ply that there is no best breed. The fundamental principle that should guide a man in choosing a breed in the first place is his own tastes or instincts. No man will ever make a decided success in any business that he does not like, and this is particularly true as applied to live stock affairs.

Nothing is more common than to see men who handle one breed of live stock this year, particularly hogs, changing to another next year. They do this because the first breed was not sufficiently profitable to suit them, or it may be that the animals did not reach the desired weight at a certain age. A neighbor does much better with another breed, and the natural thing is to make a change.

We do not say that it is never advisable to change after one has made a reasonably good start along a given line. However, on general principles, we advise holding to one breed for at least a period of five years. Of course in the case of cattle and horses it is a serious matter to change, even in so short a time as this, but as applied to hogs one can make a change without involving any serious expense. We say five years because this gives a man the opportunity to breed up something according to his own ideals. If with good care he then fails, he is certainly justified in making a change.

But many of the faults that are credited to the breed are due to improper methods of feeding. Take the matter of prolific qualities. One or two breeds of our hogs are noted for their lack in this regard, and yet at the same time in every township of the central West may be found a number of men who are able to raise an average of seven or eight pigs per sow, using the very breed that is most denounced for its weakness in this respect. These men who succeed use a sensible system of feeding. Invariably they make freer use of the cereals and do not feed corn so heavily. By using oats, barley or rye in conjunction with mill feeds during the gestation period, even fat, heavy sows may often be brought through in the very best condition to raise large litters. These same sows put on a corn ration will frequently not raise enough pigs to pay for their own keep. We have in mind one herd where a number of sows had three and four pigs, though just as many may be called to mind where the average was seven or eight.

Before changing breeds, therefore, we suggest that special pains be taken with one crop of young pigs in feeding them for breeding purposes. Use bulky foods as much as possible when they are young and make the greater part of the growth the first year on pasture, oats, mill feeds and the concentrated meals, such as oil meal and tankage. If young sows fed on such a ration do not farrow on an average of seven or eight pigs, then we would at least change the strain if not the breed. In any event, we would not advise taking up a breed that one naturally does not like.

FALL SOWN ALFALFA.

Throughout a considerable part of the corn belt, alfalfa may be seeded in the fall with reasonable expectation of having it come through the winter in good condition. If the crop is started sufficiently early so that strong, deep roots are developed, there is not much danger of heaving during the winter and early spring months.

It must be remembered, however, that while alfalfa at all times requires an exceedingly well prepared seed bed, special pains must be taken to have conditions right when it is sown in the fall. Usually an oat, barley or spring wheat stubble is what is chosen for alfalfa. As soon as the cereal crop is removed it is a good plan to disk the land once or twice. This corresponds to the prac-

tice of disking corn land before it is plowed, the effect being to create a mulch which not only conserves moisture at the time, but when plowed under afterwards assists much in the making of a fine, firm seed bed.

Plowing need not be done deeply, four or five inches being sufficient. The harrow should follow as soon as the land is plowed, and one should watch his chance and if possible go over the land after every shower. This tends to conserve moisture at a critical time, and it also brings the seed bed into the best possible condition.

Seeding is usually done in August, though it frequently happens that there is not sufficient moisture to germinate the seed until the month of September. In case there is enough moisture in the soil to bring on the crop at once, alfalfa will make considerable top before winter and a rank surface growth means a strong root development. A crop that gets to be six or eight inches tall before the ground freezes stands an excellent chance of coming through the winter in good shape. Such annual weeds as are germinated along with the alfalfa are killed off by the frost, so that the crop has less opposition in the spring from weeds than is the case where it is seeded in the spring.

It is not too much to expect that alfalfa seeded in the manner described, at the rate of fifteen or twenty pounds per acre, will furnish excellent pasture the following year for hogs. If it is not convenient to pasture it there may be one or two cuttings. In this way one does not lose a year in establishing a crop, but obtains something for the outlay for seed and labor at once.

F. D. COBURN ON ADVERTISING.

No man's opinion on agricultural matters, as applied to corn-belt conditions, is more highly regarded than that of Secretary F. D. Coburn, of the Kansas Board of Agriculture. When he writes a report he fills it with interesting material that is very much to the point; when he prepares a platform address he starts in by saying something and stops before the audience is ready for the close.

Some time ago Mr. Coburn was invited

to give an address before a body of advertising men in Chicago on the subject of advertising. In part Mr. Coburn said:

By many publicity and advertising are regarded as synonymous, and publicity looked upon as the aim, purpose and end of advertising. Publicity and advertising, in the more comprehensive meaning of advertising, may be as divergent as the poles. Publicity is advertising, but only in a restricted, narrow, meager sense. Publicity alone may be cold, heartless and even repellent; it breathes no warmth; it announces, but no more. Advertising that does not attract, influence, persuade, tempt, inspire, induce, convince, captivate, that is not magnetic, is the product of an abortion and still born. Its usefulness is that of a locomotive without steam, a furnace without fire, or a woman without a heart.

Half the money spent for publicity might as well be consumed by fire, in so far as are concerned appreciably beneficial results to the spender. Probably two-thirds of the money spent for publicity has been virtually wasted, except as it was a benefaction to those through whose hands it passed or in whose trousers it found lodgment. Yet, not half the money that might advantageously

Rex Flintkote ROOFING

For Fire

Rex Flintkote Roofing is the best protection against fire. It keeps outside fires from getting in, and inside fires from getting out. It is not a tarred paper, but a close pressed wool-felt, treated with our special water and fire-resisting compound. Fire-brands falling upon it smoulder and die. Fires started in buildings roofed with Rex Flintkote have consumed half the rafters, and still left the roofing intact.

For Water

Rex Flintkote keeps poultry and hay from destruction by wet; even slush may lie indefinitely upon Rex Flintkote and not a drop will penetrate.

Samples FREE with booklet on roofing. Our special red paint produces artistic effects on Rex Flintkote. Include 4 cents in stamps for book, "How to Make Poultry Pay."

J. A. & W. Bird & Co., 85 India St., Boston

Chicago Office: 222 Lake Street

be used to bring buyer and seller together is devoted to such purposes.

All advertising, to accomplish a good purpose, must be built on integrity. Its sponsors must be able to deliver the goods, of the kind and quality promised, in full measure. As to expense, high-cost advertising may be entirely reasonable, while that which looks low priced may be absurdly high.

Striking illustrations of the idea that half to two-thirds of the money for publicity is thrown away are afforded by calendars, desk blotters, lead pencils, tape measures, fans, badges and buttons. Well-nigh millions are disbursed every year for gimcracks, gewgaws and trumpery of this class, and I believe such expenditures never returned ten cents on the dollar and never will. This, too, in the face of the fact that usually the recipient accepts, uses and is in a way thankful for the gift. Yet that it in any effective way persuades him to buy your wares or even makes him specially think of you or of them I regard as a beguiling fallacy. He may have the calendar, blotter or pencil constantly before him, but the legend or name it bears is read only at the moment, if at all, to forget and never to heed. I use on my own desk for example, the blotters which this or that insurance company supplies in generous bundles, but they are never perused. I never know what company they are supposed to speak for, and I am no more influenced by them than by the paper on the wall. I look elsewhere and not to such sources for information; if I do not read them they do not inform me, and if not informed I am not persuaded to be a patron. Their gift does not, as is supposed, secure my friendship, for no man whose friendship is of any cash value gives it in return for barter so unsubstantial.

I would rather, for business-building and business-getting, have three lines of well-placed, favorable reading notice, looking as if they were the expression of a reputable journal, in the right territory, in the right season, than a bale of blotters, a dray-load of calendars, and a badge or button for everyone silly enough to lend himself as sandwich man for my uses.

We have just one word of comment to offer on the above extract, namely, that of making integrity the basis of all advertising. For a time it may be possible to hoodwink the public, but eventually the public will get even with you. We doubt if any class of advertisers come as near giving full value to their customers as do breeders of pure-bred stock, and for the very reason that men on the farm as a rule do not care to have their integrity questioned. At the same time perfection has not been attained. Sometimes a fraud is unwittingly perpetrated on a buyer because the seller is a poor judge of live stock himself, while there are cases where pure-bred animals that should be slaughtered are sent out as breeders. In the long run, the man who follows up his advertising by sending out only animals that come up to a high standard, feeding out the balance for another market, will come out on top finally.

HARVEST HANDS—NORTHWEST.

For parties of five traveling together on one ticket, The Chicago Great Western Railway will have on sale the entire month of August tickets at rate of \$14.50 per capita to nearly all points on the Great Northern, North Pacific and Soo Lines in Minnesota, North and South Dakota. On the return trip, rate will be \$1.50 higher. For full particulars address E. J. Sawyer, 514 Walnut St., Des Moines, Iowa.

\$5.95 TO MINNEAPOLIS AND RETURN

Via Chicago Great Western Railway, account G. A. R. Encampment August 13th to 15th. Tickets on sale after August 11th. For further information apply to E. J. Sawyer, City Ticket Agent, 514 Walnut St., Des Moines, Iowa.

EXCURSION TICKETS TO MILWAUKEE, WIS.

Via the North-Western Line, will be sold August 12th, 13th and 14th, with favorable return limits, on account of Grand Aerie, Fraternal Order of Eagles. Apply to agents Chicago & North-Western Ry.

A PROMINENT ILLINOIS DUROC BREEDER.

Mr. Ed A. Baxter, of Pawnee, Ill., proprietor of the Pawnee herd of Duroc Jerseys, at the head of which stands Buddy K. IV., the first-prize and sweepstakes boar at Illinois State Fair, 1905. See Field Notes.

Farm Furrows

Turned by a Practical Farmer.

Crows are enemies of farmers. This should be understood.

The pasture is a pig's paradise. The pig does not know it, but the owner ought to.

Sam says he has practiced watering his cows early and often to prevent them from going dry.

Runt pigs and calves are good for nothing except as time-killers. As a rule it does not pay to take care of them.

The old hen should have a chance to scratch—but not in the garden or flower beds. Usually such places are very inviting.

Potato parings and water do not constitute the best ration for building backbone in hogs. It may do to make "spare rib."

The old, worn-out mower will be just the thing for mowing the roadsides. A good mower may be spoiled if used for such purposes.

Quick growth is not most desirable in a colt. What is needed is steady growth. A colt can't be a colt one year and a horse the next.

The man who depends on barrels for storing or shipping his apple crop can not get them too soon. There will be a scarcity of them later on.

It is like pulling teeth to get a farmer to leave his stacking and help a neighbor thrash. There ought to be some rule for neighbors to go by in this practice.

Have the weeds increased steadily in your meadow? If so it is probably due to making hay too late when the seeds of most weeds have ripened and become troublesome.

A weak place in the harness should not be neglected, and especially if in the lines or the tugs. A man gets into a scrape sometimes when he has but one line on his team.

The gentle bull with a stamp of innocence on his countenance should be watched closely. A gentle bull can go wrong very suddenly and sometimes it may be when one is not watching.

There have been only two times in the past twenty years when hogs have been higher than they are at present. The crop of spring pigs is light and the prospects look bright for a maintenance of good prices.

Market prices for certain products always answer as a factor to keep men from embarking in their production. They will say the prices are too low, and when they get high they can't get in the business. Is this the best policy?

A friend of mine was such a poor writer that he bought a typewriter, and it was then discovered that he was even a much poorer speller than he was a writer. It is important that children learn to spell and write while in school.

One dog iron said to another one hot day: "There is not much for us to do these days; let us go up in the garret and wait for some crazy relic-hunter to come along." Once dog irons were a necessity; now they are an ornament in some homes.

The cotton picking machine, the milking machine and the corn husking machine are still in their incipency. It is barely possible that genius will some time present us with machines that will perform such work as well or even better than can be done at present by hand. The latest machine to supplant hand work is the sheep shearing machine, which has come to stay.

The Iowa State Fair will have an air ship this year at the fair and the operator will fly from the fair ground to the capitol, going away above the dome of that great building, and will fly all over the city and return. People who attend the fair will not be disappointed, for I saw this same man flying about for six days while in attendance at the World's Fair at St. Louis two years

ago. This will be a sight that one can afford to go many miles to see.

The horse breeder who is looking for the best stallion will do well to pay some attention to the dam. To have a reasonable assurance of obtaining good colts they must be the fruit of a good dam.

It requires plenty of patience to work about horses in fly time and not get mad. When hitching the tugs there will be great activity of the tail, and if the man has not the best of control over his temper he is liable to do something he should not do.

I like to see a carpet sweeper in homes where there is carpet to sweep. The rug business is calculated to take away some of the functions of this up-to-date implement. The easiest way to clean a rug is to take it out of doors and give it what Paddy gave the drum.

As a rule I do not bother moles. They seldom do much mischief for me. This year they are more troublesome than ever before. I found one working in my lawn. I pulled the hose out to where he was working, inserted it in his burrow, and in less than a minute I had Mr. Mole.

Before many years there will be a greater demand for corn. This does not necessarily mean that there will be a greater acreage, but a greater yield. Denatured alcohol will help make a demand for it. This means that the acres in the corn belt will have to be farmed better.

Just imagine a farm paper giving directions how to cure a sun-burned face. A farmer who goes about his business as he should is seldom bothered with a sun-burned face. Occasionally he will have his shoulders burned if there is a hole in his shirt, but never his face. His face is immune from the rays of the sun.

The gigantic press of The Homestead will be seen in operation on Thursday of State Fair week and all of our readers are invited to see it at that time. To those who have not seen a press of this kind in operation it will be a rare sight. Visit our new and commodious home at the northwest corner of Third and Locust streets.

I heard a farmer say the other day: "If I were ever so rich I would not make cement floors for my horses and cows to lie on. I believe it brings on rheumatism and other ailments, no matter how much litter is strewn on them." The soft side of a good plank makes an ideal place for a cow or a horse, if kept in good condition.

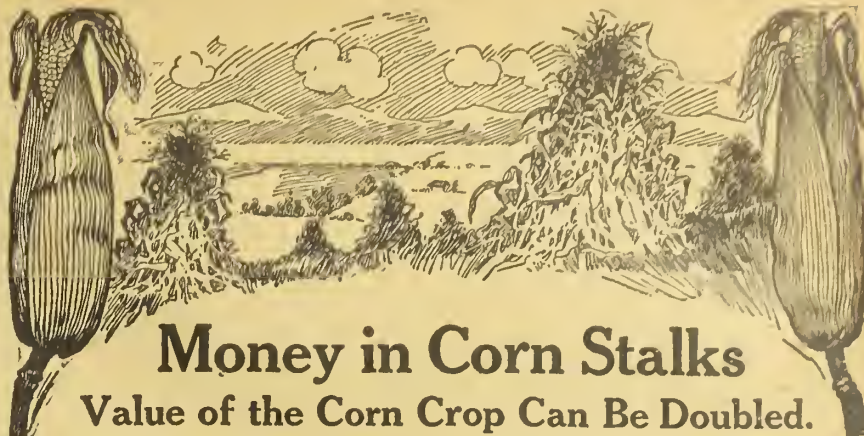

A claim is made that the mule-footed hog is proof against cholera. It seems to me that I have heard claims made that other breeds were cholera proof. I remember that it was once said of the razor-back, but I know that they will die. Let a healthy cholera germ get at one of these mule-footed hogs and see how quick it will get him.

The usual special inducements will be offered all farmers and their families who wish to attend the Iowa State Fair the last week in August by selling six admissions for \$2. Nobody but campers can get this rate. Free camping grounds, free shade and free water will be provided all who wish to camp. No finer camping grounds can be found anywhere. Two firms will supply tents, cots and other camp equipment at reasonable prices.

I have a secret that I do not wish to publish so everyone may know it, but I'm going to tell you about it. Please do not tell anyone. I scattered some rat biscuit on the top of my porch and it is wonderful the decrease in population of English sparrows about the premises. Other birds do not frequent such places. Another good place to scatter the rat biscuit is in the rain spouts, provided the water is not used in a cistern. I have no compromise to make with sparrows.

Reinforced Concrete Fence Posts.

There is a constantly increasing demand for some form of fence post which is not subject to decay. The life of wooden posts is very limited, and the scarcity of suitable timber in many localities has made it imperative to find a substitute. A fence post, to prove thoroughly satisfactory, must fulfill

Money in Corn Stalks

Value of the Corn Crop Can Be Doubled.

When your corn is ready to be harvested, if you have an average crop, the fodder will represent about as much value as the ears.

This is a conservative statement, based on the actual feeding value of corn when cut at the right time and properly husked and shredded.

It is now pretty generally known that when corn reaches maturity, about 60% of its feeding value is in the ears, while the remaining 40% is in the leaves, husks and stalks.

Our Government Experiment Stations have proved this by chemical analysis, and have been teaching it to the farmers for a long time.

Have you benefited by their teaching and by the practical experience of thousands of dairymen who have adopted the double profit method of handling the corn crop?

The double profit method is this—just when the ears begin to glaze, the field should be gone over as rapidly as possible with a good corn harvester and binder or harvester and shocker—the right machine will do the work quickly.

In this way you can harvest the whole crop while both the fodder and ears have the most feeding value.

After the corn has been cut, you can run it through the husker and shredder at your convenience—this work is usually done in the fall and winter months.

A good crop of corn yields about two tons of stover per acre. Our Experiment Stations and other practical feeders find that stover is nearly equal to good timothy hay, so it doesn't matter whether there is a market for your stover or not. You can sell your hay and feed your stover.

McCormick, Deering, Milwaukee, Champion and Osborne Corn Binders; Deering, McCormick and Plano Huskers and Shredders.

In each of these machines you have all the advantages made possible by the unequalled manufacturing facilities of the International Harvester Company.

The International Harvester Company owns its own timber lands and saw mills, its own iron and coal mines, its own coke plants and rolling mills, from which it produces a large percentage of all raw materials used, selecting in every instance only the best material and working it out in the best way in the above great manufacturing plants. These are advantages which no buyer can afford to overlook.

The international lines are represented by different dealers in your town. Call on them for catalogues and investigate these machines.

International Harvester Company of America, Chicago, Ill.
(INCORPORATED)

three conditions: First, it must be obtainable at a reasonable cost; second, it must possess sufficient strength to meet the demands of general farm use; third, it must not be subject to decay and must be able to withstand successfully the effects of water, frost and fire. Although iron posts of various designs are frequently used for ornamental purposes, their adoption for general farm use is prohibited by their excessive cost. Then, too, iron posts exposed to the weather are subject to corrosion, to prevent which they should be repainted from time to time, and this item will entail considerable expense in cases where a large number of posts are to be used.

At the present time the material which seems most nearly to meet these requirements is reinforced concrete. The idea of constructing fence posts of concrete reinforced with iron or steel is by no means a new one, but on the contrary such posts have been experimented with for years, and a great number of patents have been issued covering many of the possible forms of reinforcement. It is frequently stated that a reinforced concrete post can be made and put in the ground for the same price as a wooden post. Of course this will depend in any locality upon the relative value of wood and the various materials which go to make up the concrete post, but in the great majority of cases, wood will prove the cheaper material in regard to first

cost. On the other hand, a concrete post will last indefinitely, its strength increasing with age, whereas the wooden post must be replaced at short intervals, probably making it more expensive in the long run.

In regard to strength, it must be borne in mind that it is not practicable to make concrete fence posts as strong as wooden posts of the same size; but since wooden posts, as a rule, are many times stronger than is necessary, this difference in strength should not condemn the use of reinforced concrete for this purpose. Moreover, strength in many cases is of little importance, the fence being used only as a dividing line, and in such cases small concrete posts provide ample strength and present a very uniform and neat appearance. In any case, to enable concrete posts to withstand the loads they are called upon to carry, sufficient strength may be secured by means of reinforcement, and where great strength is required this may be obtained by using a larger post with a greater proportion of metal and well braced, as is usual in such cases. In point of durability, concrete is unsurpassed by any material of construction. It offers a perfect protection to the metal reinforcement and is not itself affected by exposure, so that a post constructed of concrete reinforced with steel will last indefinitely and require no attention in the way of repairs.—(Farmers' Bulletin.)

THE HOMESTEAD

A Practical Journal for the Farmer, Stockman, Fruit Grower, Poultryman, Gardener and Housekeeper.

BY JAMES M. PIERCE.

JAMES ATKINSON, Editor in Chief.

ESTABLISHED IN 1855.

Entered at Des Moines Postoffice as second class matter

PUBLISHED EVERY THURSDAY.

SUBSCRIPTION RATES—Single subscriptions, \$1 a year; ten copies one year, \$10, and an extra copy to get up of club. In clubs of one hundred or more, 25 cents a year. Single subscription three years in advance, \$2; five years in advance \$3; ten years in advance, \$5. Remit by draft, registered letter, postoffice or express money order. In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send the old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to

THE HOMESTEAD COMPANY,

SOME SUGGESTIONS ON USE OF THE KING DRAG.

A good roads bulletin recently published by the Missouri State Board of Agriculture, and prepared by Mr. D. Ward King himself, contains much excellent advice which, if followed, would radically improve the roads of the corn belt. Mr. King devotes a page of his bulletin to what he calls "Suggestions," which are as follows:

As a general rule, always haul the drag at an angle of forty-five degrees, moving the dirt to the center of the road. The action of the drag is covered by four things:

First, the length of the chain, which is regulated by slipping it backward or forward through the hole in ditch end of drag. The length of the chain regulates the hold taken on the earth. To make the chain longer is equivalent to putting weight on the drag. If your drag is too heavy, shorten the chain.

Second, the position of the snatch hook, which attaches the doubletrees. To move such dirt, or cut small weeds, hitch the hook close to the ditch end of drag and stand as nearly on the end of the front slab as is safe. Drive very slowly when thus hitched. This one hitch seems to

be the hardest to learn. The others suggest themselves.

Third, position of the driver on the drag. To move dirt see above. In a soft spot stand on rear slab. On a hard spot stand on front slab and drive slowly. If the drag clogs with straw, weeds, sod or mud, step to a point as far as you can get from ditch and to other extreme. To fill a low place or mud hole nicely is the severest test of skill with the drag.

Fourth, presence or absence and sharpness or dullness of the steel. The steel may project half an inch below the wood at the ditch end of the steel, but should come up flush with the wood at other end of steel. After a clay or gumbo road has been dragged four or five years the soil becomes so tough and putty-like that one must study it closely to know what to do. Sometimes we use sharp edge of steel; sometimes dull edge (holes are bored in both edges of steel so that you can turn it upside down and use same bolt holes), and sometimes the plain wood.

This can be learned only by experience, and you have several years in which to study the problem.

Why do you "Hide Your Light Under a Bushel?" is the subject of this week's chapter of the continued story by the Litchfield Mfg. Co. Read it and watch this space next week.

CULTER & PROCTOR STOVE COMPANY.

On our first page we show the celebrated Peoria Lexington Steel Range, manufactured by Messrs. Culter & Proctor Stove Company, of Peoria, Ill., makers of high-grade steel ranges and cooks, cast ranges and cooks and heaters of all kinds. The company have an enviable reputation of forty years' standing for making high-grade goods. Commencing the manufacture of stoves in 1856, at their present location, Fayette and Water streets, Peoria, the business has grown each year, calling for more room until they have taken up the entire block from Fayette to Hamilton streets, which site is covered by five-story buildings. An inspection of this complete plant would convince anyone that every care was taken and no expense spared in their efforts to produce the very best only. The very latest improvements in machinery are installed, only skilled labor employed and only the best of materials of all kinds used. The closest attention is paid to every detail and all goods closely inspected. They pride themselves on the durability of their goods, the mounting, fitting, nickeling and general, handsome, attractive appearance. They endeavor to keep their line right up to date in every respect and are constantly putting new goods on the market, all of which are thoroughly tested before marketed, so if you want the best, look for the name, Culter & Proctor Stove Company, which will be found on each and every stove. This company enjoy a large trade on their steel ranges, of which the Peoria Lexington is their leader and special pride. A range that stands alone as the acme of perfection in family ranges. Everything of the best is used in the construction of these ranges. The outside body is made of the very best obtainable heavy anti-rust plished steel that will retain its luster; has double walls of heavy steel lined with heavy asbestos mill board; hand riveted every two inches with steeple head rivets. The oven door hinge is put on with square head machine bolts through cast plate on inside, making it perfectly tight and rigid; cannot work loose. The catch for oven door and cast top of range are fastened on in the same way. All parts coming in contact with fire or intense heat are protected with cast iron plates with asbestos mill board between cast plates and steel. Top oven plate is covered with asbestos protected with cast iron frame; has perfect operating slide damper (original with this company) and found only in their Peoria Lexington, Sterling Lexington and Wabash steel ranges and Peoria Lexington cast ranges. Has large fire box lined with heavy sectional linings; duplex grate which can be reversed for wood; grate is easily removed and replaced without disturbing the fire box linings or water front. Has deep ash pit, so ashes cannot hank up and cause grates to burn out. Large, balled ash pan and ash chute to guide all ashes into pan. Cast iron back flue or smoke box. Has patented non-breakable drop oven door, perfectly balanced. Will remain open at any angle and when dropped to horizontal position is a perfect and substantial oven shelf. Has double flue bottom which holds heat in oven and insures quick, even baking. Has thermometer in oven door. Has handsome substantial cast base; nickel ornamentation very elaborate, elegant and attractive. Their Sterling Lexington, Wabash and Active Mascot steel ranges are made of same high-grade material and with same care as the famous Peoria Lexington and will be found to equal the best steel ranges made by other manufacturers. The Regal Peoria hard coal base burner is a new design and strictly high-grade modern stove, having all the latest improvements of practical value in a base burner. Very economical and a powerful base heater by reason of their perfect flue construction which throws heat over entire base, utilizing all heat. The hot air circulating flue draws cold air from the floor and in its passage through the heated base, up and through back flue to hot air exit the air becomes thoroughly heated. By attaching pipe to collar over hot air exit this heat can be carried to upper room, or by reversing the damper this heat can be thrown out into room occupied by the stove. The Regal Peoria has improved duplex grate and patented ball bearing shaking ring, very easy to operate and removes the necessity of using a poker, as the shaking ring thorough-

YOUNG MEN WANTED

WE SHALL need a thousand young men to fill positions in banks, insurance offices, wholesale and jobbing houses, etc., within the next nine months. These young men must be graduates of our school. Why not enroll with us September 3 and get ready to accept a position? Our catalog is free.

ly cleans out all ashes from outer edge of fire pot. A very handsome stove. The Peoria gas burner is something entirely new, being a magazine stove for soft coal, hard coal, coke, lignite or slack. The only stove ever made that will, with entire satisfaction, burn soft coal and slack in a magazine and will automatically feed soft coal and slack as readily as hard coal. Positively will not burn up or coke in the magazine. Has down draft smoke and gas consumer that does the work perfectly and at same time keeps coal in magazine cool and this is the secret of its success. It is very economical in the consumption of fuel; cuts your fuel bill in half. A wonderful fire keeper. The handsome nickel trimmings and illuminated mica front door make the Peoria gas burner a very cheerful and attractive stove. Ask your dealers for Messrs. Culter & Proctor Stove Company's goods, or write direct to the company and they will give you full information about any style or styles and tell you where you can buy them. A cordial invitation is extended to all to examine their goods at the Iowa State Fair, August 24th to 31st.

HOMESEEKERS' EXCURSIONS.

CHICAGO GREAT WESTERN RAILWAY.

On the first and third Tuesdays of each month until November the Chicago Great Western Railway will sell homeseekers' tickets to points in Arkansas, Indian Territory, western Louisiana, Mexico, New Mexico, Oklahoma Territory and Texas at rate of one fare plus two dollars for the round trip, except that a maximum rate of \$23.00 from Des Moines will be in effect to above territory with the exception of Mexico. Stopovers will be allowed in both directions. Limit thirty days, stopovers both ways.

On the first and third Tuesdays of each month until November the Chicago Great Western Railway will sell homeseekers' tickets to points in Arizona, Kansas, Missouri, Nebraska, Nevada, Utah, Wyoming, Alabama, Florida, Georgia, Kentucky, eastern Louisiana, Mississippi, North Carolina, Tennessee and Virginia at rate of one fare plus two dollars for round trip. These have limit of twenty-one days to return and allow stopovers on going trip.

On the first and third Tuesdays of each month until November, homeseekers' tickets will be on sale to Denver, Colorado Springs, Pueblo, at rate of \$23.00 from Des Moines and to Ogden and Salt Lake City at rate of \$29.50. Other Colorado points in proportion, all having limit of twenty-one days to return and allowing stopovers on going trip.

To points in Idaho, Montana and Washington homeseekers' tickets on sale the first and third Tuesdays of May, June, September, October and November at rate of one fare plus two dollars for the round trip, tickets having limit of twenty-one days to return.

To points in Minnesota, North Dakota, Manitoba, Saskatchewan and other Canadian provinces, homeseekers' tickets are on sale each Tuesday this year. Have limit of twenty-one days and allow stopovers west of St. Paul.

Full information can be obtained from E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

This Keeps Lightning Out Of Your Telephones

This is our "No Risk" Lightning Arrestor. Pull the knob, and your telephone is absolutely cut out. Lightning cannot enter your house.

Protects the house, avoids fire, insures safety for the family.

FREE TRIAL OFFER you can try the "No Risk" Lightning Arrestor FREE. Or send us \$2.00 and get the complete arrestor. Fully guaranteed to protect as we say or money back. Reliable Agents wanted. One man sold 15 one day. Another 35 in 5 days. "Edith Sutton, La Russell, Mo., was instantly killed May 21st by lightning while talking over country phone." "Forty country telephones were burned out at Beatrice, Neb., in an electrical storm June 5th." "Abner Hosking, Norway, Mich., was struck by lightning June 6th while standing near his country phone." "Atlantic, Iowa, June 24.—Lightning played havoc with the rural phones in all directions." All could have been prevented by using "No Risk Lightning Arrestor."

TIMOTHY

Why timothy, clover and other farm seeds. And sample state quantity and lowest prices. IOWA SEED COMPANY, DES MOINES, IA.

Care of Young Pigs After Weaning.

BY C. A. STEELE, OGDEN, IOWA.

At the age of six to eight weeks the pig should be making most of his living on slop and grain and will not miss his dam. There should not be over forty in a bunch; they must be grown and not fattened. Feed them so they will eat lots of grass and succulent food. This they will not do if they are fed all the slop and grain they can eat.

Mill feeds are expensive and we must try to raise feeds that will take their place as much as possible. Barley and oats sown together make a good yield and are an excellent hog feed. Rape sown early will make a good growth and will be ready when the clover and blue grass begin to dry up. Sorghum is also excellent as a feed and the pigs seem to like it even better than rape.

For slop I feed a mixture about as follows: Ground oats and barley, three-quarters; cheap flour, one-quarter, and add to this about one-tenth oil meal. Oil meal tends to keep the bowels loose and makes their coats look good and adds a richness to the slop that the pigs seem to relish.

This is soaked over night. We often hear a protest against the slop barrel, but if two barrels are used and each barrel allowed to dry out and sunned every other day there is no danger of their becoming sour and filthy. Soaking makes the slop more palatable and easier to digest.

Tankage is a valuable food and can be fed to advantage until the grass gets a good start, and for breeding stock it should be continued through the summer. Corn is the hog feed and the bulk of the grain ration must be corn and as long as the pigs get plenty of exercise and eat plenty of grass, there is little danger of them getting too much corn. Of course they must not get all they can eat, but what they will eat up clean with relish. It should be soaked. Those that are intended for pork should have more corn than the breeding stock, and it should be gradually increased so that by the time new corn is getting hard they have all they can eat.

The breeding stock should be separated at the age of about three months, or as soon as the males begin to bother, as it is hard to get them to settle down after they once begin to fret. These should make a large part of their gain on mill feeds, soaked oats and barley and grasses. There should be a pen where one can put the weaker ones and give them special care. What milk there is and a little stock food with their feed will soon help them so they can hold their own with the others, and we will thus make a profit on something that would otherwise have been loss. There should be a patch of sweet corn to feed before the field corn is ready. This makes a cheap feed and should be found on every farm where hogs are kept.

However, caution must be used in starting pigs on new corn. Corn does not infect the hog with disease, but if fed in large quantities at first will produce a weakened condition, thus making them susceptible to disease. All through the life of the pig we should endeavor to prevent disease by the use of disinfectants and correctives. Charcoal, ashes and coppers should be kept in a self-feeder where they can get at it at will. A little coal tar dip in the slop barrel once per week is helpful in keeping down disease. Lime water should be used freely, both as a wash around pens and in the slop. It destroys odors, retards the growth of germs and prevents indigestion, besides it furnishes ingredients helpful in producing bone.

Keep the pens and house clean and use whitewash and disinfectants freely. Beware of wallows; fence them in or disinfect them. Worms cause more trouble in raising pigs than anything else, but if disinfectants are used freely they usually do not bother, though if the pigs become infested the following is an excellent vermifuge: Santonin, one ounce; baking powder, one pound; oil meal, two pounds. Mix and feed in slop two feeds, this being for twenty-five or thirty-pound pigs. Cut down their feed twelve hours before feeding. Pigs are often injured by indiscriminate dosing with strong chemicals. Care must be used.

Pure water should be supplied by means of automatic fountains. They must also have shade during the hot summer months.

SUMMER FALLOW FOR KILLING PERENNIAL WEEDS.

The time has not yet come throughout a considerable portion of the corn belt when there is any profit in summer fallow considered from the standpoint of crop production. Its merit under any circumstances is due to the fact that in a period of rest where the surface is kept stirred from time to time fertility is changed from the insoluble to a soluble form; hence the usual increase in the crop yield after a summer fallow.

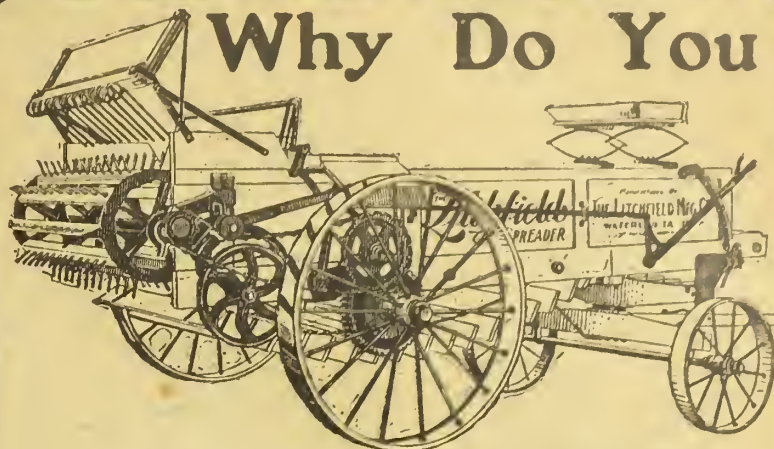

The Minnesota station has recently prepared a bulletin on weed eradication, and in speaking about such crops as Canadian thistle, quack grass and morning glory the summer fallow is recommended in accordance with the following plan:

Set apart the spots or fields that are foul with perennial weeds for one season and do not try to raise a crop. If following a grain crop or a crop of grass it may be wise to plow the land early in the autumn. But this is not always economy, since the frost does not kill the upturned roots, not even if they are turned over several times during the autumn. Let the weeds grow in the spring until nearly time to head out, pasturing if convenient to do so, then turn them under deeply and completely, by plowing the land as deep or even one or two inches deeper than it is usually plowed. At this period of growth the old root stalks will have given up the seed-like nourishment, which they stored up the year before, in helping form the new growth of leaves, stems and root stalks. These old root stalks will be ready to decay and the new root stalks, as yet green and succulent, will not have stored up in themselves food for another year, and they also will not resist decay long. The plants at this period are in their most active vegetative state and are not prepared with a supply of stored-up food in their root stalks to long endure a resting period. Simply plowing under is, however, only the commencement of the attack. The plants are full of active vigor and the young root stalks at once start up new leaves and stems. Leaves are a necessity to the plants at this time, and if we can prevent them having any of these "breathing and digesting" organs they will soon starve and the root stalks will die. To destroy all leaves it is necessary to thoroughly cultivate or occasionally plow the soil at short intervals of one to three weeks. In case the cultivating implement does not do quite thorough work, it is necessary to destroy the remaining blades with the hoe, since the rule should be to "not let the leaves see daylight."

By this plan many farmers have killed quack grass and other pests. While it has cost them the rental value of the land for one year, and the labor of several times' plowing and cultivating, they have plowed under some green manure, and have given the soil such a thorough summer fallowing that it is in fine condition for a crop the next season.

The first plowing as above mentioned is sufficiently early to destroy many weeds—even French weed, before they ripen seeds. The repeated cultivating and the occasional plowing brings other weed seeds into their germinating zone of soil and they are destroyed. In addition to the accumulated fertility, which is set free and stored up during the year, the summer fallow also conserves moisture for the next season's crop, and the cleaning, fertilizing and moistening of the soil does much to reduce the ultimate cost of this method of killing weeds. While the farmers who have followed this plan of entirely eradicating quack grass have good words for it, those who have each year for several seasons "nearly killed" this weed by fairly careful cultivation, but yet have it in their fields, are complaining that it costs them annually a great deal of labor to combat this pest, and it seems to have the mastery.

Where necessary and practical to do so, turn rows, and where the fence may be removed, fence rows and the borders

"Hide Your Light Under a Bushel?"

THE manufacturers of the Litchfield Spreader had this question put to them by a prominent machine man, he explaining at the time that if he was selling a spreader with the many advantages found in this no-choke endless conveyor, and which he could put out under a five-year guarantee, as we are doing with the Litchfield Spreader, that he would not "hide his light under a bushel," but would let the people know what he had. This put us to thinking, and as our readers know, we have been trying to place the actual facts and figures before our customers, so they could use their own judgment.

The reason why you do not hear more of the no-choke endless conveyor is because no machine uses it except the Litchfield. No other spreader can utilize this broadly-patented, mechanical device, and for this reason complimentary remarks from competition are not very freely given. This endless conveyor with the no-choking, swinging sections was developed because of a clearly apparent demand for the same, and the wonderful momentum given to the sales of the Litchfield Spreader, by reason of this one particular feature, is the best evidence we can offer of its rapidly increasing popularity.

It is a winner because all complicated machinery for returning it to its original starting point is unnecessary. It is a simple, plain, every-day affair, and does the business without the need of an expert mechanic to keep it in working order. There is no stopping except when you get through with it, and then it rests until another load is to be handled. The life is much longer than the other kind. It runs much more smoothly and gives much better general results and satisfaction. It is just the simple, plain, every-day conveyor which all spreaders should have, but which prior to the invention of the no-choke device was not practical in cold weather or under various other unfavorable conditions.

The only favor we ask is an opportunity to show our customers what this modern spreader will do, the only spreader made and sold under a guarantee of five years.

To be continued next week. We still have some Indian pictures left, and if you will give us the names of prospective spreader buyers, we want to trade.

The Rue Washer Washes.

THE Rue Washer is the only machine that forces air through the clothes. It is the only machine that employs the same scientific principle used on the old time washboard. It is made of the best quality galvanized iron; it will not dry up and fall to pieces; it will last a life time; it weighs only 50 pounds; it will not tear the clothes; it does the work, better, easier, quicker than any other machine in the market. Every machine is sold under the positive guarantee of the manufacturer. Ask your dealer for it. If he hasn't it write us. We will send it on trial. The price is only \$3 at your R. R. station.

Rue Mfg. Co., Mapleton, Minn.

HEAT YOUR HOUSE STORE, CHURCH or SCHOOL HOUSE WITH
Bovee's Compound Horizontal Furnace Radiator 11 YEARS ON THE MARKET.
THOUSANDS IN USE. BURNS ANY KIND OF FUEL.

Having BOVEE'S Improved Hot Blast Ventilating System and Return Circulating Radiator, which gives perfectly pure air and saves One-Third of the Fuel. Any handy man can properly install one of these furnaces with all connections in a short time. These furnaces absolutely make the best and most durable heating plant in use. Everything guaranteed to be first-class. We can save you 40 per cent on the cost of your heating plant, our price being but little more than good stoves. Send for catalog. We have the largest and best line of furnaces in use, including our Celebrated WATERLOO Furnace, complete for \$43. Manufactured and Sold by the BOVEE GRINDER & FURNACE WORKS, WATERLOO, IOWA

of public roads should be included in the summer fallow. This will avoid having the weeds again encroach upon the field from the surrounding land.

Doubtless there are many other ways of killing perennial weeds which would succeed, but farmers make a mistake in experimenting with theories of killing "by turning the roots up to the sun," by "exposing the roots to the action of the frost," and some other oft-recommended remedies. Methods which at once succeed are in the end the most economical.

G. A. R. MINNEAPOLIS.

Excursion via the Minneapolis & St. Louis R. R., the shortest, quickest and best way. This line has been chosen by the Crocker Post of Des Moines and many other posts as the "Official Route," and a special G. A. R. train will leave Des Moines at 11:30 a. m., August 13th, arriving Minneapolis 8:30 p. m. All comrades and their friends are invited to join this train.

In addition, the regular trains leave Des Moines 8:15 a. m. and 9:05 p. m., arriving Minneapolis 6:43 p. m. and 7:25 a. m. respectively. We distance all competitors. Note early arrival at Minneapolis. Morning train carries cafe parlor car, serving all meals. Night train free reclining chair car and new electric-lighted sleepers; also tourist sleeping

cars on August 13th. Double berth, accommodating two people, \$1.

Round trip from Des Moines \$5.95. Tickets on sale August 11, 12, 13 and 14. Limit August 31, with privilege of extension to September 30, on payment of 50 cents extra. Special rate one cent a mile from all other points.

Ask your agent to sell you via the M. & St. L. and you will have the best possible trip.

For further particulars, maps, etc., call on your local agent or address W. K. Adams, D. P. A., 512 Walnut St., Des Moines, Iowa.

ROUND TRIP SUMMER RATES VIA RAIL AND BOAT LINES.

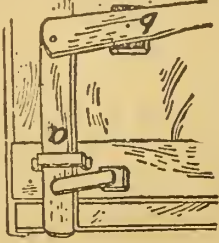

The Minneapolis & St. Louis Railroad will sell excursion tickets via rail lines to points in Minnesota, North Dakota, Manitoba, Montana, Oregon, Washington and California. Also, via Great Lakes route to eastern points. On sale daily with return limit October 31st, or until navigation closes. For further information call on or address W. K. Adams, D. P. A., or D. B. Ransburg, C. P. A., 512 Walnut St., Des Moines, Iowa.

\$5.95 TO ST. PAUL AND MINNEAPOLIS AND RETURN

Via Chicago Great Western Railway account G. A. R. National Encampment at Minneapolis August 13th to 18th. Tickets on sale August 11th to 14th. Return limit August 31st, with extension privilege. For further information apply to E. J. Sawyer, C. P. & T. A., 514 Walnut St., Des Moines, Iowa.

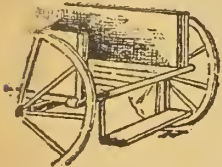

HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

The accompanying illustration from the Town and Country Journal of Australia, shows a simple but effective barn door latch, the details of construction being given plainly in the picture: The piece A works vertically behind an iron strip and catches behind a cleat fastened to the timber above the door. It should be long enough to be reached from the floor. It is manipulated by the lever B. This is a pin in the door below the lever to keep the latter from falling below. The advantage of this latch over the one-piece swinging lever is that

it never swings out where it would be in the way. It is self-adjustable in case the door sags. The piece can be adjusted to suit the size of the door. It is easily constructed and cheap, there being no materials other than those found on every farm.

The Farm Journal gives the following handy addition to farm wagon: Here is a step added to the rear end of a farm wagon, by means of two stout iron supports. This step will prove a great comfort. It saves a lot of strain in getting in and out of the wagon when unloading; and when one is lifting boxes, baskets or bags in or out,

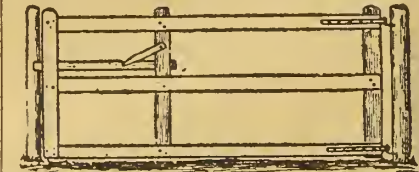

it is a halfway place on which to rest. Then, too, one can tip a box or barrel over on edge against the step and then lift the other end and tip it into the wagon. One person can easily load boxes and barrels in this way and not lift much more than half the weight at any time.

A Subscriber, in Successful Farming, describes a handy cabinet as follows: "Get some varnish cans and open one

side so as to have little drawers; make case of wood to hold these drawers. The dots in the corners are the screw caps. Mark names of contents on each can and you have a very handy cabinet for the workshop."

Mr. B. Obenschin writes Successful Farming as follows: "To remove broken sections from a sickle place the flat bar to which they are riveted edgewise upon a solid base and drive the section down, as indicated by the arrows. This cuts the rivets off and they drop out."

Mr. E. E. Lewis, of Ohio, sends the following to the Practical Farmer: "The illustration shows a good gate latch.

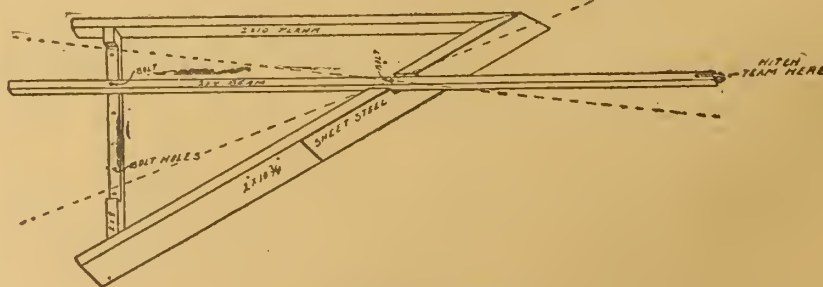

No danger of gate blowing open when latch is in position as shown. The sketch explains it all without further description."

The following from the Inter Ocean is in reply to an inquiry about tile drainage: "The tile should be placed below freezing. The practice used to be to place the tile a foot or so deep, but this is not followed to speak of in the present day. Three or four feet is not too deep. However, the nature of the soil has considerable to do with the depth. If the soil is porous the tile can be placed deeper than in compact soils. But in all cases the tile should be placed below the freezing point. Many of the tile will crumble after being frozen, and the drain will be obstructed. There are many ways of determining the amount of fall. In flat land, where

there is but a slight fall, a device may be made like the accompanying illustration. Take a straight two-by-six, sixteen feet long, marked in the cut as A. To this bolt an upright piece, B, at right angles with A and to the top of this attach a plumb line. At the lower end of the line you can attach a rule C. Set this device in the bottom of the ditch, with the left end toward the outlet of the ditch. If the latter is exactly level; that is, if it has no fall, the plumb line will stand exactly at 0 on the rule. If the ditch has any fall the plumb line will leave 0 and swing toward C. As soon as the fall under the device is determined, remove it the length of itself down the ditch and so on until the entire ditch has been inspected."

A ditch-cleaner is described in Farm, Field and Fireside by C. T. Baker, as follows: "In connection with the road-scraper a ditch-cleaner is used to pass the earth from the side ditches up the grade far enough for the road-scraper to reach it. This ditch-cleaner is made something after the fashion of a snow plow, but the left-hand side is made shorter and the side is made vertical, so

DITCH CLEANER.

that in practice this perpendicular side acts like a landslide. The other side is beveled something like a plowshare and is faced with steel. This side is made longer than the other, and it is this side that shoves the earth out of the

BLACK DIAMOND Ready Roofing

If you ask your neighbor what kind of roofing to get, he is likely to say Black Diamond. If he has had much experience with roofings he is sure to say it. 20,000 sq. ft. of Black Diamond covers this modern lumber shed at Terre Haute, Ind. Sooner or later people come to it. Other makers predict that their roofings will last five or six years. Black Diamond actually does last and has lasted over ten years and given satisfaction every minute of the time. We can prove it. Ask any other manufacturer to show you a roof of his that has lasted ten years and you will find he is unable to do it.

Write for a Sample and Booklet and let us convince you.

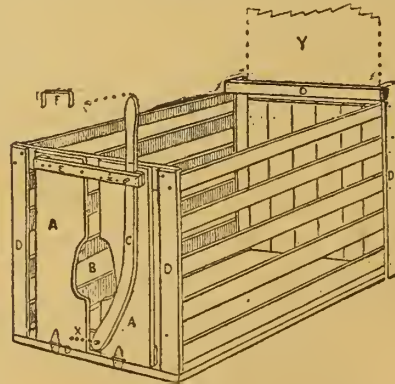

Address the nearest office of the

Barrett Manufacturing Co., Black Diamond Department

New York Chicago Cleveland Allegheny Kansas City St. Louis
Minneapolis Philadelphia New Orleans Cincinnati

ditch. The hitch is not at the point like a snow plow, but about ten inches to the right of the point, as shown in the illustration, which is adjustable."

Mr. C. Avery, of Indiana, writes the Ohio Farmer about his hog-ringing trap, as follows: "Subscribers who raise hogs may be interested in a ringing trap which I use, so I send sketch. The frame of trap is 2x4-inch pieces, D, D, and D, lapped and bolted at corners as shown, and a tight, smooth floor; also side and top boards are solidly nailed to inner edge of the frame, as shown, making a strong crate from which boards cannot be crowded off. Rear end is fitted with slide door to raise up as indicated by dotted line V. Front end has a door, AA, made of two thick, strong boards on inside cross cleats at top and bottom. A, A is joined at bottom by two

HOG RINGING TRAP.

strong hinges to frame D, and held up when in use by the iron clamp F, being placed down over top of door and frame, D. Door has a central opening B, below which are several bolt holes, for fastening an iron lever, C. The top of door also has wide cleat, E, bolted at one end with blocks behind to hold it out from door, so the other end will form a guide for lever C, which, when pulled forward, partially closes opening B, and firmly holds hog, with head through the opening. Lever C is fastened while in use by a spike nail inserted as shown, in one of several holes bored through side cleat and door at Z. Opening B is

measure. Place trap squarely with rear end close up to hog-house door, with lever C thrown back; raise slide door, drive in a hog and drop slide door behind him, and he will thrust his head through hole B. Pull lever C tight against his neck and insert spike to hold it there, and you can ring (as I have done) with ease, a hog weighing nearly 400 pounds."

JACK OF ALL TRADES.

In nine cases out of ten, when you see a man who is able to do all the odd jobs around the home, it is because he has the proper tools. Look over your outfit of home tools and see if they are fit to do any of the countless things that need to be done from day to day. Have you every tool needed, and are they all in good condition?

It is the simplest thing in the world to supply yourself with a complete set of tools, each the best of its kind. Just buy a Keen Kutter Tool Cabinet. It is a beautifully finished oak case, containing a set of tools for household use. Each tool in the Cabinet is one of the famous Keen Kutter brand. No expert could buy a better set of tools, for better tools are not made. The name and trade mark appear on each one and protect you against bad luck. If anything goes wrong because of defect in making you can have another tool or your money back.

The Keen Kutter Tool Cabinets contain large and small assortments of tools to suit different needs, and range in price from \$7.50 to \$100. Each tool in the outfit has a special rack or hook, so it will not be damaged by contact with other tools.

There are drawers in the Cabinets containing many accessories that are apt to be overlooked in a home kit that you collect for yourself.

Every Keen Kutter Tool Cabinet, from the smallest to the largest, is complete in every detail, and contains Saws, Braces, Bits, Chisels, Gimlets, Awls, Planes, Hammers, Hatchet, Files, Pliers, Screw-drivers, Wrenches, Nail Sets, Reamers, Rules, Squares—in fact, everything necessary for the ordinary home job.

Keen Kutter Tool Cabinets are for sale at the leading hardware stores.

The Keen Kutter Tool Cabinet Booklet will be sent free to anyone who asks for it by Simmons Hardware Company, St. Louis and New York, U. S. A.

HARVEST RATES.

The Minneapolis & St. Louis Railway will sell daily, during August, harvest tickets at special rate of \$14.50 from Des Moines to principal Minnesota and Dakota points, such as Fargo, Grand Forks, Minot, Devil's Lake, etc., with special certificate returning. We will also sell round-trip rates daily, until September 30th, good to return until October 31st to Fergus Falls and return, \$15; Detroit, Minn., and return, \$16.30; Minneapolis, N. D., and return, \$19.20; Devil's Lake, N. D., and return, \$19.75. Two solid through trains leave Des Moines 8:15 a. m. and 9:05 p. m., making the through connection with all northern lines. Call at city ticket office, 512 Walnut St., or address D. B. Ransburg, C. P. A., or W. K. Adams, D. P. A.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should have them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

TOWN WITHIN TOWNSHIP.

A Subscriber, Centerville, Iowa.—In a certain township there is an incorporated town which has its own street commissioner and road overseer, and makes its own levies for road and street purposes. (1) Is a citizen of said incorporated town eligible to the office of trustee of the township? (2) In such a case if a citizen of the town should exercise the duties and powers of township trustee, and levy taxes for road purposes in the township, would it not constitute taxation without representation?

Answer.—(1) There seems to be nothing in the code to prevent a resident of an incorporated town from holding the office of trustee of the township within which the town is situated. (2) We think not.

FIRE INSURANCE.

A Subscriber, Lamar, Mo.—Mr. H. insured his barn in the Barton County Mutual Fire and Lightning Insurance Company. There were lightning rods fastened on the barn when the policy was issued. Lightning struck the rods on the barn and ruined them, but the barn was saved. Can the insurance company be compelled to replace the rods?

Answer.—It is a difficult matter to determine exactly what rights the barn owner has, without a knowledge of what is contained in his policy of insurance. That instrument fixes the rights of the property owner, and the liability of the company. Without knowing what is in it, we would guess that the company is liable for the value of the rods, on general principles.

SHORTAGE IN LAND.

A Missouri Subscriber.—Two years ago A. and B. traded farms. A's farm was in Iowa and B's farm in Missouri. A's farm was described as 360 acres more or less, and B's farm was described as 371 40-100 acres without the words "more or less." According to the terms of the trade, A. paid B. \$35 per acre for one-half the difference in the number of acres, or \$467.50 for five and one-half acres. This computation occurred from splitting the difference. It has since been discovered that B's land falls short in acreage to the extent of about thirteen acres. (1) Can A. compel B. to pay for the full shortage, at \$85 per acre? (2) B. had a farm of 160 acres joining the land he traded to A., which he sold to C. after his trade with A., which he described in the deed as 160 acres more or less. This farm overruns about six acres, containing actually about 166 acres. Could B., without the consent of C., move the line over on C. so as to annex five acres of his land to A.'s land and to that extent make up the shortage mentioned in the first question?

Answer.—(1) A. can compel B. to refund all the money which A. paid B. for the difference in the size of the farms, and possibly about \$64 more for the excess of shortage over eleven and one-

half acres, but he will be lucky to get back the money he actually paid without a law suit. We think he could do this by a law suit. (2) He could not do anything of the kind. B. has no right whatever to move the division line bounding the land he sold to C. The sale to C. had nothing to do with the trade between A. and B.

TENANT'S FIXTURES.

A Subscriber, Nokomis, Ill.—B. leased A.'s farm by a verbal agreement and took possession as tenant. He built some outbuildings on the place, such as a tool shed joined to the corn crib, and a hen house joined in like manner. They are joined in such a way that they can be moved without any injury to the corn crib. B. obtained A.'s oral consent before the outbuildings were put up. B. still has possession of the place. Can he lawfully remove said outbuildings without A.'s consent?

Answer.—B. can lawfully remove the outbuildings without A.'s consent, at any time before he delivers up possession of the premises at the expiration of his tenancy.

NO LEGAL REMEDY.

Mr. J. A. Oills, Orr, Neb.—I rented my farm with house, barn and pastures to a person for one year from March 1, 1906. Without my consent the renter rented other lands on which there are many cockleburs, and he goes through that land with teams and stock to my barn and lots. There are no burs on my land. I told him no stock with burs on would be allowed on my place. He gives time and attention which are needed on my land to the other land he has rented. What recourse do I have by law?

Answer.—You have utterly failed to state any terms whatever of the renting contract. If there was nothing said in it about cockleburs, or about the renting of other land by the tenant, you have no legal remedy at all upon the facts you have stated.

PRIVATE RIGHTS IN HIGHWAY.

Mr. R. H. Gardner, La Porte City, Iowa.—A. and B. are neighbors. A creek crosses the public road in front of B.'s house, and flows through his land. When A.'s windmill is out of order he drives his cattle to water in the creek where it crosses the road. B. has fenced the approaches to the creek on his side of the road and has fenced across the creek on the piling of the bridge on his side. A. threatens to compel B. to remove this fencing so that A.'s cattle can go down to the creek on both sides of the road. (1) Can A. compel B. to remove the fence? (2) Has A. the right to water his cattle at the creek in the public road?

Answer.—(1) We do not think that A. can compel B. to remove the fence. (2) He has that right, provided he so does it as to not interfere with the rights of the public in the use of the road. He must not allow his cattle to obstruct the highway or disturb people in passing to and fro upon it.

RAILROAD FENCE—KANSAS.

A Kansas Subscriber.—Can a railroad company in Kansas be compelled to fence against swine, and if so, how?

Answer.—A person who owns land adjoining a railroad right of way, which he has enclosed on all sides, but the railroad side, with a lawful, or a hog tight fence, may demand of the railroad company, that it shall enclose its line next thereto with a lawful, or a hog tight fence, whichever the land owner has. If the company neglects or refuses to comply, the land owner may give it written notice to make such a fence within sixty days. If the company neglects or refuses to do so, the land owner may go upon the right of way, and make such a fence, and recover from the railroad company the value thereof, with 1 per cent a month interest, and reasonable attorney fee.

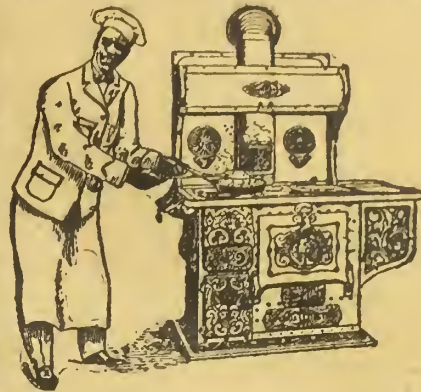

HERD LAW—TRESPASS.

Messrs. J. W. Pfander & Sons, Gravity, Iowa.—We have a neighbor living a mile and a half away who breeds and raises Short-horn cattle. We breed and raise Holsteins. Our neighbor allows his milk cows to run in the public road near my place more or less every summer. They have broken into my field from the roadside several times. The fence is not what would be called lawful. My barn is on the roadside, no fence between. On one occasion one of the barn doors was accidentally left open and ten head of my neighbor's stock got upon the barn floor and in the feed bins. I allowed my neighbor to come and get them without charge. Later six of his cattle got into my barn and I shut them up. He said he did not have to keep his cattle up—that the herd law had expired and he had a right to turn all his stock in the road and people must keep up lawful fences against them. (1) Is there a herd law in Iowa? (2) Can we recover damages on account of our neighbor's cattle breaking into the field, or doing damage in the barn? (3) Must we keep up lawful fences against neighbors' cattle to give us a right to damages for trespass? (4) If my Holstein bull gets into the road and does injury to my neighbor's cows can he recover damages?

Answer.—(1) We do not know whether the herd law provided by Section 444 of the code has been adopted in your county or not. (2) If the herd law is not in force in your county, you cannot recover damages from your neighbor, on account of the trespass of his cattle in your field or your barn, because

Meet Us At The Iowa State Fair.

AUGUST 24th TO 31st INCLUSIVE.

We want to make new acquaintances, renew old acquaintances and show you our Extensive and Complete line of up-to-date Steel and Cast Ranges and Cooks and Heaters of all kinds.

We Have Just What You Want.

It will pay you to investigate and we will take great pleasure in showing our goods.

A Belle City Thresher on farm of E. R. Foster, Roberts, Wis.

Save Your Threshing Bills

Individual threshing outfits are fast taking the place of the big contract threshers. Just think a moment and you will see why you should have one of your own, or own one jointly with neighbors. You thresh when your grain is in its prime, from the shock or stack. You don't have to wait for the job thresher, and then thresh whether or no, wet or dry. You don't have a big crew to feed. You and your neighbors can exchange work—all the help you need.

Belle City Small Threshers

are the best type of small threshers made. They save all the grain. They run on light power, with small crew and thresh up to 1,000 bushels of wheat a day. Thresh any kind of grain or grass seed. Compact, strong and durable, and so light that they are easily moved anywhere. Write and let us mail you catalogue which explains fully.

We also make Ensilage Cutters, Horse Powers, Saw Frames, Farm Hand Carts, etc. Separate book describes each. Write for one wanted.

BELLE CITY MFG. COMPANY, Box 34, RACINE, WISCONSIN.

ABOUT THE SOUTH

"About the South" is the name of a 64-page illustrated pamphlet issued by the Passenger Department of the

Illinois Central R. R. Co.

In which important questions are tersely answered in brief articles about

Southern Farm Lands
Mississippi Valley Cotton Lands,
Truck Farming, Fruit Growing,
Stock Raising, Dairying,
Grasses and Forage, Soils,
Market Facilities,
and Southern Immigration

along the lines of the Illinois Central and Yazoo & Mississippi Valley railroads, in the states of Kentucky, Tennessee, Mississippi and Louisiana, including the famous

YAZOO VALLEY

of Mississippi.

Send for a free copy to J. F. Merry, A. G. P. A., I. C. R. R., Dubuque, Iowa. Information concerning rates and train service to the South via the Illinois Central can be had of agents of connecting lines, or by addressing
A. H. HANSON, G. P. A., Chicago, Ill.

go Great Western Railway provides everything possible for the comfort of their passengers. Any information you may desire always cheerfully given at City Ticket Office, 514 Walnut St., or either Phone 423, Des Moines, Iowa.

LAKE AND RAIL TRIPS.

During the summer months the Chicago Great Western Railway sells tickets via all steamship lines on Great Lakes in connection with their line to Chicago, or St. Paul and Duluth. From this time until September is the time to sail the lakes and see Duluth, Superior, Isle Royale, the Copper Range, Sault Ste Marie, Mackinac Island, Detroit, Toledo, Cleveland, Erie, Buffalo, Niagara Falls and other points of interest. Call or write for full information. E. J. Sawyer, C. T. A., 514 Walnut St., Des Moines, Iowa.

BEFORE YOU
BUY A
MANURE SPREADER

SEE that its frame and sills are made of oak; that it has a ball and socket joint on front axle to prevent racking and twisting and steel braces and steel truss rods to guard against warping and sagging. See that the apron does not run backward and forward on hilly ground but insist on a positive and continuous apron drive.

See that it is practically automatic and so simple that any boy who can drive a team can run it as well as any man and control its every operation without leaving the seat. The

Appleton Manure Spreader
has all these improved features and many others equally important. Write to-day for free catalogue and special prices and terms.

VETERINARY MATTERS

PROFESSIONAL veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their addresses. No question will be answered by mail unless accompanied by a fee of \$1.00. In order that correct information may be given, the symptoms should be accurately described, stating of how long standstill, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

INJURED PELVIS.

I have a three-year-old bay mare, weighing 1,150 pounds, that got down about two months ago when foaling, and had to be helped up. She seemed weak in the hips for ten or fifteen days, and the muscle between the hip and point of the rump began to shrink on both sides. It went down worse on the left side, but has not become any worse in the last month. I have not worked her any since she foaled and she is in fine flesh. Please inform me what the trouble is with her.

Marc probably fractured her pelvis, or had nerves so affected that nutrition of parts was impaired. Such cases are common, and recovery takes place in time if mare is kept upon good pasture and well-fed without work for a season. It would be unwise to breed her at present. If the pelvis was known to be fractured, she should not again be used for breeding purposes.

SUN SCALD.

I have a little white sow pig about four months old. She seemed to do well until about a month or six weeks ago when I turned her out in a patch of rape with some other pigs. The other pigs seemed to fight her so that some times she did not come up to eat, but just lay in the rape. Then I noticed that her ears were peeling off and also her hair came off. It later healed up, but is now peeling off again and is much worse this time, peeling off so deep that it leaves her skin like a piece of raw meat. I have been putting turpentine and sweet oil on the sores. She looked just as if she had been scalded. Is there anything I can do for her?

See recent answers under this head. She has been scalded by pasturing wet rape, and then going in the sun. Keep her out of wet growths of green stuff and apply sulphur ointment to sores. If this does not avail, apply benzoated oxide of zinc ointment.

THUMPS.

(1) I have a spring pig that acts like it had the thumps. It had a cough, then lost appetite and now eats hardly anything. It weighed about seventy-five pounds, but is getting pretty weak now. I am feeding separated milk twice daily and corn. Have plenty of good pasture. This pig has been this way about two weeks and now there is another one that seems to be getting the same disease. I have not tried any remedy yet. If it is thumps, can it be cured, and how? (2) I have an old sow with pigs that will not eat corn. She eats grass, but mopes around and doesn't seem to care whether she eats or not.

(1) The disease is due to over-feeding and lack of exercise, and corn fed to young pigs is more likely to cause it than any other food. It is scarcely worth while trying to cure a single affected pig, but it may be done, in some cases, by administering a dose of castor oil to move the bowels freely and by then giving alternate fifteen-drop doses of tinctures of opium and digitalis every four hours until distress subsides. It is better far to prevent the disease by feeding ni-

trogenous rations such as milk, middlings, flaxseed meal, ground oats and similar food with dried blood meal or tankage and lime water, and allowing free exercise on green food, such as clover or rape. (2) The sow is better without the corn. Feed her the slop mentioned. The nursing sow should not eat corn.

PUFFS.

I have a yearling filly which had three puffs come on her hock joint about three weeks ago. I have been running them down with my hands, which seems to do no good. Can you tell me what to do for her?

If they do not disappear as filly grows, remove hair and blister the joint with cerate of cantharides. Such "puffs" constitute "bog spavin" when permanent, and usually come, in young colts, from affected parents.

OBSTINATE WOUND.

I had a horse cut on wire last January, and have done all I could to heal the wound, but it will not heal. I have kept proud flesh down by the use of medicine. If you can advise me what to do to heal the wound I will be very grateful.

Wet wound several times daily with a lotion composed of half an ounce of chlorid of zinc, two drams of hydrochloric acid and two ounces of sulphate of zinc in a pint of water. Keep horse from getting at wound with his teeth.

PARALYSIS.

What is the trouble with my pigs? They are three months old and get weak in their hind legs and drag them straight behind them. Then in three or four days they get down and die; they seem to suffer a great deal; they roll their eyes and throw their heads back and breathe very hard. Their feed is corn, sour milk, with clover and timothy pasture. The little pigs are the only ones affected; they are not weaned yet.

See numerous answers under this head in recent issues of the paper. The disease will persist as long as farmers neglect advice and continue to stuff hogs on corn.

HEAT EXHAUSTION.

I have a six-year-old black horse which I think got too hot a few days ago. I was plowing with him on a very hot and oppressive day, when he suddenly began panting. Since then with the least bit of work he pants very bad. Is there anything I can do for him?

As a rule, a horse is never much use in hot weather after suffering an attack such as you mention. He will be all right in winter, but unable to stand work in hot weather. Distress may be relieved by clipping the horse, shading his head while at work, allowing frequent drinks of cold water, feeding light rations during hot weather, with oats in place of corn, and no hay at noon.

WORMS.

I have a colt, a year old in May, that is failing in flesh and acts very stupid and dead, and does not seem to have any life about it. When I turned it out last spring it was fat, but for about six weeks it has been getting poor, becoming worse all the time. It has a good appetite and has a good coat of hair. I have not heard it cough. Can you tell me what to do for it?

If you find that lining membrane of eyelids and mouth is pale and there is a fur of scurfy substance about anus, worms are causing the emaciation. This we think is the cause in the case described, and we would advise administering a tablespoonful of turpentine, once every ten days for three doses, in a pint of milk and raw eggs beaten together. Allow free access to a box containing a mixture of four parts barrel salt, two parts flowers of sulphur and one part each of dried sulphate of iron and powdered gentian root. Feed well on oats and bran. Keep off old pasture

and from watering troughs or places used by adult horses. Provide fresh pasture, or feed out fodder, etc.

WEAK SOWS.

Can you tell me what is the matter with my sows? I had three or four to lose their pigs last spring, and they seem to be weak now in the hind legs or hips, I cannot tell which. They will be walking along when all at once their hind legs will stretch out behind them and they will drag their hind parts a few steps and get up and go on. I bred these sows again, but they are not heavy yet. They have been running on good clover pasture and have not had any corn.

While these sows have not had corn lately, they come from corn fed "lard" hogs and are weak in bone and muscle of constitution. They should be well-fed upon nitrogenous rations in addition to free range on green food, but would be better away from the timber pasture if it contains weeds. If known to be infested with worms they should have the turpentine treatment so often prescribed here. It cannot, however, safely be given to pregnant sows.

BLOODY MILK.

Please tell me what makes our cow give bloody milk out of one teat. Sometimes it clears up to natural and then again it is thick blood. She has been that way nearly all summer.

See other answers on this subject in back numbers of the paper. As the attacks come and go it would be wise to have the cow tested with tuberculin, as the cause may be tuberculosis of the udder, which would make the milk dangerous as a human food. If it proves to be due to rupture of small blood vessels and not to tuberculosis give two drams of dilute sulphuric acid in drinking water twice daily and three times daily sponge udder with cold water for ten minutes and then with a lotion composed of two drams each of powdered alum, sulphuric acid and one ounce of tincture of arnica in a pint of cold water. Milking should be carefully done; also the floor of stall should be deeply bedded.

SICK SHEEP.

Last spring I fed quite a number of western lambs and lost a few of them. When they would get up they would run with their heads down, shaking them more or less. Some would die in a day after they got down, and some lived two weeks. Their ration was shelled corn, good tame hay, and sheep oats. Where can I get a good book on sheep and hees?

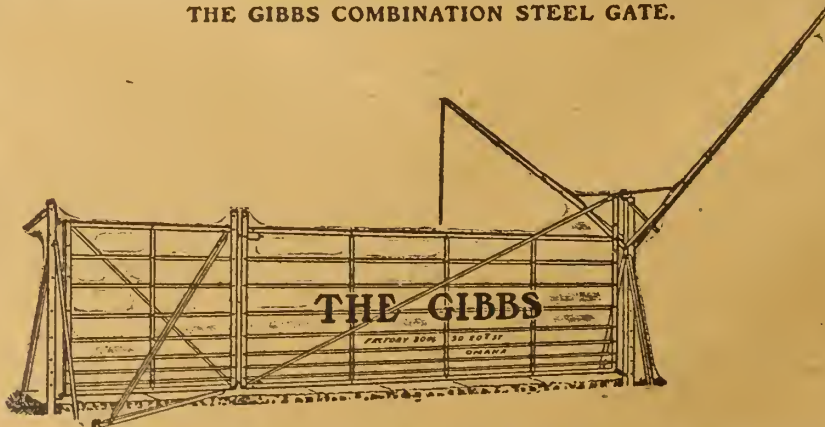

Grubs in the upper passages of sinuses of the head sometimes cause symptoms such as you describe and may even cause death if brain should become affected. As a rule, however, we find that the grubs cause irritation and the staggering and other symptoms characteristic of presence of grubs in the head while some other trouble is aggravated to a fatal stage by the thriftlessness due to grubs. In most instances the fatal disease is some complication of the liver. You will find information on this and other diseases of sheep in "The Sheep" by Dr. Rushworth, which may be ordered through this office.

SUMMER VACATION IN COLORADO. LOW RATES VIA ROCK ISLAND LINES. Colorado, as a place for recreation, is the choice of many thousands of summer tourists.

Colorado is a land of clear, pure air and golden sunshine. It is a land of sparkling mountain streams and glassy-surfaced lakes. There are more enjoyable things to do, more grand sights to see in Colorado than any other place under the sun.

From June 1 to September 30 Rock Island Lines will sell summer tourist tickets at rate of \$21.75 from Des Moines, Iowa, to Denver, Colorado Springs or Pueblo and return. Return limit October 31. July 10 to 15, inclu-

THE GIBBS COMBINATION STEEL GATE.

The accompanying illustration is a representation of the Gibbs Automatic Combination Gate, now considered one of the best gates on the market. This gate is made out of channel steel bars, and will last a life time. It always swings away from the team, therefore never scares them. It is made on the most scientific principles, and is one of the gates that never gets out of order. The illustration shows the extension, to be used when hauling wide machinery which will not go through the ordinary gate. This gate can be so adjusted that it will never get out of plumb. Write Mr. Ed B. Gibbs, Omaha, Neb., for illustrated circular, describing every part of this gate and you will be sure to negotiate for one.

Lump Jaw

The first remedy to cure Lump Jaw was

Fleming's Lump Jaw Cure

and it remains today the standard treatment, with years of success back of it, known to be a cure and guaranteed to cure. Don't experiment with substitutes or imitations. Use it, no matter how old or bad the case or what else you may have tried—your money back if Fleming's Lump Jaw Cure ever fails. Our fair plan of selling, together with exhaustive information on Lump Jaw and its treatment, is given in

Fleming's Vest-Pocket

Veterinary Adviser

Most complete veterinary book ever printed to be given away. Durable bound, indexed and illustrated. Write us for a free copy.

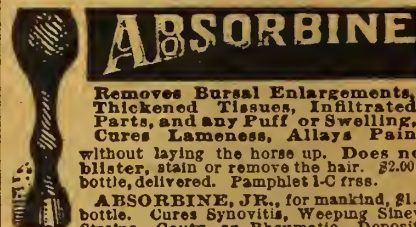

FLEMING BROS., Chemists, 210 Union Stock Yards, Chicago, Ill.

DIPPING TIME

Is happy because he is being freed from lice that torture and torment. August, September, October, are best months to dip hogs to kill lice. DIP-OLINE, the best Hog Dip, works quickly and thoroughly. It kills Hog Lice, destroys all disease germs, prevents Hog Cholera, saves loss, keeps your hogs healthy and growing. Every hog-raiser needs it. DIP-OLINE is easy to use; the cheapest hog insurance you can buy. Write for booklet and enough dip to make a gallon, FREE.

MARSHALL OIL CO., Box 7, Marshalltown, Iowa.

ABSORBINE

Removes Bursal Enlargements, Thickened Tissues, Infiltrated Parts, and any Puff or Swelling. Cures Lameness, Allays Pain without laying the horse up. Does not blister, stain or remove the hair. \$2.00 a bottle, delivered. Pamphlet I-C free.

ABSORBINE, JR., for mankind, \$1.00 bottle. Cures Synovitis, Weeping Sinew, Strains, Gouty or Rheumatic Deposits, reduces Varicose Veins, Varicocoe, Hydrocele. Allays pain. Book free. Genuine sold only by W. F. Young, P. D. F., 40 Monmouth St., Springfield, Mass.

Cures Kicks, Runaways, Pullers, Shyers, etc. Send for Bit on Ten Days' Trial and circular showing the four distinct ways of using it. Prof. J. A. Beery, Pleasant Hill, Ohio.

DEATH TO HEAVEN Guaranteed. NEWTON'S HEAVE AND COUGH CURE A VETERINARY SPECIFIC. 14 years sale. One to two cans will cure Heaves. \$1.00 per can. Of dealers, or express prepaid. Send for booklet. The Newton Remedy Co., Toledo, O.

A. S. ALEXANDER, V. S. MADISON, WIS. Veterinary Editor The Homestead. CONSULTING VETERINARIAN. Advice and prescription by mail, \$1.00.

slve, the special round-trip rate of \$19.25 from Des Moines, Iowa, is effective. This latter rate is authorized on account of the Elks' Annual Meeting at Denver July 16 to 21. Tickets limited to return to August 20.

Very low rates will also be in effect to Glenwood Springs, Colo., Salt Lake City and Ogden, Utah, Yellowstone National Park and to the Pacific Coast, with cheap rates for side trips to nearby points of interest en route.

New and improved train service via the Rock Island is an important feature for the Colorado traveler to consider.

Full details of rates, routes, service and any information desired will be gladly furnished by the Rock Island Ticket Agent at 423 Walnut St., Des Moines, Iowa. Geo. R. Kline, C. P. A.

GRAND ARMY VETERANS.

Do not be misled into the belief that any other line can give you the service from Iowa to Minneapolis and St. Paul and return that the Chicago Great Western Railway can, and does, furnish. We are the only line from Des Moines and vicinity which has three daily regular through trains to and from the Twin Cities. On August 11th, 12th, 13th and 14th the Chicago Great Western Railway will have on sale round-trip tickets at rate of one cent per mile (\$5.95 from Des Moines); tickets having limit of August 31st to return, with extension privilege to September 30th on payment of fifty cents. Sleeping car rates, \$2 standard, and \$1 tourist. On August 13th the Chicago Great Western Railway will have a special train from Des Moines at 8:30 a. m., arriving at St. Paul and Minneapolis in the early evening. For full information address E. J. Sawyer, G. T. A., 514 Walnut St., Des Moines, Iowa.

Warranted to give satisfaction.

GOMBAULT'S CAUSTIC BALSAM

A safe, speedy and positive cure for

Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.

Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.

OUR DAIRY DEPARTMENT

All communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

THE KICKING COW.

The kicking cow is generally the product of a quick-tempered attendant. It stands to reason that things will happen sometimes that will cause a cow to start suddenly, and, on a pinch, cause her to defend herself in nature's way. When this occurs there is presented an opportunity for the man behind the cow or the man beside the cow to cultivate his patience under trying circumstances. We have seen many a kicker completely broken of the practice by changing milkers and by giving the excitable animal kind treatment always.

Sometimes, however, kind treatment is not enough, and means must be taken in certain cases to prevent actual injury to the attendant. The easiest plan is to cinch a rope tightly around the cow's body, passing it over her kidneys and around in front of the udder. This really brings about a case of semi-paralysis, and no cow can do much damage with a strong rope tightly adjusted in this manner. The objection to the plan is that in some instances it interferes with the flow of milk.

The other plan that we have in mind is that of tying the hind legs together by the use of a strong rope. Wind the middle of a six or eight-foot rope twice around the hind leg above the hock joint, then cross the ends between the legs and pass twice around the other one and tie firmly. There may be a little excitement on the start when an animal finds that she is secured, and occasionally there is actually a little danger of injury. We have seen instances where cows would throw themselves rather than submit to such tying, but as a rule they soon give in. In the majority of cases there will be no fuss after the first few minutes, as the

average cow soon submits. An application of a rope tied in this way a few times will generally do the business, though in the meantime it is necessary to use the animal with a marked degree of kindness so that confidence in her attendant is fully restored.

The Sire in the Dairy Herd.

The bull is said to be "half of the herd," but in a herd of poor grades or native cows he is very much more than half. All of you can afford a good bull, even if you have to buy him when a calf and await his development. By all means buy a registered bull, but don't buy him just because he is registered. There are a lot of them registered that you have no business with, and that ought not to be registered. Get the pedigree of the bull you contemplate buying, find out what his sire was and the dam of his sire, and be still more particular to find out just what kind of a cow his own dam is. Go slow on this subject and buy the very best dairy-bred bull you can. Pay not so much attention to his ancestors' prize winnings at the fairs, as to what they can do at the pail and churn. Look for steady records all the way back in the pedigree, and do not seek for one or two sensational records; do not put too much stress on noted animals far back in the pedigree, but look more to those closer up.

Try to be sure you are buying from a reputable breeder; get quotations from several of this class and compare them; then when you have selected two or three bulls that you think will just suit you, write the owner of each, and get from him (if he has not already sent you) full information regarding the sire and dam, grandsire and granddam of the bull you think of buying—don't be afraid to ask him any question you want to know. Remember that it means a lot to you not to make a mistake right here. After you have bought your bull and get him home, give him the best place to stay that you can, and a small pasture to run in, if possible, but do not let him run with your cows. Always lead him with a staff, be kind with him, and you will not likely have a vicious bull to deal with.

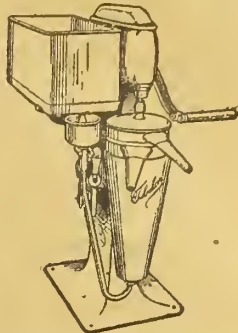

Keep this bull until a number of his calves have milked a good part of the first year—and keep all of his first, heifer calves that you can out of your best cows. If the heifers show good improvement over their dams you can feel that you are on the right track, and then you will want another bull to cross onto your heifers. My advice is to get a bull out of the same dam as your old bull, or out of her best daughters, and sired by a bull that has been bred to them with success before. You will find that your bull has nicked better with some of your cows than with others. Always keep the best heifers and calves with them. You will now gradually be selling off your old cows and keeping your improved heifers. About the second cross you make you will find some of the heifers giving more milk and making more butter with their first calves than their grandmothers ever made for you in the prime of their lives. Then you will begin to realize what this improvement really means.—(Address by A. S. Ennis before Missouri Dairymen's Association.)

Modern Methods of Testing Milk and Milk Products.

The above is the title of a book recently published by the Orange Judd Farmer, of New York, the author of which is Prof. L. L. Van Slyke, of the New York Experiment Station. This book has been prepared for the use of dairy students, buttermakers, cheesemakers, producers of milk, operators in condenseries, managers of milk shipping stations, milk inspectors, etc. An accurate conception of the character of this book may be obtained from the titles of the chapters, which are as follows: Chemistry of Cows' Milk and Milk Products; Methods of Sampling Milk; the Babcock Test—Description of Apparatus and Materials; Method of Operating the Babcock Test; Method of Testing Skim-milk, Whey, Butter, Cheese, etc., by the Babcock Test; Methods of Testing the Bacterial Acidity of Milk and Milk Products; Methods of Testing the Bacterial Condition of Milk; Methods of Testing Milk by Rennet Extract and Pepsin; Methods of Testing Specific Gravity and Solids of Milk by the Lactometer; Methods of Testing Milk and Milk Products for Adulterations; The Babcock Test Applied to Farm Conditions; Methods of Commercial Testing and Scoring of But-

Because You Need The Money

It's your business and if you don't attend to it, who will? You cannot afford to keep cows for fun. That isn't business, and, furthermore, it isn't necessary. There is money in cow keeping if you go at it right, and besides there is more fun in going at it right than there is in staying wrong.

You need a Tubular Cream Separator because it will make money for you; because it saves labor; because it saves time; because it means all the difference between cow profits and cow losses.

Look into this matter; see what a Tubular will do for you and buy one because you need it.

How would you like our book "Business Dairying" and our catalog B. 121 both free. Write for them.

The Sharples Separator Co.
West Chester, Pa.
Toronto, Can. Chicago, Ill.

How's Your Separator?

We will take your old separator in exchange on purchases of either new or second hand machines. We also sell you direct, a good as new second hand, or a new separator, any make, cash or time and save you money. Write for list and prices.

Richmond Cream Separator Co.
Richmond, Missouri

You Want All The Cream

Therefore You Want the

Iowa Dairy Separator

No other Separator made extracts every particle of cream. Some is always left, and this "some" is your loss.

The "IOWA" does not take part of the cream part of the time. If it did, it would be no better than the others; but it takes all the cream all the time. A Separator that does less than this you cannot afford to buy. Gold medals at World's Fair and Portland mean something. Write today and ask for catalog 25. It's free, and you will find your investment of one cent in a postal card the best you ever made. All sizes from 250 to 750 pounds. Address,

The Iowa Dairy Separator Co.,
Waterloo, Iowa.

When writing please mention this paper.

"CHEAPEST" CREAM SEPARATOR.

The really "cheap" cream separator, like all other machines, is the one which will perform your work in the most profitable and satisfactory manner, and last the greatest number of years. A cream separator which wears out in two years is worth only one-fifth of what the one is that lasts ten years.

DE LAVAL CREAM SEPARATORS have proven to be capable of lasting from fifteen to twenty-five years. The very best of other separators at the most cannot last more than five or six years. The poorest ones become "junk" within a few months and represent simply a pure waste of money to buyers of such machines. "Cheapest" in first cost does not mean "cheapest" in the end, nor does the manufacturer's unenforceable guarantee mean that you are getting the most for your money. Low prices and extravagant guarantees are the capital stock of the "fakir." Before buying a separator write for a DE LAVAL catalogue of "durability" facts and reasons. It will cost you nothing to know the truth.

POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

TWO-HUNDRED-EGG HEN.

Several years ago the two-hundred-egg hen was thought to be a freak or an accident. The idea that a hen should lay two hundred eggs in one year, or more than an egg every other day, to say nothing of the time devoted to molting and rearing a brood, was unthought of. Wise poultrymen looked at each other and said such hens were exceptions and to make the number greater than a very few would be an impossibility. We desire to state that the two-hundred-egg hen is more common than most people are willing to admit. She may be much in evidence in flocks where there is no means of knowing how many eggs a hen lays.

An eastern breeder who employs trap nests has found that out of over two hundred pullets hatched eleven of them proved to be two-hundred-egg hens. These eleven hens again placed in an experimental yard produced one hundred pullets and among them were twelve two-hundred-egg hens. From these twelve hens one hundred and twenty pullets were reared, among which were fourteen two-hundred-egg producers. It would seem by this experiment that the increase in good layers is not extensive, but it appears to be sure.

Another factor in the two-hundred-egg hen is that the number of eggs one will lay the second year is altogether problematical. Some will lay almost as well the second year as they did the first, and others will do even worse than some of the inferior layers. This same breeder reports one instance where a hen that laid 241 eggs in her pullet year produced 196 the second laying year, and nearly all of these eggs were fertile, while another hen having a record of 233 eggs the first year, produced but forty-eight in the second twelve months. Both hens appeared to be in excellent health, and the breeder attributed the difference to greater stamina in the ancestors of the two-year producer or better fertilization of the egg from which she was hatched, which enabled her to withstand the strain of long and continuous laying. She had a power to eat and assimilate large quantities of food, for a hen of her weight, and this food

was turned into the proper channel. The other hen was a good feeder, but did not eat nearly as much as the first hen.

There is more in the two-hundred-egg hen than her mere production. She must be properly fed, or all will result in failure. The food given should contain all the elements necessary for the production of eggs and at the same time the body must be maintained. In addition to the feed, the hen must have comfortable surroundings. Many pullets may be capable of producing two hundred eggs per year and not do it because they are not properly fed or housed. It is barely possible that many two-hundred-egg hens are now engaged in laying two or three dozens of eggs annually. The maximum result is only obtained by the best of treatment in all instances. As with all kinds of good stock, breeding is the foundation and there should go with this good feeding.

WATER AND SHADE.

In summer time nothing is more essential than a plentiful supply of fresh water and shade. As a rule the best plan for supplying water is to use water fountains to be found in poultry supply stores. These are the best because they give the best satisfaction and are the most economical in the long run. Such devices are easily kept clean and the water is kept pure which is quite a factor in the poultry business.

A basin may be filled with pebbles about as large as hens' eggs and then let down in the ground so the top edge will be about an inch above the surface of the ground. The water is poured in the basin and the chicks can drink between the rocks without getting themselves wet. The rocks are said to

Summer and Fall Planting for Strawberries

To the Editor of The Homestead:

The following inquiry comes from a subscriber at LeMars, Iowa:

Will you give some information in the next issue of your paper in regard to planting strawberries in July? Also, would it do to use plants which have borne fruit?

The proper time to set strawberry plants is in the spring as early as the ground is in condition to be worked. Much has been said and written in regard to planting in the summer and fall, and many attempts have been made in this direction with the same almost universal result—failure.

The strawberry needs the whole season in which to establish a good root system and build up fruit crowns. Plants set in the summer do not have this opportunity and therefore fail to be productive.

The strawberry plant which is taken up and set out has two functions to perform, both of which it can do well if it has the entire season. The first function is to make crowns with which to bear fruit the following season. The other is to become the mother of other plants by means of its runners. A plant set in June or later cannot fulfill both these functions and weak crowns and weak plants are the result.

A great many nurserymen advocate fall planting for strawberries. Their motive for doing so is selfish and unscrupulous. By filling orders at this time they can have the work done at a slack time when help is plenty, they avoid the danger of winter killing of the plants, and everything which has a root counts, while had they waited until spring a great many of the poorer plants would have died from their own weakness.

As for using plants which have fruited, this should not be done. An old strawberry plant has a tough, woody root which cannot support the plant and allow it to perform its work. In digging

strawberry plants the old ones may easily be recognized by this condition of the roots, and such should always be rejected.

In no other agricultural venture have as many failures been recorded as in the growing of strawberries. From my own experience and observation I can say that the cause of nearly every failure is the failure to observe some cardinal rule of proper berry culture. In this connection it would perhaps be well to lay down the precept that he who would raise strawberries should plant only strong young plants in early spring and give them the best possible cultivation and attention.

WITH THE EDITOR.

For some time past it has been my intention to write an article or two on school matters. The dialogue which appeared last week "With the Editor," I intended to follow up this week. While I was thinking and trying to shape my thoughts, I came across an article which, though written from another point of view, said all I hoped to say and said it very much better than I could hope to say it. It occurred to me that the best thing to do was to cull the most important paragraphs, group them, and pass them on to our readers with a word of explanation and preface.

The New York Journal's editorial is, in a sense, simply a plea for recognition of the value of the teacher. But it should be remembered that the teacher makes the school. Also it should be remembered that those communities paying a mere pittance for school purposes and so carrying themselves toward the teacher that generous, whole-souled service is as improbable as fine equipment, need to be brought to a realization of what the teacher's services are and how they should be remunerated. Almost always returns are in proportion to investment. Hence the wisdom of making the teaching profession attractive. The importance of making the rewards of the profession such that it will attract persons of large gifts and fine character is nowhere realized as it should be, but it is less appreciated in rural districts than elsewhere. The consequence is that, to a distressing degree, the country school is a football, tossed from one girl, from one lad, to another—the girl teaches a few terms until she marries, the lad a few terms to help pay his way through college—and the children suffer accordingly. It is earnestly hoped that the following article may rouse thought and result in the formation of more healthy public sentiment.

MOST IMPORTANT PEOPLE IN THE WORLD TODAY—"MANUFACTURERS OF THOUGHT," GREAT "CAPTAINS" OF BRAIN INDUSTRY, MOLDERS OF FUTURE AGES—ARE THE SCHOOL TEACHERS.

The public school teacher is the Christopher Columbus of the intellect. In the millions of unexplored brains among the school children of this country there is wealth far exceeding the material wealth of the continent that Columbus gave to the world.

This is the first century of universal reading; the first time in all the centuries of human life that the use of the brain has become universal through education.

In the generations past men have learned to use their fingers, their bows and arrows, spears, ox-carts, locomotives, bicycles, wireless telegraph, etc. They have conquered some of the powers of Nature.

But among the great mass of the people the greatest natural force of all, the force of the brain, has been neglected.

Those electricians and mechanics who harnessed Niagara were like children playing with paper windmills when compared to the American public school teacher, who is harnessing the brain of this Nation.

In that brain lies the power that is going to do the great work, the work for which the world has been waiting through the centuries—the work of emancipation from poverty, from industrial slavery and all the other sorrows that follow in the wake of ignorance.

The school teacher is the great thought manufacturer. Into his hands come the thousands of young minds that need direction and guidance, that by proper teaching are capable of almost unlimited development.

Behind each of the teachers one's imagination sees stretching out a long line of hundreds and even thousands of children. That long and mighty line of the future is the real hope of the present. For who would care to live, or feel his living earned, if he were not trying to make the future days better for future men, as those behind him struggled to make this day better for us?

The school teacher's career calls for great unselfishness, real devotion to duty.

The world has not realized yet what is due to children and what is due to those who teach children.

The man at the head of a petty court is gladly paid ten thousand dollars a year or more for fining and imprisoning unfortunate drunkards, for regulating the human refuse of the world.

The man in the court of education, the man who is fighting drunkenness in the future, fighting crime and building the nation of the future, is grudgingly paid a fifth or a tenth

of the reward that goes cheerfully to men doing work infinitely less worthy.

The teacher is as unselfish as those coral insects that work deep in the blue sea, slowly, patiently raising an island—a glorious addition to the world—which they are destined never to see.

The teachers are patiently building up a better state of society, a better people. There is no progress except through knowledge.

The school teacher is the enemy of superstition, of bigotry, of ignorance, of all the spiritual foes of mankind.

We speak patronizingly of the Dark Ages, but these are the dark ages. And the teachers are the light bearers, the Lucifer's tree from pride, doing their great work for the future in self-abnegation.

Teachers are not only important because they educate the children, but also important because they educate the parents of the children.

When the public school shall have existed for a century or more all the parents of the country will be teachers, and the labor of the school teacher will be greatly lightened.

The public school teachers are the most marvelous family men in the world's history. They are the intellectual fathers of thousands of children and of grown men and women. Theirs is a very great opportunity and responsibility.

The mind of the next generation will reflect not the mind of the editor or the clergyman or the literary individual of today, but the mind of the public school teacher.

There is no question that the public should gladly and eagerly make it possible for the school teachers to live in comfort, free from anxiety as to their future, well rewarded for good work in the present.

A nation rich enough to pay nearly \$200,000,000 a year in pensions to good men that helped to kill enemies should be willing to pay those more important men who are helping to bring about the day when killing will stop, who are giving to the nation the only real asset that it has—the good and enlightened citizen.

HOME AND HOME MAKING.

LITTLE HELPS BY THE WAY.

When'er a noble deed is wrought,
When'er is spoken a noble thought,
Our hearts in glad surprise
To higher levels rise.

The tidal wave of deeper souls
Into our inmost being rolls
And lifts us unawares
Out of all meaner cares.

Honor to those whose words or deeds
Thus help us in our daily needs,
And by their overflow
Raise us from what is low.
—Longfellow.

DISCOVERED IT FOR HIMSELF.

"I meant to have told you of that hole," said the kindly host to his friend who had suddenly disappeared in the course of a stroll through the grounds into a pit full of water. The friend climbed out and shook himself. "It doesn't matter," he said cheerily, "I found it."

GOWNS FOR STOUT WOMEN.

Don't wear wide belts.
Don't wear a tight-fitting coat.
Don't trim a skirt except at the bottom.
Don't wear a sleeve that is full below the elbow.

Don't use frills of any kind on a gown if you are stout. Use flat trimmings.
Don't wear bow ties. Wear something small and narrow if a tie is required.

Don't wear fluffy things around the neck. Let the neck finishing be as flat as possible.

The stout woman who dresses to her figure rather than to fashionable models is always more charmingly gowned than she who wears what is fashionable in itself rather than what is suitable.

TO SET COLORS.

It is impossible to tell whether a color is fast before washing, but by far the safest plan is to "set the colors" before it goes to the tub for the first time. One of the best methods of setting delicate colors consists in simply making a strong brine of cold water and salt and soaking the garment from twelve to twenty-four hours. Of course this should be done just before going to the laundry, and the salt should not be allowed to dry in it.

This is especially good for all shades of pink and green, and colors once set this way will be bright as long as it would be reasonable to expect it. A strong solution of alum and water is good, particularly with blues and the more delicate shades of brown, but its effect is not so lasting as that of salt, and it is sometimes necessary to renew the bath after the first three or four washings.

WITH THE COOKS.

Chicken With Macaroni—Cut a cold boiled chicken into small pieces; put a layer of boiled macaroni, broken into short lengths, in the bottom of a baking dish, and over this put a layer of thick cream sauce with bits of cheese sprinkled over it, then a layer of the chicken and so on until the dish is full, having sauce, sprinkled with bread crumbs, on top. Bake in a moderate oven and brown on top. About one pint of sauce will be needed.

Green Tomato Pie—Peel and slice a sufficient number of green tomatoes to fill the pie. To four tablespoonfuls of vinegar add one-half tablespoonful of sugar and enough nutmeg to flavor. Pour this mixture over the tomatoes and put on the upper crust. Bake very slowly. If the tomatoes are stewed first there will be no danger of having the pie too juicy.

Carrots and Turnips.—A very palatable dinner dish is made of these vegetables combined. Boil both until tender, mash the turnips and cut the carrots into dice. Mix both together and season with butter, salt and pepper.

Canned Corn—As this is the best canned corn recipe that I have ever owned and tried I will send it along, hoping that some other sister will enjoy it. Corn canned by this recipe keeps well and only needs the addition of pepper and butter or cream. Go

KANSAS CITY, MO.

J. F. Spalding, A. M., Pres

to a good, reliable druggist and have this prescription filled, salt and all: Salicylic acid, 5 drams; sulphate of soda, 84 grains; salt, 5 ounces. Dissolve this in one-half gallon of warm water. (This will do for four gallons of corn.) Cut corn from cob and to every gallon of corn add one cup of sugar. Add this water mixture, mix well and press it down well in glass jars; put rubbers and lids on tight; set in a boiler of cold water, with straw in bottom of boiler, and boil three hours; then tighten the lids again and keep in dark.

SUMMER PUNCH.

Put into your punch bowl a cupful of granulated sugar; add the juice of six lemons and stir until the sugar melts. Put in three peeled lemons, sliced very thin, and leave in the ice until you are ready to use it. Add, then, a dozen sprays of green mint and a quart, at least, of pounded ice. Stir well for a minute and pour from a height into it two or three bottles of imported ginger ale.

JELLY MAKING.

Plums and nectarines are a good combination for jelly. Use half of each variety of fruit. The fruit may be cooked together or separately at one's option. To extract the juice add a little water, then cook slowly until the juice flows freely. Strain through a jelly bag, measure and add three-fourths of a cupful of sugar to each cupful of juice. Boil fifteen minutes and pour into heated jelly glasses.

Equal parts of grapes and apples make a well-flavored jelly, nice to serve with game and meats.

In making apple jelly try the effect of the juice and the thin yellow rind of a lemon to each pint of apple juice. Skim out the bits of lemon rind when the jelly is put in glasses. Apple jelly to serve with roast goose or pork is flavored delicately with mint.

Jellies are so rich in sugar that they are protected from bacteria and yeasts, but they must be covered carefully to protect them from mold spores and evaporation. The following methods of covering jellies are all good: Have disks of thick white paper the size of the top of the glass. When the jelly is set, brush the top over with brandy or alcohol. Dip a disk of paper in the spirits and put it on the jelly. If the glasses have covers, put them on. If there are no covers, cut disks of paper about half an inch in diameter larger than the top of the glass. Beat together the white of one egg and a tablespoonful of cold water. Wet the paper covers with this mixture and put over the glass, pressing down the sides well to make them stick to the glass, or the covers may be dipped in olive oil and be tied on the glasses, but they must be cut a little larger than when the white of egg is used.

A thick coating of paraffin makes a good cover, but not quite so safe as the paper dipped in brandy or alcohol, because the spirits destroy any mold spores that may happen to rest on the jelly. If such spores

are covered with the paraffin they may develop under it. However, the paper wet with spirits could be put on first and the paraffin poured over it.

If paraffin is used, break it into pieces and put in a cup. Set the cup in a pan of warm water on the back of the stove. In a few moments it will be melted enough to cover the jelly. Have the coating about one-fourth of an inch thick. In cooling the paraffin contracts and if the layer is very thin it will crack and leave a portion of the jelly exposed.

AMONG OURSELVES.

Is Mrs. McKelvie to win the prize? It begins to look that way. Of the letters bearing upon the questions she proposed I have chosen two for this

week. Aunt Ellen addresses herself rather to Mr. Young's reply than to Mrs. McKerie's questions, but her letter is an indirect reply, and a forceful one at that. "Country Gentleman" goes at the matter in a different way—a somewhat astonishing way, when his age is considered. And now you shall hear them both:

Mr. J. B. Young did not answer Mrs. McKerie's question, but gave it the clinch by saying that he thinks the faults of many men are due to their training, and as most men have been trained by some woman, who is to blame? He handles this old saw well and just as he has heard it, but it seems to lack a just and generous thought on his part. If the Creator of the human family had thought it just as well for offspring to be born and reared by one parent He could have planned it so, but His plan was for two parents for every child—"male and female created He them"—and there is equal need that both teach by example and precept all of the children born to them. They must if they desire the best of men and women in their own home and the homes they will make for themselves. Evidently Mr. Young believes in obedience of children to a certain extent, but he says the boy is snubbed when he runs into the house with muddy feet, and is noisy on rainy days, or any other days. I say no boy or girl ought to be allowed to do such things, both for their own good and for the comfort of those by whom they are surrounded, for if allowed to act in such a disrespectful manner they will never become manly men or womanly women. Children must be taught self-restraint, with which comes self-respect and consequent respect for others. If parents do not wish to have their boys running in questionable places and company, they should not set the example nor allow it in childhood, when one can have them do as one likes. Every person knows that if habit is once formed it becomes a part of character. When fathers will love their son's welfare well enough to give them the same thought and care that they freely give the personal habits, clubs and lodges, which take much of their earnings and many of their nights, when they cease to leave all responsibility to the wife who is giving her best for the good of the child that she loves and would succeed better with had she the help of the husband and father, when the time comes that the husband can see that fifty cents of every dollar of their mutual earnings is as much hers as his, and that she is as much entitled to the use of her earnings as he, while they both live and that she should have by law the same privilege of control and use of all left after his death that he has after her death, when, in fact, we have equality of the sexes, then the old traditions with the fling, "It is only a woman," will pass away and with it the arrogance and selfishness of man. You say that the millennium will come first. If so, let it come. Meanwhile we will continue to labor for more thought on this serious subject.

I thought you might welcome a new member Among Ourselves. First, I will tell you who I am—the son of an old member who used to write as "Celeste." Some of the elder members may remember her letter about a certain washing machine. She didn't hear the last about that for nearly two years. The washer is almost worn out now, after nearly six years of family work, and we are going to get another. Celeste is alive and well, with us three children—myself aged fourteen and two girls aged five and one. My purpose in coming among you was my being interested in some topics you discuss. I suppose Mrs. McKerie is patiently waiting for someone to answer her. I have in mind two people who used to be our neighbors. One of these was a man who used to leave home about 5 o'clock p. m., go to town, get with boon companions and carouse for some ten or twelve hours, his horses waiting outside the door, sometimes tied and sometimes not, as the case might be. Now, the other person I speak of was a woman. She used to go to town every Saturday to see who was there, on Thursday to attend a certain society, and once or twice through the week to do trading. This woman didn't do enough sewing to keep a spider awake, but spent her husband's hard-earned cash for that. I say her husband's because he was the one that earned it. Now, the question is (for Mrs. McKerie and others Among Ourselves to decide), which of these two people is to be blamed the most? There is, however, a large class of each kind. Another of the sisters spoke about the bellowing herd issuing from the town school. It is noticeable when the crowd from the school in a near-by town comes to the first street corner the country scholars separate and go quietly down a back street, while residents in town surge on towards the postoffice with shouts of "Say, Bill, who frowed that 'ere corn cob?" etc. On the other hand country children are apt to go to the other extreme, for some will hardly answer when spoken to. This extreme is preferable, I think. This is the glorious Fourth with but one celebration within ten miles, and that a money-making scheme. For us we can eat our ice cream and drink our lemonade at home.

For the benefit of new members let

me explain that Celeste innocently wrote praising a washing machine which she had bought for quite a small sum—a dollar or two, if I remember—and that straightway I was deluged with requests to give the name of the machine. This I could not do—I did not know it—but I forwarded the letters and poor Celeste was kept busy for weeks answering them. It occurs to me that this notice will bring other inquiries, so to save Celeste I'll find out the name of the machine and be prepared to give it to all comers.

"A Mother" comes in response to a request for suggestions regarding the vacation dress of little girls. After her we shall have something from Mrs. Os-theimer:

Some mother asks how to dress little girls neatly during vacations and not have too much washing. Dark pink calicoes are fine; so are blues and reds. Make an under waist with two rows of buttons on the bottom, the upper row of buttons two inches above the lower. Button the drawers on the lower buttons and the under skirt on the upper buttons. I see many little girls with colored panties, but I used white with a narrow crochet or Hamburg lace on the bottom. These were easy to wash and iron. Each little girl had seven pairs, but seldom used more than three pairs in a week, and then they were not much soiled. The under skirt should be of outing flannel with very little white in stripe or figure. These skirts need no starch or particular ironing. Over these garments put a princess dress or mother Hubbard; I prefer the princess because the Hubbard sags in front as the children stoop in their play. Use no ruffles; if you must trim, do it with braid or a briar stitch. The addition of a long sleeved and long skirted apron will keep a child comfortable during cold or damp mornings. I starch calico or gingham garments. They keep clean twice as long as unstarched ones do and well pay for the extra ironing. Some very small girls are naturally very neat; others the reverse, but the worst can be taught to care for their clothing. Dirty hands make dirty clothes. An old towel ought to be in a convenient spot for the children to wipe soiled fingers on. It is all the better if they have a wash dish in their reach, but I would not allow soap unless I had plenty to waste. Don't rebuke at bed time because the clothing is soiled, but rather give praise for the care that has been taken, and point out the way to keep clean. I know a four-year-old girl who has ten ruffled and tucked dresses in every week's wash; her little friend across the street has one white dress and two gingham. I see no difference in their happiness.

A "Lover of God's Out-of-Doors" has aroused me, and I have been thinking of writing, but so many subjects have been discussed this spring and all thrashed out clean from the chaff that there was nothing left for me to say. Well, as we live in a corner of the timber I suppose I ought to tell you of shady paths, huge shade trees and the river, but I am going to speak of something every one can enjoy that walks or drives along a highway in June—white clover, fragrant, beautiful and so friendly. Why, it will even push up its bright green leaves right in the middle of the flower beds. A handful of the fragrant blossoms placed in water and in the midst of the dinner table awakens an appetite, and how good are the delicious whiffs that greet one when riding along the highway or just plain walking. Now, as I have given the poetry of the letter, as it were, I will come to the prose or practical part, and that is, well, don't say horror! but it is only chicken mites, and they are mighty. I have hesitated on giving my plan, but after using it for two years, and it has proven satisfactory, I will give it: When we wash, which is usually Monday, we remove our roosts, which are 2x4's planed smooth and sawed so that they are two inches square (these are rested in sockets on cross pieces, and easily removed), place them out-doors and scrub them with the hot suds, using an old broom. The suds kills lice and mites if there is any concentrated lye in the water, and if you use soft water just buy a can and add some to the water. While the roosts are out-doors clean out the droppings, rake them up with a hoe and take the scoop shovel and throw them into the wheelbarrow or bushel basket and carry away. Then take the remainder of the suds and the old broom and scrub the cross pieces that hold the roosting bars and the sides of the house where there would likely be any cracks for them to hide in. Use a good lice powder in nests and burn all old straw from nests every once in a while.

Mrs. C. Schwarz, of Hinton, Okla., has two dozen free-stone peach seedlings which she wishes to graft. Who will explain the process?

er the collar should be made separate so that it may be worn or omitted at will. This arrangement also permits one to vary the collar according to the occasion on which it is worn, a dainty collar of lace or sheer material trimmed with embroidery or lace giving an allowable dressy touch if occasion suggests it. Other features may be varied as one's taste may dictate. When a medium low neck is desired the shield and band collar may be omitted, or simply omit the band collar and round out the neck of the shield. The pattern provides for either long or short sleeves, but it is well to provide the deep cuffs to be worn at will, for there will be occasions for these

with the ordinary sailor blouse. The fronts of the waist are gathered and joined to a yoke, the back being in one piece, having slight fullness at the waist line. Any of the usual outing fabrics or wash fabrics are suitable for such waists, and any mode

[5362—Chemise Night Gown, 35, 36 and 40 bust.]

of skirt may be worn with such. No. 5375 is cut in sizes for a 32, 34, 36, 38 and 40-inch bust measure.

No. 5362 pictures an exceedingly nobby and summery night dress, and one that while appearing very elaborate is of the simplest make. The body of this gown consists of front and back only, each of these being in one piece, the fullness at the neck being adjusted by means of ribbons that are drawn to fit as closely at the neck as one may choose. The garment is to be slipped on and off over the head, so needs no buttons or button holes. The sleeves are to be made rounded or pointed about the edge, or they may be lengthened and adjusted by means of ribbons or wristbands. As shown they are simply caught together on the outside with ribbon fastenings. The trimming pictured is of val lace insertion and edging, the insertion being applied in a pattern that is indicated on the pattern. Other modes of trimming may be used instead. The pattern is cut in three sizes only, these being for 32, 36 and 40-inch bust measure. Variations for other sizes are easily made in such loose-fitting garments.

Send eleven cents in money (not stamps) for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

THE IOWA LIMITED.

The Rock Island lines showed a great deal of tact and cleverness in naming their new "Fast Express" to Chicago "The Iowa Limited."

This train places the Rock Island competitors in the "back row" and is Des Moines' "pet train."

Leaves Des Moines 10:55 p. m., arrives Chicago 8:15 a. m. On the return leaves Chicago 10:00 p. m., arrives Des Moines 7:00 a. m.

The equipment is superb—new coaches and chair cars, Pullman's latest sleepers and mission style diners—electric lighted. While on the subject of trains we must mention the other good trains.

The Chicago local leaves Des Moines at 6:47 a. m. and arrives in Chicago at 7:35 p. m.

The Rocky Mountain Limited leaves Des Moines at 7:50 a. m. and arrives Chicago at 5:15 p. m.

The Colorado Fast Mail leaves Des Moines at 12:40 noon and arrives Chicago at 10:25 p. m.

The Chicago Express leaves Des Moines at 6:25 p. m. and arrives Chicago at 7:00 a. m. The Eastern Express leaves Des Moines at 9:35 p. m. and arrives Chicago at 7:17 a. m.

Coming back from Chicago it is just as you desire it.

Leave Chicago.	Arrives Des Moines.
7:30 a. m.	9:00 p. m.
8:30 a. m.	6:00 p. m.
10:00 p. m.	7:00 a. m.
10:32 p. m.	9:00 a. m.
11:30 p. m.	11:00 a. m.
2:15 a. m.	11:00 a. m.

The arrangement for sleeper Chicago to Des Moines on "Fast Mail" train leaving Chicago at 2:15 a. m. is especially made for those who desire to take in the theater and get home before noon the next day. The sleeper is open for occupancy at 10 p. m.

There is nothing too good for Des Moines people and the Rock Island lines are surely giving them what they want.

THE INTERNATIONAL SUNDAY-SCHOOL LESSON

Third Quarter. Lesson VII. Luke XV, 11-32. Aug 12, 1906.

The Parable of the Two Sons.

A son in a noble and wealthy family, chafing under parental restraint, or having exhausted local means of dissipation and sighing for fresh fields of voluptuous conquest, inconsiderately requests an ante-mortem division of the estate. The indulgent father makes it. Perhaps he has no recourse; parental authority is at an end. The son's heart is callous to the appeal of love; sin has indurated him. The guileless youth, the father's pride and joy, has grown the gruff, defiant rebel to whom the amenities of home are insufferable.

In the shortest time possible the infatuated youth tucked the sparkling gems and golden bars, his patrimony in portable form, easily convertible into coin of any country, in the pockets of a money-belt, and, strapping it about his person, he went abroad—perhaps without even a ceremonious farewell.

He wasted his substance. He tossed it in the air (as per derivative) as the father does his wheat when he will separate it from the chaff. He lived dissolutely. He was insalvable (as per derivative) while his infatuation lasted. The coincidence of the devoured (literally) patrimony and the universal and extreme famine puts a pathetic touch to the sorry plight of the dissolute spendthrift. He was left behind (as per derivative) in the race. He never, in spite of his infatuated effort and extravagance, so much as reached the glittering goal of his wanton ambition. The gay, reveling party that kept him company while his means held out, swept past him thanklessly and disdainfully when his once plethoric purse was at last empty. He awoke as from a dream—alone! penniless!

With the pertinacity of despair he glued (literally) himself to a foreign land-owner, whom in his prosperity he would have dubbed a "Gentile dog"—with whom he would have had no intercourse, much less receive a favor from him. In his despair he cleaves to the foreigner so tenaciously that he cannot be shaken off. A superlatively disgusting and degrading task is given him—offensive to all the senses, repugnant to all the ideas of ceremonial cleanliness instilled in his mind from boyhood.

So sharp were the pangs of hunger that he kept coveting the swine their feed—the locust pods he threw down before them. What humiliation, sorrow, despair are compressed in the half-dozen words—"And no man gave unto him."

At last the hypnotic spell of sin is broken. Self-consciousness, self-control are regained. Memory paints the ancestral home. The flown blessing brightens. What abundance, comfort, care, there extends to the most abject menial! The veriest scullion has such a superabundance that he can pose as a benefactor before the tramp.

"I will!" What a battle royal has preceded and made possible those talismanic words! Fear, shame, pride have been met and conquered. "I have sinned" is the correlate of "I will arise." Confession absolute and frank, without apology or plea in abatement, shall be made. The penalty and consequences of apostasy, disinheritance, servitude instead of sonship, shall be assumed without a syllable of complaint.

It is done. But how different the sequel from that which the prodigal anticipated! He is met long before he can reach the door where he expected to make his confession and prefer his modest request. The father's compassion, how admirable! Kiss of reconciliation, how sweet! The first robe, richly dyed and embroidered, is cast about the bare and sun-burned shoulders. The signet of rank is placed upon the wan finger. Bare feet, mark of servitude, are shod with the sandals of a free man. Now follows the joyous banquet.

The murmuring Pharisees cannot but see themselves portrayed in the elder son, with his ill-formed, ill-natured protest. The true Messiah had come to heal the sick, raise the dead, find the

lost. Will the hale, the unstrayed, those who do not need his kindly offices, begrudge them to their brothers, whose plight is so pitiable and desperate? The climax is reached, the plea unanswerable.

Analysis and Key.

1. The "Pearl of Parables." Primary object: Intended to justify Jesus' attitude toward publicans and sinners. Pictures renegades objects of Divine compassion.

2. Secondary object: To picture sin as a revolt against the beneficent father.

3. Incidental lessons. Freedom of the will. Folly of sin. Unsatisfying nature. Desperate consequences. Evangelical penitence. Discriminated from legal. The process and course of recovery. The Divine Compassion.

The Teacher's Lantern.

The primary use of the parable of the Prodigal Son must not be lost sight of in its evangelical and modern applications. By it Jesus sought to justify His kindly and familiar bearing towards publicans and sinners, at which the Pharisees and scribes were so outraged. He showed the veriest renegade of Israel as still the object of Divine compassion, his restoration possible—a thing He earnestly sought.

In its universal, gospel application this "pearl of parables" pictures sin as a revolt against a beneficent Heavenly Father, whose law is right and just and good.

Here is mirrored the freedom of the will. The son had his own way. He is not let or hindered, except by the pleadings of love and its faithful warnings.

The folly of sin has no more startling exemplification. True as startling;

drawn to life! How swift the "descensus Averno!" How soon the fool and his money are parted! How irrevocable the last estate! Remediless! In the mire with swine!

Who shall ever number the sinners to whom this parable has been the "open sesame" to a new life? Blessed be the day in which it was spoken! "I will arise!" "Father, I have sinned!" The Heavenly Father meets the returning prodigal in the way.

"Lost!" "Dead!" Here is no minifying of the prodigal's fallen state. Lost to God; lost to heaven; dead in trespasses and sins!

The far country is not a matter of geography. It is expressive of estrangement, of alienation from God.

The prodigal's theology was bad, though it showed well the strength of his compunction. It would be impossible for him to ever be his father's hired servant. He is son or nothing.

Solomon is the example for all time. Here the penitent is strictly orthodox. The turpitude of sin consists in this, that it is done against God. Judah's penitent king knew this when he cried, "Against Thee, Thee only, have I sinned!" With this truth Joseph armed the angels of God.

Solomon is the example for all time of the unsatisfying nature of sin. He drank every cup of joy, heard every trumpet of fame; drank early, deeply drank; drank drafts. That common millions might have quenched; then died. Of thirst, because there was no more to drink.

Hear his dying protestations of the inadequacy of the sensuous world to satisfy an immortal: "Vanity of vanities, all is vanity!"

Joy in heaven—that is the measure of the sinner's peril. Were sin a mere episode, a passing incident, a dilemma, extrication from which is easy, there would be nothing in that to set the joy-bells of the skies a-ringing. It is because the sinner stands on the crumbling edge of hell, on the brink of the lake that burneth with fire, where their worm dieth not and their fire is not quenched; because he stands where there is no eye to pity, no arm to deliver, except the eye and arm divine; snatched as a brand from the burning—it is because of that there is joy in the presence of himself when he cries, "How can I commit this sin against my God?"

YOU CAN BUY ON CREDIT

THE ENGLEWOOD COMPANY, Consolidated Factories, Dept. 917, CHICAGO, ILL.

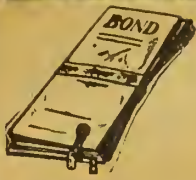

TWO ENGINES FOR SALE

One twelve-horse "Standard" gasoline and one thirty-horse Frost automatic steam engine, both in A1 condition and will be sold at a bargain. The gasoline engine is complete with all accessories, including one fifty-gallon gasoline tank, one large water circulating tank, one burner tank, one Bunson burner, one exhaust box, spark plug, spark coil and switch, six-cell battery, wire, etc.; also a complete set of sight feed oilers. This engine is adapted for every purpose where power is required. The gasoline is pumped automatically and controlled by a needle valve, the surplus gasoline returning by gravity to the supply tank. A sight feed shows the operator the amount of gasoline supplied at all times. The governor is of the ball pattern, providing positive control and uniform speed. The speed may be varied from twenty-five to fifty revolutions without stopping the engine for adjustment. This engine is practically new and in first-class condition in every way; was built by the Des Moines Gas Engine & Electric Co., Des Moines, Iowa, from whom parts and supplies may be obtained at any time. The steam engine is a Frost, automatic, side crank, 8x13, left hand, rated thirty horse power, speed 250 revolutions per minute. Fly-wheel drive, 48x10; three-inch throttle; out-board bearing with adjustable sole plate. This engine is in prime condition, will operate on a 2 per cent variation and would be suitable for belted generator or any other service where steam power can be employed. Also

one Austin three and one-half inch steam and oil Separator, which could be used to advantage and will soon save its cost in connection with the above engine. Address for price and full particulars,

Homestead Co., Des Moines, Iowa

ACRE BONDS

There is Only One Crop of Land—There Will Never Be Another

ACRE BONDS Offer You the Best Opportunity to Buy FARM LANDS BECAUSE

You can buy just as little or just as much land as you wish—paying for it from one acre to one hundred acres at a time. You can pay for it just as it suits you—in any amounts—small or large—daily—weekly—monthly or yearly. You can pay \$10 per week or \$10 per year—just as you want to pay. You can pay at regular periods or at irregular periods. You can stop payments at any time, or you can continue them as long as you desire.

You can begin buying a farm now and accumulate it acre by acre instead of having to wait until you can contract to buy 40, 80 or 100 acres.

BEGIN BUYING A FARM TODAY.

ACRE BONDS Offer You the Best Savings and Investment Plan BECAUSE

They are at all times and under all conditions absolutely safe. No failure can affect your security. **THE LAND CANNOT FAIL. BANKS CAN.** Your money is drawing 5% interest for three years and your security—the land—is steadily increasing in value every month. You can invest your money in whatever amounts and at whatever times you find most convenient. The largest fortunes have been built upon real estate investments. When you deposit \$10 in a bank you receive only a memorandum in your book. When you invest \$10 under our plan you receive a bond on one acre of good Minnesota land—and that acre is held in trust for you by the Minneapolis Trust Co.

Begin Saving and Investing Your Money Today.

How This Plan Differs From Buying Land on Installment Payment Plans—and Why It Is Better.

Suppose you want to buy a farm of forty acres, and you want to pay for it at the rate of ten dollars per month. Under the old installment plan you would enter into a contract to buy the 40 acres. You would begin making payments—but you would **NOT OWN ANY LAND** until you had paid for the entire 40 acres. If, for any reason you could not keep up your payments you would lose whatever you had paid in.

Now, under our plan—the **ACRE BOND PLAN**—you would **not** enter into a contract. You would begin paying \$10 monthly or any other way. And every time you paid \$10 you would receive **A BOND ON ONE ACRE OF LAND**—and that bond would at once begin earning you 5% interest. When you had made 10 payments you could (if you wish) exchange them for a **WARRANTY DEED TO 10 acres of land**. That land would **BELONG TO YOU**. Then you would accumulate 10 acres more in the same way—and so on until you had your 40. While you are buying it you are running no risk of losing a dollar. You can stop payments any minute. You still have your bonds or your land. There are no forfeits of payments already made. In other words you **GET YOUR MONEY'S WORTH FOR EVERY PAYMENT**.

ON THE ACRE BOND PLAN YOU CAN NOT LOSE.

On the Installment Payment Plan You Lose All You Pay In Unless You Are Able to Continue Paying to the End.

THE ACRE BOND PLAN IN A NUTSHELL

We have set aside 3,000 acres of our Choicest Minnesota Lands—**Good Lands**—every acre of them.

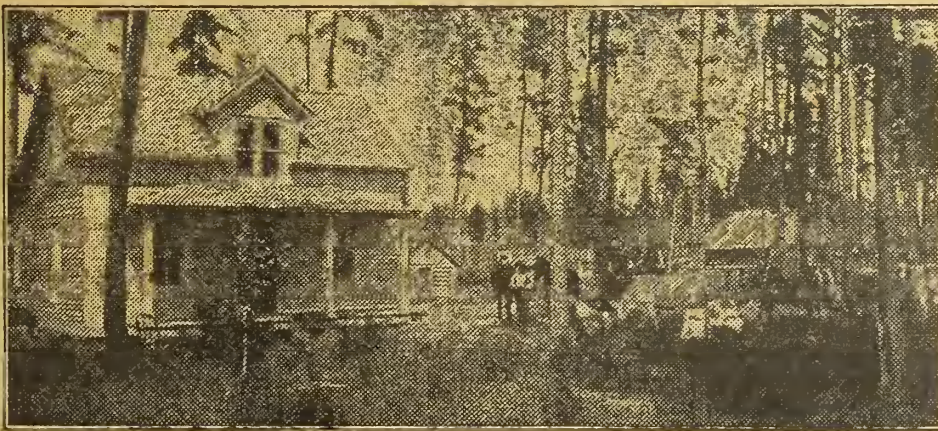

This tract of 3,000 acres has been placed in the hands of the Minneapolis Trust Company, as a matter of further securing the investor. Each acre has been **BONDED** for exactly its present value, which is ten dollars. You may buy just as few or just as many of these bonds as you want. For every \$10 you pay you will receive **A BOND** on one acre of land. When you have ten bonds or more you can either exchange them for a deed to an equal number of acres of land—in tracts of 10 acres—or you can continue to hold the bonds and draw 5% interest on them for three years. The land itself is your security.

There are no forfeits—you are not bound to any certain number of payments, nor to any certain amount.

We have valuable and instructive booklets, maps, photographs, etc., etc., which we will send you entirely free if you will write to us for them. We do not expect to be able to supply the demand for these acre bonds for more than thirty days upon the terms we are now offering them, so you will do well to fill out the coupon and mail it to us today. Better still, send your first payment and begin buying a farm.

A HOME ON BENNER'S LANDS.

THE LANDS

are the choicest Minnesota cut over lands. They **must** be fertile or they could never have been covered with forests as they once were.

They are located in Cass County, (send to us for a map) 25 miles from the city of Brainerd. Railroads run all about and through them. **No swamp lands.** Nothing but real soil, suitable for profitable farming. Fairly well settled already—and more coming every day. We prefer for you to come and **look the lands over**. But as there are many who cannot come at once we have arrangements to describe and picture to you just what we have. If you have friends in Minneapolis, ask them to pick out your land for you, or ask them what kind of land we have. Our booklets, which

we send you free tell you all about the farms, what is raised, how much and what kind of grain is grown on our lands and give you lots of other valuable information.

FARM WANTED.

I WANT a highly improved Iowa or Illinois farm
worth from twenty to thirty thousand dollars in
exchange as part payment for a large well watered
central Missouri stock and grain farm on navigable
river, 5 miles from Rock Island railroad, midway be-
tween St. Louis and Kansas City, containing 1,900
acres. Present price is \$25 per acre. This property
is capable of great development. If interested de-
scribe fully and address,
A. S. LOOMIS,
909 CHESTNUT ST., ST. LOUIS, MO.

MISSOURI 28 MILES FROM KANSAS CITY

160 ACRES in Jackson County, Mo., and one of
the best farms in the state, with a 7-room
house, and other good improvements, orchard, etc.
All level land, black limestone soil. Must sell. Price
\$35.00 per acre. For photographs, descriptions and
full particulars, see
A. J. JONES & CO., PLEASANT HILL, MO.

TEXAS LANDS.

WE WANT a reliable influential farmer in every
community to act as our agent for the sale of
Texas lands. We own 350,000 acres of the best lands in
Texas. For sale on easy terms. Write us for particulars.
Snyder & Yutz, Dwight Bldg. Kansas City, Mo.

MISSOURI LAND

IS BETTER at present prices than a gold mine. Come and we will take pleasure in showing you. 509 acres
well improved, all kinds of fruit and the best of water, and the low price of \$40 per acre buys it. 220
acres three-fourths of mile to Kirksville. As good prairie land as you will find in Missouri. Fair improve-
ments. This is an ideal lying farm and \$65 per acre buys it. 80 acres, 2 miles from Kirksville, nice im-
provement, a lovely small home at the slaughter price of \$60 per acre. 82 acres, one-fourth mile to Kirks-
ville, good improvements and as near an ideal home in every respect as can be found, and we are only ask-
ing \$90 per acre for it. 132 acres one-half mile to Kirksville, good improvements, all kinds of fruit, no bet-
ter land in the state, every foot can be farmed with any kind of machinery. This looks good to anybody,
but it is better than it looks and we are putting the low price of \$40 on this ideal home. 180 acres, 90 rods to
Kirksville, good building, good fence, all kinds of fruit, the best of water and worlds of it, cistern in house,
in fact, everything is right. No better or finer lying land in the state. \$70 per acre will buy this home.

ISAAC A. NOVINGER & SONS, KIRKSVILLE, ADAIR COUNTY, MO.

P. S. WE are not real estate dealers, we own the land herein described and furthermore our home is not
for sale. We simply have more than we can handle.

WE BUILD YOU A HOUSE FREE OF CHARGE

and sell you fertile land at a low price and on easy terms,
within 25 miles of St. Paul and Minneapolis. This is the greatest
proposition ever made to readers of this paper. You have your
choice of 40 acres or more out of two million acres of the splendid
lands of Northwestern Wisconsin. The price is only \$7. to
\$12. an acre, and to give you a good start we will build
your house on the land. The finest climate in the world, pure soft water, ample rainfall,
fuel for years on your own land, near to the finest markets. This with a FREE HOUSE and
land that will grow the FINEST KIND OF CROPS. What more can you ask! Write TO-DAY
for MAPS and FULL INFORMATION.

FARM LANDS FOR SALE.

THE CHEAPEST AND THE BEST ON THE MARKET.

THESE lands are in southern Minnesota and South
Dakota; in Yellow Medicine county, Minnesota,
and Deuel county, South Dakota, in the fourth tier
of counties north of Iowa. You can raise anything
in these parts that you can raise in northern Iowa.
A good corn and stock country. These lands lie
well, good black soil. Failures unknown in these
parts. Lands for one half the price that you can buy
Iowa lands for. Improved farms from \$30 to \$40 per
acre, wild lands from \$20 to \$30. Why go to North
Dakota and Canada and pay practically the same for
those lands that you would pay us? Buy your round
trip tickets to Gary, South Dakota, over the C. & N.
W. Ry., take receipt, bring the same to us, we will re-
fund your fare on any purchase. Excursions every
Tuesday. For full particulars write,
GEORGE W. JOHNSON LANDS COMPANY,
State Bank, Gary, South Dakota.

Kansas. Bluegrass sits in the shade of fine tall
timber and judges herds of fine stock and with Al-
falfa, Clover and Timothy execute the laws of sup-
ply and demand. Special bargains in any sized farm
you want. Write or come today describing what you
want. **S. M. Strawn, Valley Falls, Jefferson Co., Kan.**

Iowa Climate and Crop Bulletin.

The following climate and crop bulle-
tin is issued by the United States De-
partment of Agriculture, Iowa Section,
from the central station at Des Moines,
Iowa, for the week ending Aug. 6, 1906:

The average temperature of the past week
was 2 or 3 degrees above the normal. The
highest temperature reported was 95 degrees
at two stations, but the nights were only
moderately warm. From Monday to Satur-
day morning the rainfall was generally defec-
ient, and many reports from the central
and southern sections gave expression to
fears of damage to corn and other imma-
ture crops. On Saturday night and Sunday
copious showers occurred in the north cen-
tral district, and also in portions of the
southern districts, affording relief from the
prevalent drought. Considerable progress has
been made in harvesting late oats and wheat,
and in thrashing small grain. Corn has
made rapid advancement in all districts, and
damage by "firing" is as yet limited to very
small areas.

Reports received from crop correspondents
of the Iowa Weather and Crop Service, dated
August 1, 1906, show the following averages
of condition of the staple crops:
Corn, 89 per cent; spring wheat, 93; oats,
90; flax, 95; hay, 79; pastures, 83; pota-
toes, 91; apples, 70; grapes, 94.
Last year at corresponding date the esti-
mates were: Corn, 94 per cent; wheat, 93;
oats, 97; flax, 78; potatoes, 82; pastures, 103;
apples, 40; grapes, 91.

OUR SHEEP DEPARTMENT

This department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep to this office.

HOT WEATHER MEAT.

It is strange that while English people and those of western Europe have a liking for mutton that Americans do not, as a nation, take kindly to it. In thousands of homes on farms and in cities mutton is unknown. Beef and pork supply the tables. Some of this is probably due to a prejudice and yet there is no reasonable excuse for such prejudice. Mutton is the most nutritious meat known and it is scarcely necessary to say more.

No other meat can take the place of mutton in warm weather; that is, the fresh article. We would not say one word against the use of smoked hams and bacon for summer use where mutton is unobtainable, but we do say that where mutton can be substituted for salted meats it should be done. Moreover the sheep is not out of reach of all who desire to add mutton to the list of summer meats.

Next to chicken, sheep may be most easily dressed as needed and one sheep will furnish just about enough meat for the average family until it can be used up before spoiling. We have been practicing slaughtering the first thing in the morning. In the hottest weather, we select smaller sheep or lambs, and when the weather is more favorable for keeping we kill large sheep. As soon as they are dressed they can be placed in a refrigerator box or hung in a deep well, where they will keep until they can be used.

It is a common practice in some localities for farmers to "quarter round," which means that one farmer will kill a sheep and send three quarters to neighbors who, in turn will dress a sheep and do the same thing. Nothing will take the place of sheep for this purpose. Size being the first good quality, then comes the merit of mutton as a summer meat which is well up in the scale, perhaps next to chicken.

In dressing mutton we prevent the "sheepy taste" by doing the work very rapidly and cooling the entrails by filling the carcass with cold water as soon as killed. This is done to arrest the generation of gas that begins as soon as life leaves the sheep. Where work can be done in a rapid manner, this may not be necessary, but we have found that the meat is much sweeter on account of this practice and for that reason we keep it up.

SHADE FOR SHEEP.

In the central West sheep will need shade. There is need of sunshine, but when the temperature in addition gets very high the sheep will seek shade. A sheep that will seek shade even when hungry is doing a wise thing. This shade may be supplied by groves or hedges, or it may be in the barn. We have a dark apartment in one of our barns in which sheep can go to seek shade and rest from the attacks of certain kinds of flies which give them trouble. The barn, if well supplied with litter, affords an ideal shade for them and a good deal of manure is saved that would otherwise be piled up in some locality, under a tree or in a fence corner, where it is not needed or where it is likely to go to

CLOVER HILL SHROPSHIRE

LEADING FLOCK IN MIDDLE WEST
CHOICE imported rams and ewes personally selected by a member of our firm from the flocks of Nock, Minton, Cooper, Williams and Bultar. Also best of home-breds. The low-down, blocky kind with the best of covering. The "good ones" always for sale. Write or visit us.

CHANDLER BROS., KELLERTON, IOWA

COOPER SHEEP DIP

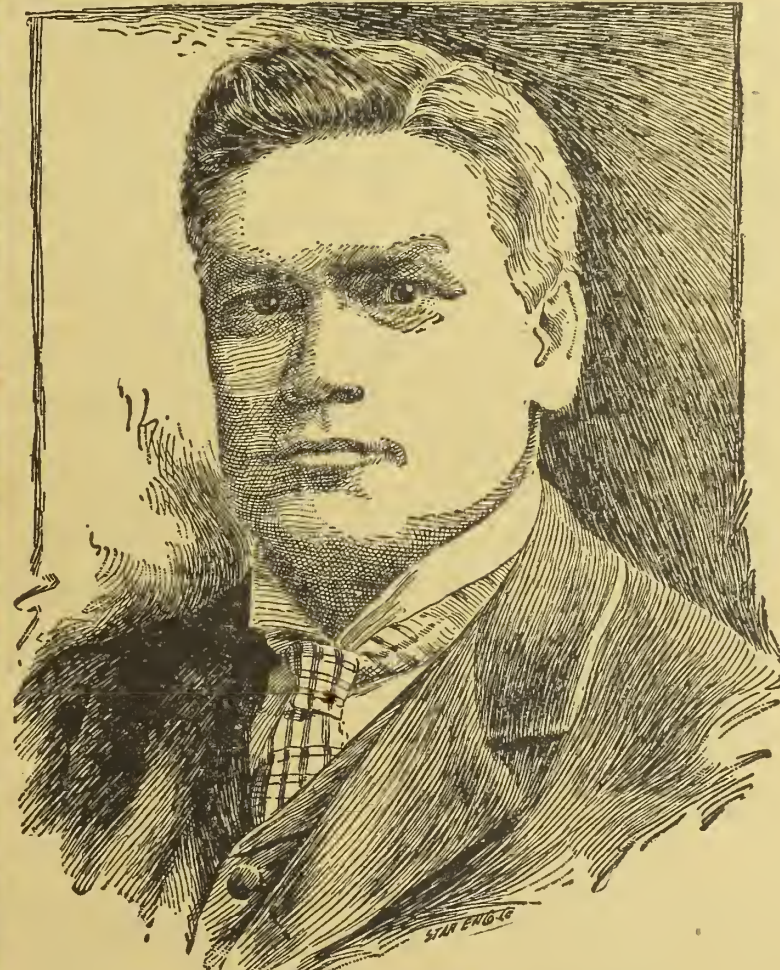

STANDARD OF THE WORLD for 60 years. Used on 250 millions annually. If local druggist cannot supply, send \$1.75 for \$2 (100 gal.) pkt. to WM. COOPER & NEPHEWS, CHICAGO.

GEORGE ALLEN'S FAMOUS HERD SHROPSHIRE

I HAVE a grand bunch of rams for sale, as well as good ewes. My flock has been one of the leading winners in America. Address, GEORGE ALLEN, LEXINGTON, NEB.

IF YOU ARE COMING TO THE STATE FAIR

T. F. WILLIAMS, M. D.,
CONSULTING PHYSICIAN.

FREE TREATMENT COUPON.

Dr. T. F. Williams, 211-218 Crocker Block, Des Moines, Iowa.

Please send me free symptom blanks with a view to my taking your free month's treatment.

Name

Address

ONE MONTH FREE.

I have cured others, I can cure you. Cut out the coupon, write your name plainly and send it to me. I will give you free the benefit of my twenty-five years' experience as a Catarrh Specialist in giving you a correct diagnosis of your case.

WHAT THOSE WHO HAVE TAKEN MY TREATMENT SAY.

Lost Nation, Iowa, April 12, 1906.

Dr. T. F. Williams, Des Moines, Iowa.
I suppose you wondered why I did not answer your letters, but I thought I did not need the treatment any longer. I am letting my system rest from the treatment a while, and if any of the symptoms arise again I will be sure to order more treatment. Your treatment has done a great deal for me and I will not hesitate at any time to recommend it to the afflicted.

Thanking you for your liberal offer, I remain, yours-very truly, Horace B. Hansen.

Des Moines, June 27, 1906.

Dr. T. F. Williams, Des Moines, Iowa.
I have been troubled with CATARRH for many years; have consulted different physicians and taken many different treatments. A few of them relieved me temporarily, but did not receive any lasting benefit from any of them until in January, this year, I was persuaded to take treatments from Dr. T. F. Williams.

I had only taken his treatment for about sixty days until I felt that there was no necessity of continuing the treatment any longer. I was relieved from CATARRHAL trouble almost from the beginning of the treatment.

I voluntarily make the above statement, trusting that some other sufferer will be led to taking treatment from the doctor which has certainly done me a world of good.

Very truly yours,
Mrs. W. M. Hagerman,
825 W. 15th St.,
Des Moines, Iowa.

Enterprise, Iowa, May 28, 1906.

Dr. T. F. Williams, Des Moines, Iowa.
I think this treatment will cure me all right. I will not need any more medicine. I feel lots better than I did before I started to use your medicine. I think your medicine is just the thing you said it was.

Yours very truly, F. H. Hickmen.

Coggon, Iowa, July 9, 1906.

Dr. T. F. Williams, Des Moines, Iowa.
I received your letter and thought I would write back to you and let you know I will not need any more medicine. I cannot praise your medicine enough. I am really cured from CATARRH. Yours truly,

R. R. 1, Coggon, Ia. Mrs. T. Wilson.

Hampton, Iowa, July 9, 1906.

Dr. T. F. Williams, Des Moines, Iowa.
I don't think I will need any more medicine because I feel perfectly well and have plenty left for the inhaler. A while ago, about four weeks, for one week I felt pretty sick, but that was the change, because I got to feel better the next, and kept on getting better all the time and the last two weeks I feel entirely well; so I don't think there is any need of getting any more medicine and of what I have left there shall not be a drop of it wasted. I remain,

Yours truly, Miss Minnie Lemke,
R. F. D. 3, Box 47.

waste. Sheep always prefer darkness as well as shade, which is supplied in a barn better than in the shade of trees.

We have found that sheep will do more or less eating at the racks while in the dark barn in summer if they are filled with good clover or alfalfa. In another part of the barn is an apartment set off for lambs where they may have access to feed all the time. By this means a splendid growth is obtained on the lambs which otherwise would not occur.

At one time we had a straw shed in a pasture where the sheep spent a great deal of time. It was not rain proof, and when too much rain came it became so muddy under this shed that the sheep could not use it, and a better one was constructed for them. We observed how tenaciously some of the sheep stuck to this homely and improvised shelter, even lying in the mud rather than change places for a better one.

CHEAP R. R. RATES VIA M. & ST. L.

Every Tuesday homeseeker round trip tickets to Minnesota, North Dakota and Canadian Northwest, also first and third Tuesdays

to Montana, Washington, etc., at one fare plus \$2.00.

FIELD NOTES.

Ohio Chief, Iowa are for sale by Mr. F. A. Strong, Orient, Iowa.
 Table-backed Herefords are offered for sale by Mr. W. W. Wheeler, Harlan, Iowa.
 Two young Orion boars are for sale by Mr. A. B. Easter & Son, Fremont, Neb.
 Messrs. White Bros., of Perry, Iowa, offer a few choice Aberdeen Angus hells for sale.
 Hereford bulls, and good cows and heifers are offered for sale by Mr. W. L. Dodge, Hubbard, Neb.
 Mr. James T. Dollison, of Sac City, Iowa, offers a couple of young Short-horn bulls for sale very cheap.
 Twenty fall Poland China boars and fifty spring boars are offered for sale by Messrs. Young & Duncan, of Madison, Neb.
 Mr. F. Rabeler, Leigh, Neb., has one of the best Yorkshire herds in America. Choice boars and sows for sale at all times.
 A few good Hereford bulls and some choice cows and heifers are offered for sale by Mr. J. G. Van Seggern, Wisner, Neb.
 Thirty fall Poland China boars and forty-three spring boars are offered for sale by Messrs. Henry Bros., of Le Mars, Iowa.
 The Joe Young herd of Poland Chinas owned by Messrs. Young & Duncan, of Madison, Neb., offer great bargains in fall and spring boars.
 Mr. Fred Massure, of Linden, Iowa, announces on page 10 of this issue that he has pedigreed Scotch collie puppies which he will dispose of at farmers' prices.
 The Clover Wave herd Duroc Jerseys owned by Messrs. Stowe & Gingrich, of Hamburg, Iowa, have some rare bargains in boars this season. Write them for prices or go and see them.
 Mr. Hulbert's Poland China boars—good fall and spring ones—can be bought of Mr. Chas. M. Hulbert, of Oakland, Neb. He has a grand lot of good boars this season and is now ready to ship.
 Announcement is made in our date claim columns by Messrs. J. L. Miller & Sons, of Brooklyn, Iowa, that they will hold public sales of Poland China swine under dates of October 24th and February 6th.
 The home of Big Tou 2d, the 1,000-pound Poland China boar, is where you can get your growthy, big-boned males. Write Dr. H. Pritchard, Wisner, Neb., and tell him just what you want and you will get it.
 Mr. John M. Bixler, of Corning, Iowa, has a few good young Short-horn hells for sale sired by his great breeding bull, Diamond Rex. The latter bull is considered one of the best breeding bulls in the state and the bulls that Mr. Bixler is offering are strictly all right. One of them is a Secret, while

the other has about five Scotch tops. Mr. Bixler would not be averse to trading one of them on an aged Scotch bull. Anyone having one should write Mr. Bixler at once.

Mr. A. T. Sundell, of Paton, Iowa, owner of the Wm. Roberts & Sons herd of Duroc Jerseys, will be at the Iowa State Fair with a grand bunch of fall and spring males. Those interested will do well to look him up.

Messrs. Wm. Ray & Son, of Defiance, Iowa, are offering some good Poland China pigs sired by the noted Iowa State Fair prize-winning boar, Independence. They also have pigs by the great boar, Meddler and Dakota Chief 2d.

Mr. W. F. Pershing, of Limon, Colo., has issued a valuable book on the latest land laws, and is advertising to send it free in his advertisement on page 16 of this issue. He has a large tract of good land for sale cheap.

Mr. Levi Jarvis, of Pingree, N. D., has 640 acres of land that he will sell in a body or will dispose of a half or quarter of it at a bargain for the next thirty days. This farm is situated eight miles west of Pingree. See advertisement on page 16.

The up-to-date Poland China breeder, Mr. Jas. Watson, of Madrid, Iowa, claims February 11th for his spring Poland China sale. Mr. Watson, as breeders of black hogs know, raises the good kind, and his coming sale will not be below his usual standard.

Mr. W. R. Bennethum, of Madrid, Iowa, has as usual a fine lot of Durocs. The outlook this year for this breeder is just as bright as ever. His sale will contain excellent individuals. Mr. Bennethum will show some of his pigs at the state fair.

Mr. A. P. Alsin, of Boone, Iowa, claims October 27th for his fall Duroc sale. At the same time a number of good Short-horns will be sold. His Durocs are up and coming and breeders will find them good ones. Mr. Alsin also claims February 12th for his spring sale of Durocs.

Mr. Dan Needham, of Woodward, Iowa, will hold his annual Poland China sale on February 12th. His crop of pigs are doing nicely, and farmers of this breed will find a nice string to go under the hammer when this sale takes place. The sale announcement will explain it all.

A great bargain in a 240-acre Iowa stock farm is offered by Mr. Frank Bissell, of Dexter, Iowa. This farm is well improved and is only two and one-half miles from town, well fenced and growing good crops. It is on the main-traveled road. Price, only \$60 per acre if taken right away.

Mr. J. B. Davis, of Fairview, Kan., is offering some choice spring pigs. The Durocs raised by Mr. Davis have been well advertised all over the country and the herd has made its reputation on the high-class stock shipped. It will pay you to look up his advertisement on page 27 of this issue.

The announcement of the Still College of Osteopathy, of Des Moines, Iowa, will be found on page 4 of this issue of The Homestead. Readers of The Homestead interested in osteopathy would consult their own interests if they would write to the address given in the advertisement referred to.

On September 20th, Mr. A. F. Russell, of Savannah, Mo., will hold a public sale of Duroc Jersey swine. He will have seventy-five head—thirty-five boars and forty young sows—the tops of 150 head, and he advises us that they are "good ones." He has nothing to offer until the day of the sale.

Mr. F. S. Bennett, of Emporia, Kan., is offering a 240-acre farm for sale in his advertisement on page 16 of this issue. This farm is located within two miles of the county seat; the soil is black loam, all under plow, with good improvements. For price and other information see the advertisement referred to.

Mr. W. S. West, of Hanna City, Ill., breeder of Duroc Jerseys, has an extra good lot of fall pigs which please discriminating buyers. His annual public sale will be held on October 11th and breeders should plan to be present on that day. Write Mr. West for particulars regarding his herd, kindly mentioning The Homestead.

Messrs. Snyder & Yutz, of Kansas City, Mo., a well-known real estate firm, desire an influential farmer in every community to act as their agent in selling Texas lands. It will pay the readers of this paper to read their advertisement on page 16 and then write to them for their proposition. When writing mention this paper.

Mr. W. T. Wattles, of Neligh, Neb., has a section of Antelope county land on which there is a seven-room house, horse barn, cattle sheds, cribs and other improvements which he is offering for sale on page 16 of this issue of The Homestead. The price at which the land can be purchased and other information will be found in the advertisement referred to.

Fisher Live Stock Company, of Hastings, Neb., are now offering as strong a lot of Chester White pigs as they have ever raised on their farms. The crop of spring pigs will number around seventy-five, of which about sixty are sired by the great show hog, Norwood Chief. This animal has proven himself a very strong one and his get are very much of his type. The easy-feeding qualities transmitted into these pigs is only one of the many features of this sire's get. It will pay you to look into this of-

fering of spring pigs. You will find the advertisement on page 25 of this issue. Don't fail to mention The Homestead.

Messrs. Hanks & Bishop, of New London, Iowa, claim January 22, 1907, for their coming spring sale of fancy Durocs. We say the word fancy, for their crop of pigs are highly-bred individuals and will fully substantiate all that this word implies. Their sale announcement will show the kind of breeding and will appear in these columns at the proper time.

Mr. Chas. Van Patten, of Sutton, Neb., is now making good prices on a few very strong pigs sired by his former herd boar, Red Reuben. This herd of spring pigs are very growthy and have a very strong line of ancestry back of them. Mr. Van Patten is also offering some very good fall animals of both sex. Look up the advertisement on page 26.

Mr. C. S. Buckley, of Holstein, Iowa, one of the best-known Berkshire breeders in the state, has about eighty spring pigs sired by Conquest and Benjamin's Faithful. Mr. Buckley has some good pigs among the bunch and will be in position to fill orders later on. He will be at the Sioux City, Iowa, Fair, with a show herd, and will also take a few good Short-horns with him.

Mr. Geo. Regennitter, proprietor of the Rock Creek herd of Poland China swine, of Bennett, Iowa, whose advertisement appears on page 24 of this issue, writes as follows: "The boars I am offering are a choice lot of heavy-boned and well-finished hogs, sired by a grandson of Chief Perfection 2d and out of well-bred dams. I am pricing them very low for quick sale and will not ship any but the best."

On October 12th Mr. A. L. Mason, of Early, Iowa, one of the best-known Short-horn and Poland China breeders in Sac county, will sell thirty-five head of his best cattle and fifteen head of fall boars at his farm near town. There will be a number of good young bulls in the sale and some very useful cows and heifers. He will also sell one Shire stallion and one span of colts, together with ten head of Shropshire rams.

The Moon Land Company, of Colony, Kan., have a 2,560-acre farm, located in eastern Kansas, that belongs to heirs, which must be sold to settle an estate within the next sixty days. They are pricing it at an extraordinarily low price in their advertisement which appears on page 16 of this issue. They also announce the fact that they have smaller bargains in Kansas land. For full particulars address them as above.

The E. E. Etter herd of Durocs, owned at Utica, Neb., are coming along nicely. The owner is a reliable breeder and is well posted on the merits of good Durocs. 2d Surprise Redeemer is a very desirable hog to have at the head of the herd. He is a very good individual, as well as being a good sire. The Etter herd is worthy of your consideration. Write him for prices on good Duroc spring pigs. Look up the advertisement on page 26.

Messrs. R. A. Wiley & Son, of Malcom, Iowa, are placing on the market the Poland China boar, O. R. Standard 87959, sired by Mammoth Standard 6259, dam Lady's Light-foot's Best 19008. He weighs 700 pounds and was a prize winner at the Iowa State Fair in 1904. They also have two good boar pigs for sale sired by O. R. Standard, of March farrow, dam Hazel Perfection 95280. For full particulars read the advertisement on page 24 and address the advertisers as given above.

The season of the year is at hand when a great many Homestead readers are preparing to secure their winter wheat and rye seed for next season's crop. We desire to call the attention of those interested to the new advertisement of Messrs. J. B. Armstrong & Sons, of Shenandoah, Iowa, who are asking readers of The Homestead to send for their descriptive list of what they consider the best wheat and rye that grow. They promise to fill orders true to name and give all their patrons an honest deal.

Mr. A. S. Loomis, of 909 Chestnut St., St. Louis, Mo., announces on page 16 of this issue that he will take a highly-improved farm located either in Iowa or Illinois in part payment for a large Missouri stock and grain plantation consisting of 1,900 acres, which he values at only \$25 per acre. Mr. Loomis considers this a good opportunity for some reader of this paper to sell some high-priced land to a good advantage. After reading the advertisement above referred to, write Mr. Loomis for further particulars, if at all interested.

Mr. W. C. McGavock, of Springfield, Ill., claims October 23d for a public sale of Aberdeen Angus cattle, the property of Messrs. G. E. Thornton, C. E. Bopes and others. The sale will take place at Aledo, Ill. Mr. McGavock says that it is the intention of these breeders to make a very high-class sale, and they will include Blackbirds, Trojan Ericas, Queen Mothers, Lady Idas and other superb representatives of other popular families. Messrs. Geo. Aikins, S. Lee and J. E. Reed will also be consignors, all five of the men named being Mercer county, Ill., breeders.

Messrs. Joseph Skinner & Son, in asking us to announce November 2d as the date for the fall sale of Duroc Jerseys of Welch, Skinner & Son, Bedford, Ia., write: "We are not raising as many pigs as we generally do, but what we have are getting extra care. We have about fifty, and never before at this time of the year have had a more even bunch. They are the get of three richly-bred boars: Billie Golden 37037, Expansion 43349 and Addy's Chief 42615. These young spring boars will bear close inspection when driven into the sale ring on November 2d."

Mr. R. J. Peckham, of Pawnee City, Neb., has one of the good herds of the middle West. The large, roomy type of Poland-bred and raised by the above-named gentleman are always appreciated by the majority of breeders. Mr. Peckham has several very choice sows that were secured direct from the well-known herd owned by Mr. John Blain, of Pawnee City. He is useless to go into details about the type of this herd, as everyone is familiar with the Blain type of Poland. Mr. Peckham secured one of the best sons of the great Blain's Tecumseh and has used him successfully for a number of years. Other boars used in the herd are sired by Johnson's Chief and

some closely related to King Do Do. The Peckham herd is well founded, and the stock secured from this gentleman will prove good for any in need of good, vigorous hogs. The Peckham hogs have won their reputation for large number in litters, with plenty of quality combined. Don't forget to look up the advertisement on page 24 and write him for prices. You will get a square deal, with plenty of bog. Mention The Homestead when writing.

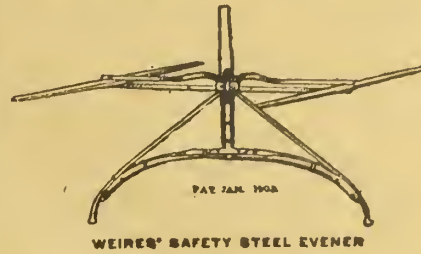

Mr. Frank Alldritt, breeder of Duroc Jersey swine, of Friend, Neb., in sending change for his advertisement found on page 24 of this issue, writes: "I have some ulcc fall gilts by Van's Perfection 11571; also some good fall boars by Van's Perfection and Jumbo Chief 19899. My spring pigs are doing fine. I intend to select forty boar pigs from nine different boars, which I will reserve for my fall sale, October 22d. I will also put in some fine gilts with some sows that have proven their ability as producers. My early pigs weigh from 100 to 130 pounds and will easily reach 200 pounds by sale day. I have one pig by old Higgins' Model and out of a sow by Improver 2d that will be heard from this fall."

Mr. W. T. Frazier, of South Berkeley, Cal., is offering a dairy ranch for sale in his advertisement on page 16 of this issue. This ranch has a seven-room residence, cow and hay barn with room for seventy cows, large horse barn, chicken house, large implement house, two hog houses, large dairy barn, and is fitted with a steam power separator and churn. The land is fenced into fields in each of which is running water for stock, and which is also piped into all the buildings. The land is in first-class condition, so we are advised, and the soil and climate good. The price at which this ranch can be purchased, and other information in regard to it, can be obtained from the advertisement or by communicating with Mr. Frazier at the address given.

The well-known firm of Messrs. Peek & Putnam, of Tecumseh, Neb., are offering some of their high-class Duroc Jersey pigs for sale through our columns. This is one of the good firms of Duroc raisers in Nebraska. They breed the profitable type and get them so the breeder as well as the farmer wants them. The pigs are raised on two separate farms and get the best of care. The herd is headed by Universal Russel and Crimson Gem, a grandson of Crimson Wonder. The sows in the herd represent the blood of Tip Top Notcher, Ohio Chief, Crimson Wonder, Chicago Chief and Top Notcher. The spring pigs are royally bred and have an extra amount of growth. It would pay you to look into this lot of growthy pigs. Write Messrs. Peek & Putnam at Tecumseh. Look up the advertisement on page 26.

Mr. John C. Miller, of Harlan, Iowa, reports the purchase of a good yearling Berkshire boar from the Ardmore Stock Company, of Holstein, Iowa. He calls him Goodfeeder 92831, and he is what his name indicates—a very good one, of extra good feeding quality. He has an extra good, short, broad head; well-dished face; extra thickness and spring of rib, with plenty of length; extra good hams, bone, feet and legs, and very smooth; in short, a very toppy boar. He is sired by St. Patrick of Ardmore 74760, first-prize aged boar at Interstate Fair in 1905, first-prize yearling boar and head of second-prize get of sire group at same fair in 1904, and sire of winners of first and second prize in under a year sow class, first prize produce of sow, first and second-prize boar pigs, and first and second-prize sow pigs at same fair in 1905. The sire of St. Patrick of Ardmore is St. Patrick 60424, first-prize yearling and sweepstakes boar at Iowa State Fair in 1902. From his dam, also, Goodfeeder gets a lot of good show-yard blood. She is Lady Bess of Ardmore 7th 86252 by Ardmore Chief 69886, winner of second prize in yearling boar class at Interstate Fair in 1902, where he was placed second only to the Iowa State Fair champion. Her dam, Lady Bess of Ardmore 61490 is by Columbia's Duke 2d 58731, and out of Lady Bess 52661, who was first in aged sow class at the International in 1901, and one of the third-prize aged herd at same show, first in aged class and sweepstakes sow at Iowa State

Weires' Safety Evener

Made of steel, built to last a lifetime. Absolute safety. Inquire through your local dealer and have one placed on your buggy before muddy roads come on. Look up our exhibit at Iowa State Fair, at Des Moines, August 24-31. It will interest you. If your dealer does not handle the Weires' Safety Evener write to

WEIRES' SAFETY EVENER & MFG. CO.
ALLISON, IOWA.

beautiful trees, and a fine lake. The buildings costing \$125,000, are situated on a high eminence overlooking the city and surrounding country for miles in every direction. Kirksville also has a fine high school and three ward schools, a business college and nine churches, also the American School of Osteopathy with about 700 students and many patients. The floating population of Kirksville is at all times from 1,500 to 2,000 people. Kirksville is not a manufacturing city, although it has a new stacker factory, a carriage factory, an extensive poultry house, a creamery and a large flouring mill. The great Wabash railroad crossing the state from St. Louis to the north, and the Quincy, Omaha and Kansas City (now controlled by the Burlington) from east to west afford excellent facilities to the near markets of St. Louis, Kansas City and Chicago. Kirksville has four well-equipped banks and a new government building which cost \$40,000. Kirksville is surrounded by a great stock and grain country. The farmers are prosperous and contented. The city has a fine system of waterworks, electric lights, gas plant, macadamized streets, sewerage system and efficient fire department. Is it not worth more to live in or near a town with a state college? Your children can get a thorough education and be at home. Is this not worth more than can be expressed in money? Will these lands not advance more rapidly than lands of same fertility away from such a town and college? See advertisement on page 16.

Mr. C. F. Shaffer, breeder of Poland China swine and Short-horn cattle, at Wellman, Iowa, maintains one of the best and finest herds of registered Poland China hogs and Short-horn cattle to be found in southeastern Iowa. "At present," he writes, "I have 112 spring pigs sired by my two great herd boars, Black Chief 99855 and G's Perfection Jr. 89471. These two boars are bred royally, and as individuals have no superiors. Their pigs are the type that attracts attention on sight from the buyer, and already shipments have been made to Michigan, Utah, Nebraska, Wisconsin and South Dakota. In Short-horns there are a number of young bulls, six to ten months old, all reds in color, sired by the prize-winning Cruickshank bull, Laurel Knight 170762. These bulls are of the low-down, beefy type, with well-sprung ribs, good broad backs, with nice head and horn. I am not offering anything in the heifer line for sale this year. My recent sale of sixteen head of Scotch heifers to Mr. John Gruber, Eustis, Neb., makes it impossible for me to spare any

Rosegay, the most popular champion Angus bull ever exhibited in American show yards. Every animal included in the great Gardner dispersion at Galesburg, Ill., on Tuesday, August 14th, is either related to this bull, has calf at side by, or is in calf to a son or grandson.

more for the present. Those wishing to purchase a young bull or a Poland China male pig or a sow pig should not fail to write me for prices and description and pictures of herd boars and herd bull, which are free of application." Mr. Shaffer's advertisement will be found a little later on in The Homestead.

Messrs. E. M. Castle & Son, of Joy, Ill., breeders of Duroc Jerseys, have had very good luck with their pigs this season. A detailed description of their herd will appear in these columns next week. If wanting a good herd header or a good gilt write this firm at once, kindly mentioning The Homestead.

Mr. F. E. Hankins, of Sciota, Ill., breeder of Chester White hogs, has a very good lot of young stock for sale, also two herd boars and an extra good lot of fall boars. In these columns of our next issue we will give full particulars regarding this offering. Write Mr. Hankins at once for prices and descriptions, kindly mentioning The Homestead.

Mr. F. C. Thackaberry, of Tampico, Ill., has an advertisement on page 21 of this issue which should interest breeders of Poland Chinas. He has a very good herd and we will give full particulars regarding it in our next issue. Mr. Thackaberry is also offering some extra good Oxford Down rams for sale from both imported rams and ewes. Watch these columns for further particulars and if wanting something good of either breed write him at once, mentioning The Homestead.

A visit to the Claremont herd of Duroc Jerseys is full of interest to the friends and breeders of the red hog. In looking over this herd one cannot help being impressed with the smoothness of shoulder, the length of body and the strength of bone which characterize this herd. On October 2d the owner, Mr. John Weighton, expects to sell at public sale a fine lot of boars of this type. They are a smooth, growthy bunch showing nice heads and ears, strong backs, heavy bone and good feet and legs. They are richly bred, containing the blood of Ohio Chief, Old Orion, Proud Advance and Improver II. A prospective buyer will do well to attend this sale and secure a good one. If any of our readers want a good Duroc Jersey boar they should correspond with Mr. Weighton at once and he will take pleasure in describing the boars he has on hand. There are a number that breeders will want.

Mr. L. C. Reese, of Prescott, Iowa, one of the best-known breeders in southern Iowa will make a sale of Short-horn cattle, Chester White hogs and Shropshire sheep at his farm near town on October 22d. He will sell twenty-four head of cattle, among which will be some straight Scotch. There will be a good Scotch bull in the sale and some good cows and heifers. The bull referred to is sired by the well-known bull, Vermouth, and is out of Imp. Carnation, the cow that cost Mr. Reese \$300 and is considered to be one of the best cows in the state. He will sell forty head of Chester Whites, every one of which will be sired by or is out of prize-winning stock. He will also sell fifteen head of splendid Shropshire sheep, among which is an imported ewe. He has also used an imported ram in the flock. We will tell our readers all about his offering in due time.
